Hello Roelof,
Thank you for that info. Well I have noticed decodes generally are much more solid using the loop which I find strange becomes the noise floor of Miniwhip and Loop are about the same, perhaps signal strength is higher from the loop.Anyway I will try using my SEM QRM Eliminator and see if that helps.

Best regards,
Mike

Hi Mike and Roalof,

I can confirm Mike's observations regarding the disappearing nulls at night, but only for relatively close-by stations.

For instance,during the day, I can null out completely: Portpatrick (780km), Pinneberg(460km), Rogaland(811km). At night, all stations above are received equally well on both the loop (regardless its orientation), and on the whip.

A possible explanation is as follows: All navtex stations (and most MW BC stations) use vertically polarized antenna systems, so in daytime the nulls will be present for a vertical loop. At night, sky wave propagation will occur, which is horizontally polarized (as several sources on the internet say), so the loop will receive a mixture of both ground/sky wave signals and the nulls will disappear for relatively close-by stations, because the sky wave signal is sufficiently strong on the loop, despite the wrong polarization.

My belief (but I'm still experimenting) is that the nulls are still present at night for stations that can *only* be received by skywave.

Example below for Coruna 1D (1302km) and Istanbul 3D (2133km) fighting each other in the same time slot:

Hello Dirk and Roelof,

Thanks Dirk. I wonder then if a loop in horizontal plane will achieve better nightime results for nulling. I will give it a try later in the week.

Best regards,
Mike

Hello Roberto,

Bjuroclubb is a nice catch from your location at this time of the year.
There are many nights I do not receive it here!

73,
Roelof

Hi Roelof and thanks for your reply.
I'm very happy to ear this from you. Everyday I'm changing something on filters, antenna direction and others, but naturally most helpful for me are tips that you and other members post on the group.
Grazie
73
Roberto

Hi mike,

I'm no expert, but AFAIK a horizontal (full-size) loop will only perform if at least 1/2 wavelength above ground. A small horizontal loop will be even worse and will only receive signals from extremely steep angles.
Regards - Dirk

Hi Dirk,
Thanks for info, I will not go down that path!
Roelof's idea using noise cancelling techniques seems to be the best option, which I will try next week.

Regards, Mike

Hi
Very poor reception last night, maybe due to a new antenna orientation (110°), or bad weather (very bad).
Anyway this is my log:

20130524 2154 518 $01E GNI Niton,ENG 1323
20130524 2234 518 $03P 4XO Haifa,ISR 2279
20130524 2300 518 $01S DDH47 Pinneberg,DEU 1183
20130525 0113 518 $01I SAS Varberg,SWE 1600
20130525 0122 518 $01J SAA Gislovshammar,SWE 1357
20130525 0133 518 $03J LZW Varna,BUL 1188

Hi all,

More loop vs. whip experiments.

Loop was pointing straight N/S; result: the wip catched a long string of messages from Astrakhan. The loop catched absolutely *nothing* at all, proving that deep nulls are present for pure sky wave signals: Astrakhan is at 83 East from my QTH, almost broadside of the loop.

Regards - Dirk

Hello Dirk,

I also received 8 perfect decodes from Astrakhan.

This loop versus whip antenna is interesting!
One question: have you looked at the noise floor of the loop and the whip
on 518 kHz?

73,
Roelof

Hello All,

Re Loops.
I see the problem is having obtained a good null in daytime from a local pest at a range of say 500km, then at nighttime the skywave reduces the effectiveness of this null.

Regards,
Mike

Hello Roelof,

Around 500 KHz, the noise floor of the loop is ~2..3 dB higher than that of the whip and around -122dBm. But the loop is standing ~5 m closer to the house than the whip, so maybe further improvement is possible. (UTP cable was in short supply at the DIY shop and I could only lay hand on 13 meter :0)

I must say I'm impressed by the total absence of QRM-pickup on the UTP cable without any shielding or grounding!

Regards - Dirk

Listening from Boston, MA US area and am interested in what the receiver(R8B) dial frequency should be for M-8000 decoding of 518 frequency?

Hello Dirk,

Regarding the noise floor, which filter bandwidth do you use?

> I must say I'm impressed by the total absence of QRM-pickup on the UTP
> cable without any shielding or grounding!

Before WWII, open feeders were the norm for transporting power from a transmitter to the antenna.
This required a bit of operator skill, so coax was invented which was much easier to use for feeding a dipole.
Local noise was not a problem at the time, I think, so in practice it did not make much of a difference.

With a balanced feedline, common mode problems are non existent as the induced noise voltage is balanced out and does no harm. Furthermore, an antenna fed with balanced line does not need a counterpoise, so this further reduces common mode problems. A longwire e.g. must work against a counterpoise and except when taking special precautions it is always capacitively coupled to the mains wiring. This results in a system that can have all the local noise in series with the antenna, which makes live very hard.

CAT5 is an excellent balanced transmission line cable, which greatly eliminates common mode problems.
As each twisted pair uses a different twisting speed, the coupling between pairs is minimized as well.
As it is good for up to at least 100 MHz in a computer network, it certainly will work at 518 kHz!

(My secret weapon as a ham at HF has been the use of a balanced antenna system with open feeders for over forty year!)

73,
Roelof

Hello Roelof,

RBW was 30.5 Hz for noise floor measurement; I should have mentioned that. Many thanks for the eye-opening explanation on UTP!

Hello all,

Conditions were interesting.
I found a rare decode from Horta, AZR and also two messages from VON, St. Johns, CAN.

When you look at the graph of the Kyoto Dst, you will find that yesterday at 17:00 UTC it was - 49.
At 23:00 UTC it was - 58 and at 00:00 UTC today it was -48. After that it recovered quickly to - 12 and - 19 at respectively 02:00 and 03:00 UTC.

http://wdc.kugi.kyoto-u.ac.jp/dst_realtime/presentmonth/index.html

VON was received at 02:19 and 02:25 UTC, which once more seems to confirm Dirk's findings that Canadian reception can be expected whenthe Kyoto Dst is higher than - 20. This also indicates that propagation improves immediately when the Dst recovers.

Hello Hank,

USB 516.500 will produce a central audio frequency of 1500 Hz.
This should work with any decoder.

Regards -Dirk

Hello Dirk,

My noise levels are almost identical.
In a bandwidth of 30.5 Hz it is -121 dBm on the whip and - 118 dBm on the loop.

This confirms that differences in reception are mainly due to a different location!

73,
Roelof

Hello Hank,

USB 516.500 will produce a central audio frequency of 1500 Hz.
This should work with any decoder.

Regards -Dirk

5498. Noise level comparison (was RE: [navtexdx] Re: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)

From: Guido Schotmans |
Topic: 5348 Message: 5498

Hello Roelof and Dirk,

I'm wondering if a noise level comparison from one place to another really makes sense ? Don't we have to compare signal-to-noise ratio ? Furthermore when comparing noise levels on one and the same location but between different antennas we can see already huge differences.

Were you really using only 30.5 Hz for measuring or is this a typo ? This is way to narrow for Navtex.

Besides an ALA loop, I have 2 KAZ antennas. All of them have similar or lower noise floors as your values, but I never manage to get results like you guys. One of the Kaz antennas is suffering from qrm from a frequency controlled pump compressor in the neighbourhood clearly visible in the Perseus waterfall but still has -120 dBm noise floor when the bandwidth is 30.5 Hz ...

73,

Guido.

Hoi Guido,
Agreed, but Roelof was interested in the noise floor level of the whip vs. that of the loop.
As I reported, whip and loop noise levels are virtually equal at my QTH.
> Were you really using only 30.5 Hz for measuring or is this a typo ? This is

We have a misunderstanding. I was referring to the Perseus' spectrum resolution bandwidth, not the IF bandwidth which was 400 Hz. The figures I mentioned were read from the main spectrum of the Perseus.
>

This may seem a silly argument, but to catch DX, the signal must be present at your QTH. That same signal may not be present 10 km down or up the road. Even the ultimate super antenna can not pick up a signal that is simply not there.
At ~90km from the coast, I think I still have some benefit of the sea-effect, but not as pronounced as Roelof of course. Have a look at the reception maps on REU: the overwhelming RX locations are in the vicinity of a coast line.

Some old (late 1920's / early 1930's) measurements from AT&T suggested
8.5 dB drop in signal strength when the antenna is 1 mile (1.6km) inland
compared with the same antenna at the coast/sea edge.

5502. Whip vs. Loop and St.John's/Malta/Porto Santo

Yahoo group: navtexdx (2013)
Date: 2013-05-26 18:26:30 UTC
From: Dirk Claessens
Topic: 5502 Message: 5502
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all,

Attached another whip/loop comparison. (loop pointing 300deg Canada)
At the end of the file is a map showing the directions of all involved stations.
(thick red line is the loop direction)
LOOP = Perseus + Loop
WHIP = Lowe HF225 + whip

- At 02:19, both loop/whip start with perfect decodes, apparently there is no co-channel interference. (Note: St. John's - 02:10 schedule time - was either late or was overrunning its time slot)

-At 02:23, after a wipe-out intermezzo by Portpatrick, either propagation was getting bad, or Malta Radio (sched 02:20) was interfering. Anyway, at 02:25 Malta breaks through and the loop decodes the signal better than the whip, suggesting that the loop - besides deep nulls - also seems to have broad maxima.

- At 02:26, Malta ceases its transmission and both whip/loop continue with perfect decodes.
- At 02:30 surprise surprise: a scrambled fragment of Porto Santo comes through on the whip.
  Nothing is seen on the loop, as Porto Santo is almost 90 deg. of loop direction.

This is fun. :0)

Regards - Dirk

5503. Re: Noise level comparison (was RE: [navtexdx] Re: Navtex Log from Antwerp, BEL (>1000Km)

Hello Jack,

I have noted the same effect here when listening on the beach.
My impression was that the noise was also much stronger.

So it may be about time to repeat this measurement.
This is not difficult as I have a portable PERSEUS set up.

73,
Roelof, pa0rdt

5504. Re: Noise level comparison (was RE: [navtexdx] Re: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)

From: Roelof Bakker
Topic: 5348 Message: 5504

Hello Guido,

In this special case the noise floor measurements are of interest as at both locations the antennas are exactly the same. The mini-whip produces very close the same signal from one unit to the other. It probably is within 0.1 dB, but anyway +/- 0.5 dB.

Using a 30.5 Hz bandwidth has the benefit that one can avoid e.g. 50 Hz harmonics.
As long as everybody uses the same bandwidth the value is irrelevant.

Dirk, I used a 30.5 Hz bandwidth direct and read the S-meter.
I will repeat your procedure at daytime.

73,
Roelof

5505. RE: Noise level comparison (was RE: [navtexdx] Re: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)

From: Guido Schotmans
Topic: 5348 Message: 5505

Thanks for the clarifications Dirk and Roelof. Of course I know about the coastal effect of signals.

I think the correct way to measure is reading the S-meter while reading the noise floor level changes with the sample rate.

Nice to se that comparing antennas works at your side using Maxhold, while here switching antennas causes a click in the spectrum that causes a jump of the spectrum line.

73,

Guido.

Ciao Roberto,

I use Clifton Labs 518 Bandpass filter with Elad FDM-S1, because without preselection filters (like Perseus), everytime I need to use 30 Db internal attenuator. (I have a strong RF signal from BC RAI on 900 Khz at Siziano)

Do you have ADC clipping problems with your SDR receiver ?

For this reason I use the ALA 1530+ (the plus version of the 1530). It reduce the local 20kw AM transmitter which is located 6 km from where I live. It works perfekt. For the same reason I use a new Mini-Whip from Roelof. It also reduce the signal from that transmitter. The Mini-Whip is located 4 km from the transmitter. I don't need to reduce the ATT on my perseus.

Hello Vincent,

I use ALA1530+ and mini-whip too, but Elad-FMD-S1 has not preselection filters and at night sometimes receiver goes clipping.
Last year Siziano RAI trasmitter has reduced power from 300 Kw to 70 Kw, but without preselction filters I have again some problems;
to null Siziano RAI signal I need to turn ALA 1530 N-S and for my location it is not the best direction.
Modified MFJ-1025 with loop and mini-whip is another good solution.

For Roberto,

I don't think that Afedri SDR has internal preselection filters and it could be possible that at night its receiver goes clipping...

Ciao Maurizio and thanks for your reply.
As I know, no internal filters on AFEDRI, and maybe it's possible during the night the ADC clipping....
Have you solved this problem with this Bandpass filter?

Roberto

Hello Maurizio,

My PERSEUS has pre-selector filters, however I never use them!

73,
Roelof

Hello Roelof,

with Perseus I often need to activate 10 db attenuator; otherwise I must turn loop or use MFJ 1025.

When I use Elad FDM-S1 without preselector filters, I prefer use the 518 Khz band pass filter to avoid any overload problem overnight.

Unfortunately my location is noot so good.

After some years of experiment I think the location is the primary condition for natvtex/NDB dx.

Ciao Roberto,

yes, if you have overloading issues overnight, the band pass filter
could be a solution.

Hi Guido,

Whether using the S-meter or the reading from Perseus' main spectrum display, reporting just the reading will produce a meaningless number.
(which is why Roelof asked for my bandwidth settings)

To avoid comparing apples to oranges, one should report dBm readings normalized to a 1Hz bandwidth. Example: with the Perseus set to 500KHz, Span/RBW=25KHz/30.5Hz, BW=400Hz, I get the following readings:

S-meter = -111.5dBm, Spectrum reading @500KHz = -122.5dBm

To normalize to a 1 Hz bandwidth, one should subtract 10 * Log(BW) from the raw reading:

-122.5 dBm - 10 * log(30.5) = -122.5 - 14.84 = -137.3dBm (Spectrum)
-111.5 dBm - 10 * log(400) = -111.5 - 26.02 = -137.5dBm (S-meter)

We now have compared apples :0)

Regards - Dirk

Hello all,

VON, St. Johns produced a nice decode.
At the start of the message the signal strength was S-4 and gradually
decreased to S-3.

Hello Roelof,

Nice logs with St John's and Sydney at midday, just like Winter! Perhaps your PC clock has taken a wobble or is it all for real?

Best regards with a smile on my face,

Mike

Also keep in mind that depending upon the window function used, FFT bins
are, in many cases, not flat topped and there may be a significant
difference in signal power between a zero width spectral component at
the center of an FFT bin and one at the edge.

For example ...

Hann window is up to 1.5 dB different across the bin width
Flat top window is 0.1 dB across the bin width
Uniform window 3.9 dB

You can view the bins as having a /\/\/\/\ shape at the top of the bin,
with the shape and magnitude of the /\ being a function of the window
applied -- and exactly where a zero width spectral line falls within the
bin's /\ will make a difference in amplitude measurements.

In addition, the different windowing functions alter the shape factor of
the bin so more or less adjacent bin energy will appear in the desired bin.

While it's easy to read an FFT display for signal and noise, don't get
tricked into believing the numbers without further analysis.

Hello Mike,

With swapping antennas yesterday, I found this morning that my NAVTEX log was empty....
So, I did a rerun from last night's PERSEUS recording, but forgot to correct the time!

No miracles on order, I'm afraid, but just a senior moment!

73,
Roelof, pa0rdt

Hello, Experimenting with loops. This time a smaller 2m circumference loop. Gave me 9 good decodes from Astrakhan and 4 from Ismailia but no signs from across the pond. Pointing for max signal 270 and 90 degs for my best West and East directions.

```

5522. Re: Noise level comparison (was RE: [navtexdx] Re: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)
Date: 2013-05-28 14:16:25 UTC
From: George
Topic: 5348 Message: 5522

I have not kept up with the postings re: sign/noise measurements so perhaps these remarks are not appropriate.

As noted by K8ZOA, meaningful noise level measurements require care for the numerical value obtained depends on the Window Function chosen. But in addition the value obtained also depends on the FFT size as wells as the sound card sampling rate.

Spectrum Lab software offers a number of useful interpreter commands/procedures/functions for signal and noise measurements. In particular, noise(freq1,freq2), noise_n(freq1,freq2), and avrg_n(freq1,freq2) provide measures of the noise level within the specified frequency interval (i.e. freq1 to freq2). The last function averages and normalizes the result for exactly 1 Hz receiver bandwidth, independent of the windowing function, FFT size, and sound card sampling rate. (These noise functions automatically discard very high signal levels, e.g. due to the presence of rf carriers, within the specified freq interval.)

For the past year as a part of a grayline project that I have undertaken, I have been using these as well as other features of Spectrum Lab for unattended periodic recording over 8-hour intervals of the "effective" signal/noise ratio of a set of 10-20 NDBs. I have found SL eminently suitable for such measurements and recommend consideration of this software to others for signal and noise level measurements.

73, George M (N2XM)

Subject: Re: Noise level comparison (was RE: [navtexdx] Re: Navtex Log from Antwerp, BEL (>1000Km)

Also keep in mind that depending upon the window function used, FFT bins are, in many cases, not flat topped and there may be a significant difference in signal power between a zero width spectral component at the center of an FFT bin and one at the edge.

For example ...

Hann window is up to 1.5 dB different across the bin width
Flat top window is 0.1 dB across the bin width
Uniform window 3.9 dB

You can view the bins as having a /\/\/\/\ shape at the top of the bin, with the shape and magnitude of the /\ being a function of the window applied -- and exactly where a zero width spectral line falls within the bin's /\ will make a difference in amplitude measurements.

In addition, the different windowing functions alter the shape factor of the bin so more or less adjacent bin energy will appear in the desired bin.

While it's easy to read an FFT display for signal and noise, don't get tricked into believing the numbers without further analysis.

Jack K8ZOA

Hi Guido,

Whether using the S-meter or the reading from Perseus' main spectrum display, reporting just the reading will produce a meaningless number.
(which is why Roelof asked for my bandwidth settings)

To avoid comparing apples to oranges, one should report dBm readings normalized to a 1Hz bandwidth. Example: with the Perseus set to 500KHz, Span/RBW=25KHz/30.5Hz, BW=400Hz, I get the following readings:

S-meter = -111.5dBm, Spectrum reading @500KHz = -122.5dBm

To normalize to a 1 Hz bandwidth, one should subtract 10 * Log(BW) from the raw reading:

-122.5 dBm - 10 * log(30.5) = -122.5 - 14.84 = -137.3dBm (Spectrum)
-111.5 dBm - 10 * log(400) = -111.5 - 26.02 = -137.5dBm (S-meter)

We now have compared apples :0)

Regards - Dirk

Hi all,

St. John's in the log again, and some fragments from Ismailia,EGY.

Nice for the time of year.

Regards - Dirk

Topic: 5424 Message: 5533

Hello all,

The Kyoto Dst has returned to normal values.
Canadian NDB's from Newfoundland had decent signals, however on NAVTEX nothing was decoded from that area.
So it was abit of a surprise to find two good decodes from MNE, Portsmouth, USA!

5535. Re: [navtexdx] Navtex logs from Whitley Bay

Yahoo group: navtexdx (2013)
Date: 2013-05-31 13:03:56 UTC
From: Roelof Bakker
Topic: 5534 Message: 5535

Hello Mike,

I just rerun the decoding of NMN from my PERSEUS recording.
Preceding the two messages was the end of an othe rone from NMN, albeit at first too weak for decoding.

The noise floor in my 415 Hz bandwdith is -116 dBm and I found decoding starts when the signal is about 5 dB stronger.

An other interesting phenomenon was seen in the second message.
In the upper message window, ZCZC NA43 was displayed in reverse, however it was correctly displayed in the large message window.

Dirk, is this a build in feature?

73,
Roelof

Decoded from a PERSEUS recording

Hi Roelof,

Do you mean that in the upper (summary) window of the Log tab
<timestamp> 518 <SQ> A N 43 was showing, but that the lower window was showing ZCZC NA43?

Regards Dirk

5543. Loops and nightly disappearing nulls

Yahoo group: navtexdx (2013)
Date: 2013-06-01 14:13:52 UTC
From: Dirk Claessens
Topic: 5543 Message: 5543

Hi all,

As many users of loop antennas have noticed, something strange is going on at night: the loop's nulls seem to disappear completely for certain (mostly relatively close-by) stations. I have done a little experiment to figure out how far this effect is reaching relative to my QTH, or, in other words: is there a point where the nulls reappear?

The stations listed below are all located in directions within + and - 20 degrees relative to the nulls of the loop. Two antenna/receiver/decoder setups running in parallel on the same PC were used, in order to have a propagation "reference" (i.e. the whip):
- pa0rdt miniwhip + Lowe HF225
- 1 mtr loop with LZ1AQ/PA0RDT balanced preamp + Perseus

STATION	DISTANCE(km)	NULL AT NIGHT?
Pinneberg	460	no
corsen	772	no
Gislovshammar	802	no
Rogaland	811	no
La Garde	842	no
Varberg	878	variable
Jeloya	1006	no
----------limit??----------		
Coruna	1302	yes
Orlandet	1396	yes
Valencia	1474	yes
Talinn	1544	yes
Alger	1642	yes
Monsanto	1770	yes
Bodo	1865	yes

As shown in the table, Varberg at 878 km was the only station where the results were variable, i.e. when messages were received perfectly on the whip, depending on the time slot, messages were or were not received on the loop.

In general, and specifically for Varberg:
1/ far more messaged were logged on the whip than on the loop,
2/ decoding quality on the loop was consistently inferior to that of the whip
3/ but sometimes, messages on the loop could be decoded perfectly.

-For all stations _closer_ than Varberg, decoding quality and number of messages received were virtually equal for both antennas.
- For all stations _farther_ than Varberg (except Jeloya): where reception on the whip was possible (albeit with varying quality due to the greater distance), reception on the loop was consistently totally absent, or extremely scrambled.

Although located at 1006km, Jeloya consistently showed consistently absent nulls. This is presumably caused by the propagation path traveling ~80% over sea water (enhancing the ground wave??). The path from Varberg on the other hand, goes ~80% over land.

Conclusions:
1/ For distances closer than ~850..1000Km, and sky wave propagation present/prevalent, a loop has no nulls.
2/ For distances farther than ~850..1000Km,and sky wave propagation present/prevalent, a loop has nulls.
3/ Your mileage may vary due to the specificities of the propagation paths.

Regards - Dirk

You might try tilting the loop but that obviously complicates the mechanics of the problem.

In the early days of medium wave AM radio, it was thought that the taller the antenna, the better. However, relatively close to the transmitter listeners were plagued with deep fades after sunset.

By the early 1930's, the problem was understood as resulting from the vertical antenna pattern, i.e., a tall antenna (in terms of wavelength) might put down a stronger daytime signal, but the tall antenna had lobes at high angles so that ground wave and sky wave interfered with each other once the D layer disappeared after sunset. The 5/8 wavelength antenna was particularly liked because it yielded a noticeably stronger ground wave signal but it turned out to have a strong minor lobe at a high angle. The high angle radiation was of no consequence in the day but resulted in nighttime fades.

The solution was the "anti-fading" transmit antenna, which was either the now common 1/4 wave antenna or a tall antenna sectionalized with an insulated junction and phasing array that greatly reduced the high angle signal.

Of course, I imagine it will be extremely rare to find a NAVTEX station with a 5/8 wavelength transmit antenna, unless it has been repurposed from a LORAN or OMEGA mast.

Hello Dirk and All,

Thanks Dirk for your interesting experiment. I agree entirely with your findings. I have also been experimenting with different loop sizes to see if this made any difference, it does not.

For me the main purpose in using a loop is to null out the "local" big guns so that any DX at night time can be copied better, not the other way round.

In a few weeks time I will try Roelof's "noise cancelling" again. First try was not successful using my SEM device and so I think I need to build something better myself.

Regards, Mike

Hello Jack,

Thanks for that info. With the whip as antenna, I have often seen total cancellation of signals (ground and sky wave in perfect anti-phase) from Navtex stations 400..600 km from my QTH. This mostly occurred around sunset to ~1 hour after sunset.

Many sources say that sky wave signals are always horizontally polarized. If that is true, than perhaps a vertical loop will behave as a (non ideal) "rounded dipole"? Food for thought.

Regards - Dirk

Hello Dirk,

As there are many more NDB's than NAVTEX stations, it is interesting to look into that field.
It has often been observed that there is a dead zone between 500 and 1000 km.

On an other note, I have also observed complete canceling of stations closer than 500 km at night at a time that DX reception was excellent.

A good example of the first is NDB MNE-369, München, DEU, 677 km which is often compeletely absent when NDB ZDX-369, St.John, ATG, 6826 km is received.

SR-360, Saarbrücken, DEU, 362 km is also nowhere to be found when ASN-360, Ascension Island, 6809 km is coming in.

Also often Scandinavia drops out at night when Canada is really booming in!

73,
Roelof

Attachments: 1 described; binary payloads are missing from this source WARC

Dirk:

(I hope the equation comes through - if it does not, I can E-mail it to you.)

The full pattern of a loop antenna is:

K=(2?/?)(area of loop in m^2)(number of turns)

?= wavelength in meters

?=azimuth angle between direction of propagation and the normal to the plain of the loop

?=polarization tilt angle; the angle between the E-field vector and the vertical plane normal to the plane of the loop.

?=elevation angle between direction of propagation and plane of the loop.

E=electric field strength in volts/meter

? is normally called the angle of arrival

? is a measure of polarization rotation, from vertical to horizontal and angles between. If 0 degrees, the electric field vector of the signal is vertical, if 90 degrees, horizontal.

From H. H. Jenkins, Small-Aperture Radio Direction-Finding, Artech House (1991)

As you can see from the equation, even if the incoming signal is vertically polarized the loop null will shift. It will also shift if the polarization is horizontal. In the first case, where the inbound signal is vertically polarized but with a tilt, then tilting the loop by an equal amount will theoretically restore the null.

In fact, skywave is a mix of polarization - one can think of the result as a single vector with some angle or as multiple signals that sum to the single resultant. Regardless, the loop will either provide an inaccurate null direction or no appreciable null at all.

And the equation assumes that there are no complicating factors such as nearby objects that re-radiate signals and that the signal pickup is only through the loop; and that the loop is perfectly balanced.

For these reasons, which were known around the time of WW I, better DF antennas were developed, such as the Adcock, although the Adcock itself can suffer from bearing errors due to induced voltages on the antenna

structure if it is not properly constructed.

Jack,

Why doesn't this show any variation with distance from the loop? And what does E represent? Field strength where?

Thanks,

Tony

Subject: Re: [navtexdx] Re: Loops and nightly disappearing nulls

Dirk:

(I hope the equation comes through - if it does not, I can E-mail
it to you.)

The full pattern of a loop antenna is:

K=(2π/λ)(area of loop
in m2)(number
of turns)
λ= wavelength in meters
φ=azimuth angle between
direction of
propagation and the normal to the plain of the loop
ψ=polarization tilt angle;
the angle
between the E-field vector and the vertical plane normal to the
plane of the
loop.
θ=elevation angle between
direction of
propagation and plane of the loop.
E=electric field strength
in volts/meter
θ is normally called the angle of arrival
ψ is a measure of polarization rotation, from
vertical to
horizontal and angles between. If 0 degrees, the electric field
vector of the
signal is vertical, if 90 degrees, horizontal.

From H. H. Jenkins, Small-Aperture Radio Direction-Finding, Artech House (1991)

As you can see from the equation, even if the incoming signal is vertically polarized the loop null will shift. It will also shift if the polarization is horizontal. In the first case, where the inbound signal is vertically polarized but with a tilt, then tilting the loop by an equal amount will theoretically restore the null.

In fact, skywave is a mix of polarization - one can think of the result as a single vector with some angle or as multiple signals that sum to the single resultant. Regardless, the loop will either provide an inaccurate null direction or no appreciable null at all.

And the equation assumes that there are no complicating factors such as nearby objects that re-radiate signals and that the signal pickup is only through the loop; and that the loop is perfectly balanced.

For these reasons, which were known around the time of WW I, better DF antennas were developed, such as the Adcock, although the Adcock itself can suffer from bearing errors due to induced voltages on the antenna structure if it is not properly constructed.

Hello Jack,

Thanks for that info. With the whip as antenna, I have often seen total cancellation of signals (ground and sky wave in perfect anti-phase) from Navtex stations 400..600 km from my QTH. This mostly occurred around sunset to ~1 hour after sunset.

Many sources say that sky wave signals are always horizontally polarized. If that is true, than perhaps a vertical loop will behave as a (non ideal) "rounded dipole"? Food for thought.

Hi Anthony,

I'm guessing that E should stand for the total field strenght at the loop, as measured by a perfect isotropic antenna? A loop will pick up all or a fraction of E depending on orientation, polarization etc...

Well, it's not a complete propagation equation, but rather the voltage induced in a loop when exposed to a particular field intensity.

E is the field intensity in volts/meter. One normally considers E to vary with distance when considering propagation effects.

E is the field intensity of the electric field vector, measured, as is usually the case, in volts/meter.

LOL! Well, if that sounded like a "dumb question", it is because it was. This fits in the category of one of those words you been mispronouncing all your life, or one whose meaning you have had wrong for years. I started looking at radio books when I was about 10 years old. Somewhere in there I saw my first antenna pattern and I immediately interpreted the big lobe sticking out as a radio signal reaching out a great distance. That interpretation stuck. Now, over the years I have thought about antenna patterns and I was actually thinking about them correctly (relative gain vs direction) but another part of my brain still wants to insert distance into the picture.
Enough excuses. Thanks setting me straight on that. I guess I would divide both sides by E and then plot that ratio to get the "pattern".

Subject: Re: [navtexdx] Re: Loops and nightly
disappearing nulls

Dirk:

(I hope the equation comes through - if it does not, I
can E-mail it to you.)

The full pattern of a loop antenna is:

K=(2π/λ)(area
of loop in m2)(number of turns)
λ= wavelength
in meters
φ=azimuth
angle between direction of propagation and the
normal to the plain of the loop
ψ=polarization
tilt angle; the angle between the E-field vector and
the vertical plane normal to the plane of the loop.

θ=elevation
angle between direction of propagation and plane of
the loop.
E=electric field strength
in volts/meter
θ is normally called the
angle of arrival
ψ is a measure of
polarization rotation, from vertical to horizontal
and angles between. If 0 degrees, the electric field
vector of the signal is vertical, if 90 degrees,
horizontal.
From H. H. Jenkins,
Small-Aperture Radio Direction-Finding, Artech House
(1991)

As you can see from the equation, even if the incoming
signal is vertically polarized the loop null will shift.
It will also shift if the polarization is horizontal.
In the first case, where the inbound signal is
vertically polarized but with a tilt, then tilting the
loop by an equal amount will theoretically restore the
null.

In fact, skywave is a mix of polarization - one can
think of the result as a single vector with some angle
or as multiple signals that sum to the single resultant.
Regardless, the loop will either provide an inaccurate
null direction or no appreciable null at all.

And the equation assumes that there are no complicating factors such as nearby objects that re-radiate signals and that the signal pickup is only through the loop; and that the loop is perfectly balanced.

For these reasons, which were known around the time of WW I, better DF antennas were developed, such as the Adcock, although the Adcock itself can suffer from bearing errors due to induced voltages on the antenna structure if it is not properly constructed.

For a normalized pattern, where the maximum value = 1, just plot the term inside the (). In other words set K = 1, E=1.

Since K and E are scalar values, independent of the sin and cos terms, the resulting pattern will have the correct shape and relative response (in voltage). Most patterns are plotted in dB, so you may wish to add a 20 Log() conversion.

Hello Tony,

Except for the figure of 8 pattern for a normal loop, reception is identical to a vertical antenna, alas a mini-whip.
A few years ago I had a loop and a mini-whip with equal output and it was amazing to see how DDP-392 from Puorto Rico came in with exactly the same strength on both antennas.

The reason that fading in relation to distance is perceived as a major problem is due to the fact that most of the time we are listening for weak signals. So it does not take much to wipe them out.
In winter GPK, Portpatrick, Scotland at 707 km is often overrun by VON, St. Johns, CAN at 3980 km!

On an other note, have you tried SDRconsole (V2) with your RX LF Ensemble II?
Awaiting the arrival of my ordered Afedri SDR, I have been looking at it. It has been much improved and filtering and visual display for chasing NDB's are excellent.

73,
Roelof

Hello all,

The Kyoto Dst dropped from + 10 at 01:00 UTC on June 1 to - 125 at 09:00 UTC.
It is recovering slowly, but at the moment it is still - 35.
Nothing from Canada was received.

Hi Roelof,
I have tried SDR console but not since last fall. Actually, the latest version of HDSDR is not too bad for NDBs. As you know, I tend to use visual copy mostly and the latest HDSDR seems to have improved in this area. Unfortunately, I am somewhat addicted to horizontal scrolling and I still find that I am more comfortable with SpectrumLab., not that it doesn't have issues as well.
SDR console, if I am remembering it correctly, seemed awkward in it's user interface. Maybe it is time for me to look again.
Also, I was not the one with the questions about disappearing nulls. My antenna is omnidirectional although I plan to try something different this fall.
Tony

Hi All,

The latest Notices to Mariners shows some minor changes at Iqaluit in Canada, and this means that they will now be broadcasting from Mid May to late December rather than Mid June to November, this might make it much easier to hear during those very long nights around the Equinox.

73 for now, Alan.

Hello all,

Propagation is still in the doldrums.
None the less three scrambled messages from Sydney were decoded.

Canadian propagation has not been so poor lately.
With the greatest difficulty, I could find just one NDB.
Guess what? QY-263 from Sydney as well!

Hello Roberto,

Today, I have received my Afedri SDR.
I will leave it running on 518 kHz and see what happens.

I am using SDRconsole V2 and my gain settings are:

IF 1.60
RF 20 dB

I have a MFJ1025 in-line to reduce local noise and also a two port power splitter, which has a loss of 3 dB.
The power splitter feeds the Afedri and PERSEUS.

73,
Roelof

Hello Vincent,

Bad luck, what you logged was Cullercoats. :0(
GA44 was received in error as CA4. The C + "norwegian" has fooled Yand into $19C Vardo.

Hi Roelof,

You live in a very selective sweet spot for Sydney :0)
No logs from me. An underground mains cable down the street burned out last night. Finding the location of the problem was easy: the soil was steaming...

Hello all,

Yesterday I received my Afredi SDR:

http://www.afedri-sdr.com/

This is a direct sampling SDR, just like the PERSEUS and the Excalibur.
The main difference and hence lower cost is that the ADC is 12 bit, where
the PERSEUS uses a 14 bit ADC and the Excalibur 16 bit.
The number of bits does not say it all. Less bits give less dynamic range,
however a 12 bit ADC can provide enough dynamic range for a good receiver.
It is just a balance between gain before the ADC and signal to noise of
life signals. It is important to set the IF and RF gain correct to avoid
overload.

I have tested the Afedri with SDRconsole V2 on NAVTEX 518 kHz last night.
Part of the decodings have also been made from my PERSEUS recording and
the PERSEUS software.
Though this is a very preliminary test, I can't find much difference, if
any.

Roelof and list,

I am pleased to hear about the Afredi SDR and am glad you are having success with it. But others should be aware that a 12-bit ADC may be overloaded by strong nearby MW (or even HF ham) transmitters. Reducing the RF gain can prevent overloading, but can also decrease S/N ratios in the LW band. In this case, you would need to have RF filtering before the receiver. It all depends on your local environment.

I make this observation from personal experience with my own 12-bit SDR (an Ettus Research USRP1; see https://www.ettus.com/product/details/USRPPKG). Without a BCB lowpass or band-reject filter my local AM station causes ADC overload, which degrades reception on all frequencies. With the filter, the USRP1 (with appropriate daughterboard and pre-amp) makes a fine LF receiver.

Best regards,

-- Don W.
Raleigh, NC

Hi Roelof
I'm waiting for your first tests with this receiver.
I can't use your software because the old firmware of my Afedri run only
on SDR 1.5
And of course I'm waiting for your antenna.
Thanks
Ciao
Roberto

From: Roelof Bakker
Topic: 70 Message: 5570

Hello Don,

My nearest MW BCB station is on 828 kHz and about 50 km as the crow flies.
It is running 10KW to a decent antenna and is producing a healthy -26 dBm.
This is posing no problem to the Afedri.

I have now build several low pass filters, which have a cut off frequency
(-3dB) at 530 kHz.
Measured ultimate rejection is greater than 60 dB, which starts at 790 kHz.
So if the going gets really tough, I could put it in line!

73,
Roelof

Hi all,

A nice opening over land from Astrakhan, and Bodo is back.

Regards - Dirk

P.S. I'm off for a Portugal tour tomorrow, so no logs from me for more than a week.

Hello all,

I have now replaced my trusty AR7030plus for the Afedri SDR.
The AR7030plus now resides in my workshop, so I can do some decent
listening whilst working.
I have installed the extra filter board and it has extra 250 Hz and 1 kHz
filters.
It is one of the best sounding receivers I have ever owned.

The Afedri SDR does an excellent job on NAVTEX.
The idea is to set up two software receivers in Studio 1; one for 490 kHz
and the other for 518 kHz.
Running two instances of YaND both NAVTEX channels will be monitored.

Date: 2013-06-11 16:07:56 UTC
From: Roelof Bakker
Topic: 5419 Message: 5585

Hello Roberto,

Congratulations on catching Novorossiysk as anew one.
I also found your UNID, however on 22:12 UTC yesterday:

20130610 2212 518 $00W UNID 0
2013-06-10 22:12:04> ZCZC WA52
2013-06-10 22:12:08> 102214 UTC JUN 13

2013-06-10 22:12:19>
2013-06-10 22:12:20> NNNN

I have been looking on this transmission and on the regular 23:40 UTC
schedule from La Garde and I believe your assumption is correct: both
signals were of equal strength.

Daily log:

Since quite a while a (much scrambled) message from NMR, Puorto Rico was
decoded.

5586. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-06-12 09:10:17 UTC
From: Roelof Bakker
Topic: 5419 Message: 5586

Hello all,

Last night the European static map was almost empty and this seems to help.
I found an unusual long string of messages from Astrakhan (20!), only
interrupted by two messages from Grindvik, ISL. The quality of the decodes
is excellent. See below.
NMR, Puorto Rico showed up again as did Sydney, CAN.
It seems that the Afedri direct sampling SDR is doing an excellent job.

It is interesting to note that none of the stations from Turkey was
decoded!

From: bob.blodge@...
Topic: 5581 Message: 5587

Hi All,

Niton is my " next door nieghbour, only 10 Km down the road, and my biggest

interference generator !

I think they often put 518 in because the also use 490.

Unfortunately, I have eliminated from my logs so I can't go back and see when

they started doing this.

Cheers, Bob

5588. Question: Re-transmitted NAVTEX information

Yahoo group: navtexdx (2013)
Date: 2013-06-12 13:46:32 UTC
From: g_muha
Topic: 5588 Message: 5588

QUESTION: How does one judge whether the GCC transmission (see below) was independently received or whether it was included in a continuing NMG transmission bracketing the GCC transmission?

COMMENT: I am a newbie to NAVTEX DXing and, mindful of Dirk's answer to a question I posted some months back, suspect that the GCC transmission was simply included as a continuation of the NMG transmission. (Earlier Dirk had cautioned that some stations re-broadcast info from other stations.)

The sequence NMG/GCC/NMG (see below) was received twice separated by almost exactly four hours. The content of the transmissions beginning at 0516 hours and those at 0917 hours were sensibly the same. (Only the text of the 0917 hour sequence is shown below; the last part of the 0521 NMG sequence was somewhat garbled.)

If, as I suspect NMG was simply rebroadcasting the GCC transmission, what I find puzzling is why the "ZCZC GA53" beginning and the "NNNN" ending were included as a part of the GCC info (which caused YAND to read it as a separate transmission). Is this common practice with re-transmitted info? If so it would be terribly misleading as to the source of the transmission but have the advantage of unequivocally displaying the source of the information. Clearly I still have much to learn about NAXTEX transmissions.

Comments will be gratefully received. Thank you.

73, George M (N2XM)

5589. NAVTEX logs from Whitley Bay ENG

Yahoo group: navtexdx (2013)
Date: 2013-06-12 15:14:40 UTC
From: g3gms
Topic: 5062 Message: 5589

Hello Group, Returning from holiday I was pleased to find Bahrein and Porto Santo,MDR. Also 20 minutes of messages from Astrakhan. RAW text
of 3 UNID indicate probably from Canada but not enough for confirmation. All is not lost near to our mid summer, it just shows, never give up!

5590. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-06-13 15:42:09 UTC
From: Roelof Bakker
Topic: 5419 Message: 5590

Hello all,

I found two test messages from Horta and also three decodes from VCO,
Sydney, CAN NL.
The latter was a surprise as propagation from NDB's from that area was
just so, so!

From: bob.blodge@...
Topic: 5062 Message: 5597

Hi Mike

20130612 0230 518 $02P CTQ Porto Santo,MDR 2643

Where did you get this info about Porto Santo from ?

I have what seems to be the latest Database update, 05 May,

and all my messages, just like your one, from Porto Santo

come in as UNID !

Do you have details of the location of RZ98 LISBOA, which

comes in with an identical message ?

Regards

Bob (Isle of Wight)

5598. Re: NAVTEX. PORTO SANTO

Yahoo group: navtexdx (2013)

From: g3gms
Topic: 5062 Message: 5598

Hello Bob,

If you open Yand and look under the Database TAB, scroll down Station List to find
518 2P CTQ Porto Santo,MDR
highlight this entry.

Next look at centre panel and "Geographical" Keywords (GID), which should list the following geographical keywords:
Portosanto
Porto Santo
Madeira

If these are not listed you can enter them yourself.
I have no Unique Keywords (UID) listed.
These GID words will become effective only on new messages received after entry and should get rid of the UNID label.

Regarding RZ98 Lisboa, I have not received any such messages and sorry no info either.

Hope this helps. Dirk is the expert of course but is on a short holiday at the moment.

Regards,
Mike

>

Hi George,

It's much simpler. The NMN message below was wrongly identified by Yand as 1G Cullercoats, UK. The reason is the presence of the keyword VIKING together with the identifier G. For Cullercoats, Viking is referring to the Viking bank in the North Sea. This is a catch-22 situation: I could easily delete the keyword from the distributed master list, but then messages from Cullercoats may not be identified by Yand for many users in Europe.

As your chances to actually receive Cullercoats are pretty dim, the easiest solution is that you delete the keyword: Database > scroll down to 518 1G GCC, click on it, double-click on VIKING > OK > confirm keyword list.

5604. NAVTEX logs from Whitley Bay ENG

Yahoo group: navtexdx (2013)
Date: 2013-06-16 11:24:32 UTC
From: g3gms
Topic: 5062 Message: 5604

Hello All, Logs from last night. UNID RZ98 from LISBOA received, mentioned by Bob previously, has anyone any ideas, please? A strange propagation night, seems to be lots of combined mixed up messages blended together from different stations, so perhaps lots of QSB. I didn't try to unravel them!

```

Hello all,

When searching for Monsanto,Portugal, Google Earth will bring you to a tiny village ~100 km northeast of Lisbon and some 40 km inland. I always found this a strange location for a transmitter site.

When touring Lisbon last week, I suddenly noticed a direction sign "Monsanto 5 km". Que?? I asked the tour guide about it, and he explained that this was the "Forte de Monsanto", a 19th century fortress located on a green hill just outside and west of Lisbon.

Back home, in GE I immediately spotted a green area west of Lisbon, zoomed in, and sure enough a telling street name showed up: "Estrada do forte de Monsanto". I then entered Street View and... a large antenna farm showed up. Bingo!

GE coordinates: 38.733295N -9.190528W

Good show Dirk.

It is always nice when a bit of detective work provides and answer.

cheers, Graham vegtc

Hi Graham,

I have carefully checked the headers of the message: it is a clear case of identity theft. No spoofed/fake headers, just the usual chain of yahoo servers. The originating IP resolves to a us-west domain.

WARNING TO ALL

A few weeks ago, it almost happened to me. I clicked a weblink from within a yahoo group, and was directed to a *perfect* copy of Yahoo's login page asking for my yahoo username/password. Only the URL showing up in my browser looked fishy and did not resemble the indicated weblink at all.

If you click such a link, and enter yourusername/password, your account is compromised.

If you notice this too late, IMMEDIATELY change your password!

Regards - Dirk

Hi,

Earlier in the year I discovered that my ISP account had been hacked and it had started to send out spam messages although I was very quickly alerted to it when they started to arrive in my in Outlook box after a few minutes. My first reaction was to check my Outlook sent box and there was nothing there however when I checked my online mail access I could see that they had come from it and used the address that are stored in the online address book. Fortunately I was able to resolve the situation very quickly as it happened while I was working.

My ISP uses Yahoo as I am sure some other ISP also do and it seems there are major security holes within its system and I know of quite a few people who have experienced the same problem who are with the same ISP as me, BT Internet. Apart from being a member of this group and a few others I also own and moderate several other groups on Yahoo and have seen problems affect them all at some stage. My normal procedure for dealing with this is similar to the one Alan uses on the ndblist and immediately change the affected members status to moderate all posted emails until I know the problem has been resolved. At the same time I post a warning message to the group concerned warning them not to open the rouge email and delete it on receipt. I will also send a message direct to the affected person advising them that they have a problem with their email generating spam.

I feel that most of these cases are similar to somebody having an unfaithful partner and are normally not aware of the problem until somebody else tells them. On that basis to ban them from a Group is rather like using a pile driver, not even a sledge hammer, to crack a hazelnut. In a number of years of owning and moderating groups I have only ever had one occasion to remove a member and that was due to that particular member actually generating spam, rather than being an innocent victim, and that was after a number of warnings.

In this case I believe that Joe was an innocent victim, just as I was early this year, and he should not have been banned but his postings moderated until he ws able to resolve the problem.

Robert,

I have sent Joe a personal email a few days ago to explain the problem, but have not yet received a reply. Joe was listed in the group with 2 different addresses, of which one was bouncing. I'm hoping that the address I used to send him mail is not some throw-away account.

Hi Dirk,

I had also wondered why a Navtex station was way off the coast

almost into Spain !

I have now found the reference to Porto Santo in the database

under the 490 stations !

Portugal seems to be having quite a problem finding another site !

Porto Santo, Lisboa (probably Lisbon) and now Ponta Delgada

which is also in Portugal !

Regards

Bob

5626. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-06-22 10:39:46 UTC
From: Roelof Bakker
Topic: 5419 Message: 5626

Hello all,

There was good propagation from Canada last night, though it seemed to
favor the Labrador Coast, rather than Newfoundland. So, it was not much of
a surprise that on NAVTEX nothing from Canada was decoded!

Daily log:

5628. More on Joe KI5FJ...

Yahoo group: navtexdx (2013)
Date: 2013-06-23 09:14:51 UTC
From: Dirk Claessens
Topic: 5628 Message: 5628

All,

Despite several attempts I could not contact Joe via his Yahoo mail address.
Below is proof that Joe's account was hacked, and was misused by spammers located in Cairo, Eqypt.

Regards - Dirk

Joe's last "genuine" message on May 15 in the Yahoo NBEMSham group:

Re: [NBEMSham] Re: The local power company [1 Attachment]
From: Joe K I 5 F J <jen1joeo@...>
To: "NBEMSham@yahoogroups.com" <NBEMSham@yahoogroups.com>
Sent: Wednesday, May 15, 2013 4:44 PM
Subject: [NBEMSham] Re: The local power company [1 Attachment]

Folks,
The
NM dry desert results in power pole shrinkage.This loosens up the
hardware. Loose hardware in strong power line fields results in arcing
and RFI.
[..snipped]
making pin pointing difficult.
Good Hunting !
73
Joe O, K I 5 F J
NNNN

After this date, Joe was literally "Joe-jobbed", spammers gained access to his account and changed the password. Misuse of Joe's account in Yahoo groups started around June 15..17th in the NBEMSham group, with a link to the following site

http://www.winetasteloversclub.com/XXXXEDITEDXXXXXX

When opening this link, my aVast popped up a "malicious site" alarm and access was blocked.
The main URL winetasteloversclub.com showed up with a message "hacked by S4V4S"....

The spammed URL in NAVTEXDX on June 17th

<http://cvtennisclub.net/XXXEDITEDXXXXX>

is dead and gives a 404 page not found error.
The main URL cvtennisclub.net points to a tennis club in Indonesia and appears to be harmless.Site was probably cleaned up.

Injection point of spam in NAVTEXDX message mail header

X-Received: from [197.134.132.186] by web164906.mail.bf1.yahoo.com via HTTP; Mon, 17 Jun 2013 03:01:25 PDT

  n6rry <n6rry@...>, nancyjaneostrowski <nancyjaneostrowski@...>,
  navtexdx <navtexdx@yahoogroups.com>

From: Joe K I 5 F J <jen1joeo@...>
X-Yahoo-Profile: ki5fj
Sender: navtexdx@yahoogroups.com

Apparently, Joe's stored email addresses were also spammed.

* The originating IP address 197.134.132.186 is located in Egypt, Cairo
  See <
http://www.reputationauthority.org/lookup.php?ip=197.134.132.186&Submit.x=17&Submit.y=6>

* 197.134.132.186 does not have a reverse DNS entry (this is fishy)
See: <http://mxtoolbox.com/SuperTool.aspx?action=ptr%3a197.134.132.186&run=toolpage>

* Spammer ISP info: (personal info xxxxxxx-ed)

% This is the AfriNIC Whois server.
% Information related to '197.134.0.0 - 197.135.255.255'

inetnum: 197.134.0.0 - 197.135.255.255
netname: Vodafone-Data-Routes
descr: Vodafone Egypt Mobile Users Pool

address: Vodafone Egypt Smart Village ,C3
address: Cairo
address: Egypt
e-mail: xxxxxxxxx@...
phone: +20100 1427903
source: AFRINIC # Filtered

Spam was sent from a mobile device, how handy...

---
* Finally, the IP block containing 197.134.132.186 is listed in DNSBL blocking lists

Spamhaus Ref: PBL1519910
197.132.0.0/14 is listed on the Policy Block List (PBL)
This IP range has been identified by Spamhaus as not meeting our policy for IPs permitted to deliver unauthenticated 'direct-to-mx' email to PBL users.

Conclusion: be very careful when clicking Spammed URL's in Yahoo groups...

From: Graham
Topic: 5628 Message: 5632

Dirk,

Excellent detective work, well done.

The bad guys can be pretty savvy when it comes to throwing out tempting bait, the right word or phrase or "apparent" source of the email can trick many into clicking when they should not. Unfortunately it is usually the unknowing, the careless, and the ignorant that get caught far too easily. They are too naive and trusting I suppose. I am forever being asked by family and friends to fix their computers when they start running poorly or act strange. They usually don't believe me when I describe to them what has happened and how it happened even before I take a look at their machine. And, they sadly feel safe because they have spent $$$ on good antivirus software and have their Windows firewall turned on and they insist they are careful.

Now, to change the subject back to NAVTEXDX'ing; I haven't been doing much lately but I do read everyone's postings. I put up a Clifton Labs active antenna late last fall and used it over the winter months. It worked OK but I was a little disappointed that it was no better than what I been using previously. Perhaps I was already at the limit short of install a rhombic or a beverage; perhaps I just did not get the new active antenna installed in it's best configuration - I suspect the later and will try a few different things to get it into shape before winter. I am also putting together a VLF/LF/MF up-converter. It seems that even our modern radios such as the Yaesu FT-950 work OK below the MW BCB they do leave something to be desired. I am hoping that a better installed active antenna and a quality up-converter will improve my ability to DX NAVTEX and NDB's.

cheers, Graham ve3gtc FN25ig

>worked OK but I was a little disappointed that it was no better than
>what I been using previously. [..]
>
>
>I'm using Roelof's miniwhip for about 4 years now. The little jewel easily outclassed all wire antenna's I'd been messing around with before (and by outclassing I mean hearing a station clearly on the wip, and hearing just noise on the other antenna). It's mounted on a 5 meter PVC pole some 15 meter from the house, and I have connected the coax braid t0 3 1.5 meter ground rods at the base of the pole. This has further lowered my noise floor wich is now around-120 to -125 dBm around 500 KHz measured on the Perseus spectrum @ 30.5 Hz resolution bandwidth (or -115dBm on the S-meter with IF-bandwidth 400 Hz).

Hi All,

Local thunderstorms have ruined reception for the last few nights.

This was all I could get last night ! (1500 Km)

20130623 2049 518 $03F TAL Antalya,TUR 2966

20130623 2143 518 $03K SVK Kerkyra,GRC 2031

20130623 2202 518 $03M 5BA Cyprus,CYP 3235

20130623 2229 518 $03P 4XO Haifa,ISR 3567

20130623 2243 518 $03Q 9AS Split,HRV 1545

20130623 2334 518 $03G ICH Sellia Marina,ITA 1910

20130623 2351 518 $01X TFA Grindavik,ISL 1951

20130623 2358 518 $03W UJB Astrakhan,RUS 3611

20130624 0015 518 $03B 7TA Alger,ALG 1618

20130624 0033 518 $03E TAF Samsun,TUR 3036

20130624 0130 518 $03J LZW Varna,BUL 2294

20130624 0230 518 $00P CTQ Porto Santo,MDR 1610 *

20130624 0240 518 $00R Lisboa ???? *

20130624 0259 518 $02R CTV251 Monsanto,POR 1498

20130624 0450 518 $02F CTH Horta,AZR 2541

My atlas shows Madeira at more or less the same distance

as Algiers so I've rounded this up !

Still don't know where Lisboa is but I keep getting the

same sort of message as Poto Santo gives.

Regards

Bob

5638. GEN - China updates

Yahoo group: navtexdx (2013)
Date: 2013-06-24 17:08:58 UTC
From: Alan Gale
Topic: 5638 Message: 5638
Attachments: 1 described; binary payloads are missing from this source WARC

Hi All,

Attached are the latest updates from the Weekly Notices to Mariners,
this time officially confirming the details of the 486 kHz 'National'
Chinese language stations, and also showing that a station in Shanghai
is operating in slot Q on 4209.5 kHz. A scan of these is attached.

Alan.

5639. Re: Log From Isle of Wight.

Hi Bob,

I don't know what kind of atlas you're using, but most atlases use Mercator (cylindrical) projection to depict the world. This projection is not very suitable for measuring distances.

From Google Earth (which measures great circle distances) I get the following:
Isle of Wight => Alger = ~1580 km
Isle of Wight => Madeira/Porto Santo = ~ 2300km

The Portuguese naval headquarters is located in the capital Lisbon (Lisboa in Portuguese) so it is not unusual to see that mentioned in messages. (including those from Porto Santo, a small island close to Madeira and both belonging to Portugal)

Regards - Dirk

Thanks for that Alan!

To all: Decent conditions give perfect copy of XSG Shangai in Europe, but Istanbul more often than not spoils the fun by keeping their transmitter on ARQ-sync for hours. :0(

Regards - Dirk

Hello all,

I found NMN Portsmouth, USA and three messages from VCO, Sydney, CAN NL, despite the fact the Kyoto Dst was -35 at the time. NMN was correctly labeled as UNID, but you can see for the raw log below that it is a genuine catch for sure!

Daily log:

5643. Re: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)
Date: 2013-06-25 18:23:35 UTC
From: DirkCL
Topic: 5348 Message: 5643

Hi all,

A mixed 518/490 log. Nothing impressive, except for a very long string of messages from Astrakhan yesterday.

Regards - Dirk

Report from : Dirk Claessens
QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver : Perseus SDR, Lowe HF225
Antenna1 : paOrdt Mini-Whip @ 5m,
Antenna2 : 1m. loop + LZ1AQ/PA0RDT preamp
Navtex-Decoder : YaND 6.4

Hello all,

Static is tapering off, however T/A propagation did so as well!
Both Bodo and Talinn were back though.

Topic: 5628 Message: 5645

Hi Dirk,

Yes, I did say atlas but what I was using was my globe ! { and a piece of cotton)

It is a very old globe but I would have thought that it would have given a more accurate

measurement than it apparently did .

So, do these messages actually come from a station in Madeira or from where ?

Do the Porto Santo and the Lisboa messages all come from Monsanto ?

I used to have the formula for calculating the GCD between two Lat/long locations.

Do you have this formula, please ?

Regards

Bob

On 24 Jun 2013 at 19:05, DirkCL wrote:

Hi Bob,

I don't know what kind of atlas you're using, but most atlases use Mercator (cylindrical) projection to depict the world. This projection is not very suitable for measuring distances.

From Google Earth (which measures great circle distances) I get the following:

Isle of Wight => Alger = ~1580 km

Isle of Wight => Madeira/Porto Santo = ~ 2300km

The Portuguese naval headquarters is located in the capital Lisbon (Lisboa in Portuguese) so it is not unusual to see that mentioned in messages. (including those from Porto Santo, a small island close to Madeira and both belonging to Portugal)

Regards - Dirk

Hello all,

Despite moderate static, I found two excellent decodes from VCO, Sydney,
CAN NL and one from NMN, Portsmouth, USA.

>So, do these messages actually come from a station in Madeira or from >where ?

>Do the Porto Santo and the Lisboa messages all come from Monsanto ?

Hi Bob,

Identifier 2R => Monsanto
Identifier 2P => Porto Santo

Porto Santo is a small island north east of and very close to Madeira.

>I used to have the formula for calculating the GCD between two >Lat/long locations.
>Do you have this formula, please ?

See the Haversine formula in Roelof's link.

Regards - Dirk

Date: 2013-06-29 09:55:54 UTC
From: Roelof Bakker
Topic: 5419 Message: 5654

Hello all,

Yes, something was amiss yesterday.
The Aedri SDR features a SMA connector for the antenna input.
Somehow the nut on the cable had come loose, causing a bad ground
connection.
This introduced noise spikes and reception was affected quite a bit.

Overnight the Kyoto Dst has dropped to -99 and the NOAA Aurora index was a
whopping 10.
This does not bode well for T/A reception in the near future.

Topic: 5419 Message: 5656

Hello all,

The Kyoto Dst has now slowly recovered to -27.
However, the impact on propagation is still severe.
Bodo is still missing, which is to be expected, but Grindavik, ISL, did
not turn up either.
This is very rare for my location.

Daily log:

From: bob.blodge@...
Topic: 5628 Message: 5658

Hi Dirk and Roelof

Many thanks, it was the Spherical Law of Cosines that I had and used occasionally. That was just about the limit of my mathematical skill.

About 60 years ago I took my BSc examination three times and failed in Maths each time having passed with honours in all other subjects !

I have managed quite well without it .

When I measured the distance on my old globe, the printing is so faded that I used the Azores in mistake for Madeira !

Regards

Bob

Hello Bob,

You might consider using Google Earth instead:

<http://www.google.com/earth/index.html>

Press the blue button on the right to download/install.

It's free and it's really great and simple to use!

Regards - Dirk

Hello Dirk,

The drop in the Kyoto Dst has been severe and this time conditions are not recovering quickly.
Last night, I did not find a single Canadian NDB, which last happened on March 22 2013.

I did not find your string of messages from Cyprus, though.

Bob, the beauty of the computer age is that very complex calculations can be performed now by the inaugurated in Math! E.g. filter design is an art in itself, however with free design programs it is quite easy.
And the calculations agree very well when the build filter is evaluated.

Hello all,

The Kyoto Dst dropped overnight to -80.
As the previous disturbance was just a couple of days ago, the effect is
almost without delay.
(Just a single very weak NDB copied from Canada.)

Hello All, Over 1500km logs from last night. Interesting UNID probably from Sydney,CAN but not enough to be sure. Multiple messages from Ismailia, Astrakhan and Cyprus.
Roelof I hope you found the "bug" in your system.

Hi to all.
Last night first time of reception with my brand new ELAD FDM S1, just arrived, instead AFEDRI.
Not visible difference with old system, but from next week end, after I will have found good location to the mini whip (not simple), I want to put in comparison my two SDR receiving systems.
For the moment, this is the ELAD log:

```
YYYYMMDD HHMM KHz ID CALL STATION,COUNTRY DIST (Km)

Hi Dirk,

In the Station List (latest one) there is a station called PORTO SANTO

but apparently only on 490 Khz.

There is also a station called HORTA on both 490 and 518.

Here are two messages recently received on 518 which have the same sort of

" Identification " (the first one has been truncated to save space)

5680. Re: The Porto Santo mystery

Yahoo group: navtexdx (2013)
Date: 2013-07-11 20:28:02 UTC
From: DirkCL
Topic: 5628 Message: 5680

Hello Bob,

There are 3 Portuguese Navtex stations.

The main site called Monsanto is located near Lisbon, and uses ID R in navarea 2 on 518, and G on 490KHz.

Porto Santo (a tiny island very close and NE of Madeira) uses ID P in navarea 2 on 518, and M on 490KHz.

Finally, Horta uses ID F in navarea 2 on 518, and J on 490 KHz.
The town of Horta is located on the island Faial, part of the Azores island group.

Hope this clears things up.

Regards - Dirk

5681. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)

From: Roelof Bakker
Topic: 5419 Message: 5681

Hello all,

Due to the mediocre results of the last days, I wondered if my current NAVTEX set up with the Afedri SDR is working properly. I checked a few things, but could not find anything wrong.

Last night I found two rare (for me) decodes from Horta and also a much scrambled decode from VON, St. Johns, CAN.
The latter is an excellent example of a decode without proper header that still van be identified by the contents.
The Kyoto Dst is still below -20.

Hi Dirk,

Yes, thanks, this does clear things up and is what I had assumed !

In a previous answer, you seemed to indicate that the "main " station would include

all messages which mentioned other, relevent, locations.

Presumably there is no " LISBOA " station although there are messages that include

reference to Lisboa just like the ones from Porto Santo did until very recently. Perhaps

the intention is to change the name MONSANTO at some future date to LISBOA..

Strangely, HORTA has been coming in much more frequently in the last couple of weeks

on 518.

Regards

Bob

Hello Bob,

There are 3 Portuguese Navtex stations.

The main site called Monsanto is located near Lisbon, and uses ID R in navarea 2 on 518, and G on 490KHz.

Porto Santo (a tiny island very close and NE of Madeira) uses ID P in navarea 2 on 518, and M on 490KHz.

Finally, Horta uses ID F in navarea 2 on 518, and J on 490 KHz.

The town of Horta is located on the island Faial, part of the Azores island group.

Hope this clears things up.

Regards - Dirk

Hi Bob,

You may have missed my message in the group about the name Monsanto.
It is not referring to the tiny village Monsanto in the hills ~90 km NE of Portugal, but to the ancient "fortress of Monsanto" in Lisbon.

Ijust found out what CENCOMAR means. This is short for"CENtro de COmunicações, de Dados e de Cifra da MARinha" (Marine (Naval?) Centre for Communications, Data and Cyphers??)

Regards - Dirk

5685. NAVTEX from Gualdo Tadino Italy

Yahoo group: navtexdx (2013)
Date: 2013-07-13 08:06:25 UTC
From: i0002swl
Topic: 5419 Message: 5685

Hi to all
I'm curious about members logs of last night, because high station distance received from both of my systems (AFEDRI and ALA 1530 - ELAD FDM-S1 and pa0rdt Mini Whip) is LaGarde at 582 km. Nothing from La Maddalena, Split or Sellia Marina. Only five messages correctly decoded on AFEDRI (last one Trieste I think is Mondolfo badly decoded). Worst with ELAD, only three messages received from Mondolfo (69 km).

Good Morning Dirk,

This message from, presumably, Porto Santo may explain why

HORTA has been coming in so regularly over the last few weeks.

Hello Roberto,

The reason for your poor reception might be an active thunderstorm not too far away.
Remnants can still be spotted here:

http://en.allmetsat.com/images/lightning-europe.php

There were no storms in close vicinity here and reception was much improved:

5689. Navtex Hamburg very irregular reception

Yahoo group: navtexdx (2013)
Date: 2013-07-13 12:44:43 UTC
From: pe1kel
Topic: 5689 Message: 5689

Dear readers,

What is the reason of the bad and irregular reception of Hamburg compared to other navtex stations on 518 KHZ?
It looks like Hamburg is off frequency or the shift is not stable.
Even other very weak stations are decoded very well.
The biggest problems I have with decoding is with Hamburg.

Does anybody have the same experience?

Best regards,
Adriaan.

Hello Adriaan,

I have never noticed frequency instability for Hamburg (unless there is a recent problem?). But, a phenomenon I have observed many times when receiving Hamburg/Pinneberg, occurs in the period ~ 1 hour before to ~2 hours after sunset. At relatively close distances from the transmitter (mine ~460 km, yours probably a bit less) the ground and skywave signals can interfere with each other up to the point of total cancellation. This can last from seconds to minute or so, then the signal returns again for a few minutes, take a nose dive again, and so on. Later on, sky wave will start to predominate.

Below is an example from the log on May 31, 2013, ~ 1/2 hr before sunset on that date, and the same message 4 hours later in the 23:00 time slot.

Regards - Dirk

Hi Roelof,
Thanks for your reply.
Usually I monitoring lightning on this site:
http://www.sat24.com/
I think my situation not depends only from thunderstorms, are two days
that I have a great noise over MW band and don't understand where come from.
Today's weather same of yesterday.
Hope better reception than last night.
73
Roberto

5692. 8416.5 KHz Iqaluit

Yahoo group: navtexdx (2013)
Date: 2013-07-14 08:14:32 UTC
From: DirkCL
Topic: 5692 Message: 5692

Hi All,

bored by the propagation conditions on 518, I monitored 8416.5 last night and could log Iqaluit.

Time of reception corresponds to the announced schedule:

0330 8416.5F1B (Iqaluit) Narrow Band Direct Printing (NBDP)
☐ METAREA bulletins for areas 100 to 108, 111 to 142, 153, 154, 170 to 173, and 175 to 177.
☐ NAVAREA warnings for NAVAREAs XVII and XVIII.

as found in the following interesting document:

<http://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=2&cad=rja&ved=0CDQQFjAB&url=http%3A%2F%2Fwww.ccg-gcc.gc.ca%2FRAMN2012%2FAtlantic%2FPart2&ei=clniUcyvEcT1OY3ggJgP&usg=AFQjCNGKJ0PEi2uxwFtBGcddJd-VpGRmfA&sig2=BJVUzKHYS9EmcFQHqTiIXg&bvm=bv.48705608,d.ZWU>

Regards - Dirk

Hello Roberto,

Your area looked really bad last night, static wise!
There was excellent propagation from Canada, but due to high static, no decodes here!

Daily log:

5695. Re: Navtex Hamburg very irregular reception

Yahoo group: navtexdx (2013)
Date: 2013-07-14 19:16:15 UTC
From: pe1kel
Topic: 5689 Message: 5695

Hello, Dirk.

Thanks for your reply.
That is a little bit new for me that in short distances there will be some interference from both paths which results into zero-signal in the mediumwave-band.
But if this could be the reason I wonder what is responsible for this phenomena.
A layer, temperature, an atmospheric duct?
I will investigate Hamburg in special.

Best regards,
Adriaan.

Hi All,

I have just extended my long wire about 2 M on the top end and this is

the first night's log.(over 1500 Km)

No obvious improvement !

Bahrein is fairly rare recently but Portsmouth, USA, has been received

four or five times in the last few days.

All the rest are " regulars "

I am playing with a cheap SDR dongle but it needs an

up~converter to get below 40 MHz.I have built a crude one

but I think I will do better to splash out 42 Dollars to

buy a " proper " one !

I will let you know how I get on.

Cheers

Bob

Hi Adriaan,

A few figures to illustrate the effect.

Wavelength @ 518KHz = ~600 meters.

To cancel out the ground wave, the refracted wave needs to be "delayed" somehow by 600/2 = 300 meter, causing a phase shift of 180deg. The path length of the refracted wave can be calculated to check the ballpark figures. Values below are for my QTH, 460 km from Hamburg.

-Distance travelled for the groundwave = 460 km
-Assuming a flat earth, a half-way refraction point at 230 km and a E-layer height of ~100km, we get a skywave half-path
length of SquareRoot(100^2 + 230^2) = ~250 km or ~500km for the full pathlength of the refracted wave, a difference of ~40km with the groundwave, a multiple of the 300 meters needed to cause cancellation!

But what is the phase of the sky wave relative to the ground wave?
The exact path length for the above calculation for an E-layer height of 100km is 250.798 km x 2 = 501.596 km. Now, if we do the same calculation for a E-layer height of 101 km, we get 502.398 km or a difference of 0.802 km, which is a span of more than one wavelength. Somewhere in between will be a point where the sky wave will be 180 deg. out of phase with the ground wave. As the E-layer height can vary considerably (100..120km or more, depending on conditions, season, etc...), multiple heights can cause cancelling.

Regards - Dirk

Hello Roelof,

Yes indeed static free and your log to the east was excellent last night.
Thanks for all your propagation info in various forms, all noted and very interesting, keep them coming.

Best regards,
Mike

5702. Navtex Report from Central New Jersey

Yahoo group: navtexdx (2013)
Date: 2013-07-16 12:11:39 UTC
From: George
Topic: 5702 Message: 5702

Log from Cream Ridge, NJ of an overnight run to test a revamped computer/receiver/antenna configuration. Stations listed below were uniquely identified by YaND and had clear beginning and ending sequences "ZCZC " and "NNNN" along with uninterrupted intelligent continuity in their text. Also possibly heard but not listed below, were ZBM Bermuda, NMR San Juan, and NME Charleston but as yet do not have confidence in my ability to identify stations by message content alone. Need more experience in Navtex listening. Am "gaining on it" but ...

Hello all,

The Kyoto Dst is now positive and this indicates much improved reception
from the north as I found 8 decodes from Archangelsk!

Hi Roelof,

Wow! Very early for the season - and not a trace here.
I noticed that time of reception was almost exactly halfway the 4 hour darkness period for Archangelsk.

Regards - Dirk

5712. Re: [navtexdx] NDB interference !

Yahoo group: navtexdx (2013)
Date: 2013-07-21 11:33:07 UTC
From: bob.blodge@...
Topic: 5710 Message: 5712

Hi All,

It may be that I have not noticed it before, but since I put the 2M extension

to my long wire, I have a curious "intereference" signal.

If I look at the SPECTRUM display on YaND, midway between the 2 peaks

on some signals there is a very small "pip" that occurs every few seconds

and is smoothly changing in amplitude to a definite pattern..

If I turn the speaker on, I get a very faint morse signal ARD, presumably an

NDB..

This apparently comes from an airport near the town of ARAD in Romania

and is transmitted on 517 KHz !

Has anyone else found this ?

Regards

Bob IOW

Hello Bob,

Yes, ARD-317 is audible here every evening and also JBR-317 from Hungary.
I have never noted that these NDB's corrupt NAVTEX messages in any way.

Best regards,
Roelof Bakker

Hi Bob,

ARD is a regularly seen/heard here as well. I found it to be harmless on narrow-IF (400..600hz) receivers though. On standard SSB voice bandwidth receivers (i.e. ~2.2 KHz), it may lower the receiver's sensivity somewhat because the carrier peak will fall within the IF window and influence the AGC.

Best regards - Dirk

From: hans_juergen_karius
Topic: 5716 Message: 5716

Arkangelsk with few several clear decodes is remarkable I think in a noisy band as is typical of summer. The ALA1530 was turned East <--> West. If turned South <--> North the Italian stations come up strongly.
Let's enjoy the sunshine and the warm wx.

Hello all,

It is a month since the summer solstice and there are signs that
propagation is changing already.
Around the summer and winter solstice the time of the daily solstice of
the sun is changing relatively fast.
In winter the daily solstice is moving in time backward and in summer it
is just the other way round.
The result is that sunset is now about 20 minutes earlier, however sunrise
is now 30 minutes later.

daily log:

from last night. Plus of course the usual ones. Sometimes a few more Greek stations can be received. Sometimes a few more Turkish stations. And also a faint signal from Cyprus Radio was there.
Yes, conditions are a bit improving with the longer nights. But T/A at this time of the year from my locations is unimaginable, what a pity. ;-)

Hello all,

Despite the continuing thunderstorms over Europe, some quite unseasonal stations up north could be logged: Bjuroklubb and Bodo.

Also fair conditions on HF.

Regards - Dirk

Hello all,

Conditions were not too bad, really!
It is interesting to note that Archangelsk was received once more.
I also found an impeccable and long decode from VON, St Johns, CAN.

Kerkyra has been a daily guest for ages, however the last week I have seen
more decodes from Limnos.
Last night Kerkyra was not found in the log.

Daily log:

Hi all,

Wanted: thunderstorm-insensitive antenna :0)

And there's no end to it yet...

Regards - Dirk

Hello all,

Horrific static due to passing thunderstorms.
It was so bad that even semi locals like Niton (E), Cullercoats and
Pinneberg produced a lot of UNIDS.
After 00:00 UTC static calmed down a bit, it seems.
I was quite a surprise to find decodes from VON, St Johns, CAN and VCO,
Sydney, CAN!

So, how bad it might look, it is always worthwhile to switch the radio on
and run YaND!

Daily log over 1000 km:

Hi Roelof,

Remarkable! I guess the thunderstorms were heavier over here. When I went to bed last night around 01:00 local, the Perseus S-meter was *constantly* at S9+ with the overload indicator flashing every second or so. It was so spooky I decided to disconnect all antennas.

Regards - Dirk

Hello Dirk,

I have lived in other parts of the country where heavy thunderstorms were the rule rather than the exception.
Moving to Middelburg, it became apparent that the residents had a rather relaxed attitude toward these natural phenomenon.
Living here for the last 35 years, I now understand it.

Being close to the sea, approaching thunderstorms from the south (the main direction) simply don't have enough energy build up to play havoc.
They have to cross the Westerschelde eatuary as well, which also helps.
So as usual no heavy lightning locally, but lots of rain instead!

73,
Roelof

Hello all,

Lots of static once more.
I found a couple of decodes from Archangelsk, so the northern path is
opening up, it seems.
Also Saudanes from Iceland has been active lately after a long absence.

5733. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-07-30 10:24:08 UTC
From: Roelof Bakker
Topic: 5062 Message: 5733

Hello all,

Propagation from Canada was not too bad, as I logged my first NDB over
5500 km.
However, this was around 03:00 UTC when the static from the east had faded
out.

On NAVTEX the story was quite different and I only logged a very, very
scrambled message from VON for T/A.

Daily log:

5734. Re: [navtexdx] Re: Navtex Log from Isle of Wight

Yahoo group: navtexdx (2013)
Date: 2013-07-31 11:05:26 UTC
From: bob.blodge@...
Topic: 5348 Message: 5734

Hi All,

After 3 or 4 nights of almost continuous storm interference, last night

was almost back to normal.

These are the " over 1500 " stations.

20130730 2055 518 $03F TAL Antalya,TUR 2966

20130730 2119 518 $03I TAN Izmir,TUR 2559

20130730 2135 518 $03J LZW Varna,BUL 2294

20130730 2144 518 $03K SVK Kerkyra,GRC 2031

20130730 2151 518 $20L UGE Arkhangelsk,RUS 2836

20130730 2209 518 $03M 5BA Cyprus,CYP 3235

20130730 2210 518 $01N LFO Orlandet,NOR 1552

20130730 2240 518 $03Q 9AS Split,HRV 1545

20130730 2323 518 $01U ESA Talinn,EST 1872

20130730 2335 518 $03G ICH Sellia Marina,ITA 1910

20130730 2351 518 $01X TFA Grindavik,ISL 1951

20130731 0010 518 $19B LGP Bodo,NOR 2029

20130731 0038 518 $03D TAH Istanbul,TUR 2490

20130731 0050 518 $02F CTH Horta,AZR 2541

20130731 0111 518 $03H SVH Irakleion,GRC 2751

20130731 0120 518 $02I EAL Las Palmas,CNR 2693

20130731 0154 518 $03L SVL Limnos,GRC 2402

20130731 0223 518 $03O 9HD Malta,MLT 2090

20130731 0224 518 $04O VON St.Johns,CAN 3690

20130731 0229 518 $03P 4XO Haifa,ISR 3567

20130731 0323 518 $04R NMR San Juan,PTR 6754

The San Juan was very poor but identifiable (just !)

For some reason Horta and Malta have recently become

" regulars ". Pesumably a lot of this sort of effect is

simply due to coincidence that more local stations have

not been on the air at this time.

Varna Radio has not mentioned CONSTANTA for some weeks

and Porto Santo seems to have disappeared.

Setup is still " long wire, tuned preselector, Palstar R30

and YaND 6.1 " (the first half of last night used the old

Eton E5 which has now recovered from its " water bath ")

Regards

Bob

5735. Re: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)

Hello all,

Quite good propagation from the north, and the first T/A of the season from my QTH: a perfect decode from St. John's.

Regards - Dirk

5736. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-07-31 20:38:19 UTC
From: Roelof Bakker
Topic: 5062 Message: 5736

Hello all,

I found a long string of messages from Archangelsk and also a genuine message from VON, corrupted by 4XO, Haifa and labeled as such!

Daily log:

```
20130730 2030 518 $02D EAR Coruna,ESP 1283

Hello Roelof,

Could it be that you have not copy/pasted the entire message?
Yand will only override a perfect header when it sees a globally unique identifier in the message. For Haifa, "ISR AUTH" comes to mind.

Regards - Dirk

Hello Dirk,

Yes, it was quite a riddle untill I spotted Haifa!

The band is very quiet at the moment and reception from the east is not
too bad.
It will be interesting to see what comes up.

Listening on the band, autumn seems to be just around the corner.
However, at 30 C today and still 27 C now, it is hard to imagine.
Just one more hot day, before it cools off!

73,
Roelof Bakker

Hello all,

Yesterday evening the band was nice and quiet and static was low.
Unfortunately a large thunderstorm developed over the North Sea off the
Norwegian Coast near Bergen.
The accompanying static corrupted weak signal reception.

Hello Bob,

Excellent reception of VOK!

I have looked at my PERSEUS overnight recording and though the signal is clearly visible, it is too weak for a proper decode. My window of reception from the west closes still a bit too early for reception of VOK in the 03:50 UTC time slot, I guess.

73,
Roelof Bakker

Hello all,

Propagation was good, however static was spoiling the fun.
The major source was located over the northern part of the North Sea and
did not disappear overnight, which is oftne the case when located over
land.

From: DirkCL
Topic: 5348 Message: 5747

Hi all,

The only noteworthy event from last night was reception of Arkhangelsk. For my QTH, this is quite early for the season.

The signal must have been very strong, as can be seen in the first message which starts with a garbled fragment from Rogaland in the same time slot. Rogaland is at 800km over a sea path and Arkhangelsk at 2500 km over a land path!

Regards - Dirk

Report from : Dirk Claessens
QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver : Perseus SDR, Lowe HF225
Antenna1 : paOrdt Mini-Whip @ 5m
Antenna2 : lz1aq/paordt 1mtr wideband loop
Navtex-Decoder : YaND 6.3

Hello Dirk,

This is interesting.
I found two messages from Rogaland interspersed a long string from
Archangelsk!

5751. The Sun's Magnetic Field is about to Flip

Yahoo group: navtexdx (2013)
Date: 2013-08-06 08:09:25 UTC
From: DirkCL
Topic: 5751 Message: 5751

News from NASA:

August 5, 2013: Something big is about to happen on the sun. According to measurements from NASA-supported observatories, the sun's vast magnetic field is about to flip.

"It looks like we're no more than 3 to 4 months away from a complete field reversal," says solar physicist Todd Hoeksema of Stanford University. "This change will have ripple effects throughout the solar system."

I would like to sell my R75.....

Very good condition with P/S and manual.

Comes with the following filters installed.

FL - 272 (9mhz / 2.4khz) SSB
FL - 53A (455khz / 250hz) CW
FL - 101 (9mhz / 250hz) CW

Asking price is $475 CDN + shipping from FN85ij

If interested please contact by private email to vmath@...

Cheers - Vernon - VE1VDM

5754. Carrier

Hi Roelof,

I see a very weak carrier on 518.085 with the loop pointing 30 North, Perseus in mode RTTY. Very noisy here though because of thunderstorms.

Regards - Dirk

5756. NAVTEX from Zealand, HOL

From: Roelof Bakker
Topic: 5062 Message: 5756

Hello all,

The carrier on the upper shift, 518.085 kHz is still on.
It is partly attenuated with the current settings of my phasing system.
I will try to find a better setting that will attenuate it and also my
local noise.

AS there was still some static last night and T/A propagation wa snot
greta, it is a bit early to tell if it will destroy DX reception
completely.

I will wait and see!

Roelof,

With the static gone, I can confirm the carrier, exactly on 518.085 as last year, and in daytime. The signal on the whip is somewhat stronger than on the loop. I'll try to take a bearing.

BTW, last night (on the loop), I catched a perfect decode of VOK Labrador.

Regards - Dirk

Hello all,

The good news today is that the carrier on 518.089 kHz has gone!
This morning at 04:30 UTC it was still on, so my overnight catches have suffered, I guess.
However, static has been severe once more, so not much will have been gone missing!

Hello Roelof,

Same here. I could take a bearing yesterday evening.
Direction was exactly N/S from my QTH, and signal peak was ~12dBm above noise floor on the whip.

Having not heard much of anything from Hawaii on 518 since May, it put in a big signal here this morning! The prop has turned for the better perhaps! Fall is getting warmed up to return!

From: Roelof Bakker
Topic: 5062 Message: 5762

Hello all,

Sometime ago, I have ordered a cheap USB sound dongle like this one:

http://tinyurl.com/kr9nbkq

The cost is a couple of Euros.

Last night I have been using it with YaND.
The headphone out was fed back into the mike input by a short audio patch
cable with 3.5 mm stereo connectors.
It worked like a charm.

Depending on the number of free USB slots on your PC, this might be a
cheap and trouble free alternative to VAC.
Or have I missed something Dirk?

Another night with good T/A propagation but ongoing static!

Hi Roelof,

I'm assuming you have connected the headphone output of your standard sound card to an input of the USB-sound card?
In that case you indeed don't need VAC.

You should check Yand's calibration again. I have done the same in the past by patching the headphone/microphone connectors from the standard sound card, and have noticed substantial differences in calibration when compared to VAC. As the primary sound source is Perseus in both cases, the reason for the difference must be VAC.

Regards - Dirk

Hello Dirk,

The beauty is that these cheap devices are full duplex.
I use the headphone output for the Afedri SDR and the mike input for YaND.
These are linked with a patch cable.

The tip for checking the calibration is a good one.
It appeared to be just a tiny bit off compared to my EMU 202!

73,
Roelof

Hello all,

Good propagation from the north, with lots of messages from Archangelsk.
However mediocre T/A conditions.

Daily log:

1. As you probably know, messages from San Juan come in like this section last night,

each " paragraph " usually starting with AMZ.. This particular one also contains Mona Passage. Both of these identifiers are in my Keywords.

Unfortunately, again as last night, I get a poorly received message with a long line of

meaningless rubbish, but containing the dreaded AMZ and the message is logged as

from San Juan and YaND will not let me change it !

Last night's one was from one of my "locals" !

Is there any way in which I could use AMZ but in a more realistic manner ?

2. All the messages that I get from Sellia Marina come with the B1 as " V " but are

logged as " G ". Would it be possible for me to change this ?

3. Is there any way that an idiot like me could modify the Stations List to include

the identification for Porto Santo, which I believe is a " P " station ?

Incidently, Labrador VOK must have increased their output power or are using a directional antenna pointing to the UK !

It is strange how this sort of things happen, I had a good run from Boston and from Miami afew weeks ago, but they stopped as suddenly as they appeared !

Kind regards

Bob I,O,W

5770. Amazing receptions in northwest germany

5772. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-08-13 09:59:55 UTC
From: Roelof Bakker
Topic: 5062 Message: 5772

Hello all,

Yesterday evening the carrier on 518.089 kHz was back (and still is).
Though long distance reception is not completely impossible, it imposes a
threshold of the weaker signals.
It might be interesting to see which stations can override it!

Daily log:

Hi Bob,

Setting AMZ as a keyword is a very bad idea: it is simply to short to be unique. Keywords in general (and especially the UIDs) must be at *least* 6 characters long. My advice is to delete AMZ from the list.

Regards - Dirk

Hi All,

After 2 months without email address available, I have solved the problem with the provider.

If you need to send me a direct mail, you must use now : vlecler@...

Thanks and enjoy summer !

Hi Vincent,

This message was also put into moderation as "possible spam" by Yahoo...
When I looked at the raw source, I noticed that something was attached to the message (perhaps a small logo or something). Maybe Yahoo doesn't like that.

Your other "Mixlog" message had nothing attached to it and came through normally.

Regards - Dirk

Hello Dirk,

Thank you for the bearing.
I believe that it is the same source as last November.

I can phase it out, however this renders NDB reception useless lower on the band.
As I have purchased a second phasing device (a NCC-1), it will be possible to solve the problem.
I just need a power splitter on my mini-whip and on the loop, feeding the two phasers!
The output of one phaser goes to the PERSEUS, the other to the AFEDRI SDR.

The NCC-1 has no BNC connectors, but phono and F type.
I have ordered some addapters F to BNC and when these arrive, I will try how it works.

Anyway, things are getting a bit complicated, I'm afraid!

73,
Roelof

Forget it. The attachment was a .eml-file from Yahoo containing the raw source of your message, in which I discovered the following lines:

X-Received: from pcVincent (unknown [92.61.136.115])
(using TLSv1 with cipher AES128-SHA (128/128 bits))
(No client certificate requested)

, an encrypted connection apparently sent from your mobile device.

Is this the reason the message was put into moderation? I don't know, but your other "Mixlog" message was sent "the normal way".

Regards - Dirk

Hello all,

Still limited reception due to a carrier on 518.089 kHz.
The good news is that the local noise that obliterated the NDB band has gone!

However, Murphy's Law fully applies as it is still received on my loop antenna.
I can more or less phase out the carrier at the cost of a higher noise floor, due to noise pick up on the loop.
I have found a compromise setting, which reduces the level of the carrier by 3 dB.
However it is still 18 dB over my noise floor.

Hello all,

The carrier on 518.089 kHz is still on.
However, I have now been able to phase it out completely without sacrificing the low noise floor of my mini-whip.

At present my active loop is mounted on a non metal pole, which rests in a heavy cast iron parasol stand.
Dragging this contraption around the garden, I found a spot where the carrier came in nicely and the noise floor was quite low. Nulling the carrier with the loop increased the noise floor quite a bit, so this is not a good idea.

The mini-whip output is now fed into a two way splitter with 3 dB loss, which is no problem as both the Afedri and PERSEUS have enough sensitivity. One output of the splitter is fed into the PERSEUS.
The second port is connected to the main antenna input of the MFJ1025 phaser. The noise antenna input is connected to the active loop. The output of the MFJ1025 goes via a rf isolating transformer to the Afedri SDR.

This system works beautifully. The carrier can be phased out completely and there is no noise ingress in the PERSEUS, which is used for NDB reception.

Unfortunately, the Kyoto Dst dropped to -31 last night and propagation from the north was poor.
No trace of T/A stations was found, however both Las Palmas and Horta made it!

Hello Roelof,

I wonder if my UNID below could be NMR ? perhaps you would be so kind to compare with your logging from last night.
My logs from last night were posted earlier but have not made it on to the list, perhaps because I showed 9 messages from Ismailia. (Done that before but it slipped my memory!)

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: Softrock Ensemble II
Decoder: YaND 6_3D.
Computer: Dual CPU 2.2Ghz, RAM 2.00GB with
external soundcard (Behringer UCA202).
Antenna: PA0RDT miniwhip circuit 7m agl

Hello Mike,

This is certainly NMR.
Due to the long winded weather messages, it is very common to find a part that is interrupted by nearby stations.
You can look for any information indicating NMR, such as < CARIBBEAN WATERS OF PR > , wind speed in < KT > and wave height in < FT >. This and the extended timeslot from 03:00 UTC to 03:30 UTC or beyond, are making it likely that this staion is NMR!

73,
Roelof, pa0rdt

Topic: 5062 Message: 5791

Hello All, Returning after 4 weeks break I find good copy from Ismailia (9 messages) which is encouraging. I have changed my receiver from IC735 to my Softrock Ensemble II as an experiment, see how it goes.

Hi Mike,

Indeed, your message was thrown into moderation by Yahoo and I had to approve it. I'm unsure whether repeating the same station name is the cause. Yahoo is behaving picky again, it seems.

Regards - Dirk

P.S. I had the loop pointing North last night, hoping to catch Arkhangelsk and Bodo, which I did. But I probably missed NMR :0)

Hello Dirk,

I have not been able to make an accurate bearing on the carrier on
518.089 kHz.
However, the coarse direction is north.

Now something interesting.
Knowing the results of your loop directivity or rather the lack of it on
long range signals, I assumed that this also applies to my phased
antennas. As Bodo has been a regular lately, despite the offending
carrier, I found it a bit weird that you did receive it and I did not.

So, I rerun the 00:10 UTC timeslot PERSEUS recording, which used my
mini-whip as antenna.
The carrier is about 20 dB above the noise floor.
Non the less, I had excellent copy of Bodo.

Apparently a phasing system consisting of a loop and mini-whip does
maintain its directivity for all distances.
This is contrary to your findings of the directivity of a loop antenna
on its own.

This can be considered as a blessing or a curse depending of the use of
a phasing system.
It produces a single deep null, which might be usefull to attenuate
local noise as I do or a nearby strong local station.
One should be aware though that the null effects all stations nearby or
far away in that direction!

73,
Roelof

Hello Roelof, Dirk and All,

Tonight on miniwhip antenna I am receiving a continuous carrier on 518.088 khz. Signal strength is greater than ARD sidetone but QSB sometimes fades the carrier out for short periods. I did not notice this last night or daytime today but you have now made me aware and I will observe further.
Unfortunately I have no rotating loop up at present but I could get the ALA100M going again pretty soon which might be useful together with your bearings.

73,
Mike

5796. Keyword Schoodic

Yahoo group: navtexdx (2013)
Date: 2013-08-18 00:28:15 UTC
From: George
Topic: 5796 Message: 5796

Dirk: re: possible addition to your keyword list ... "Schoodic" ... perhaps sufficiently unique in spelling to provide a keyword for VAR-9 Fundy (Yarmouth) in Area 4.

See message text below. YaND did not identify the station ... no unique identifier nor (seemingly) unique word in the text. But line 4 (message below) begins the meteorological forecast for "Eastport to Schoodic Point Me" which would match the coastal region "Eastport-Schoodic Point" near the mouth of the Bay of Fundy with VAR-9 sited some 50 miles or so up the coast to the northeast. Also the transmission is in the time slot ("U") allotted for VAR-9's transmissions. Hence I have logged the station as originating from the Canadian Coast Guard station 'Fundy' (VAR-9) in New Brunswick Province, Canada. [Or is there insufficient info to make this assignment?]

Hello Roelof,

We have a misunderstanding: what I observed with my loop is that the nulls disappear at night for stations CLOSER than ~800km. Stations farther away seem not to be affected. Since the carrier is "only" ~10 dBm over noise here this could explain why I received Bodo @1800km with the loop pointing north?

2013-08-17 00:16:50> ZCZC BA20
2013-08-17 00:16:54> 1315~5 UTC AUG 13

2013-08-17 00:17:07> [CHART]   87BARJA MMMJW~PJJCW~HONONPJSWMSF~DH
2013-08-17 00:17:12> ~~Z~Y~~F~{}UNLIT.

The ideal station to verify the disappearing nulls is Pinneberg (@460km), because its time slot is only shared with Surt,Lybia which is not operational. In daytime, I can null it out completely here: Yand simply stops and only a very faint trace is seen on Perseus' waterfall. But after dark Pinneberg is received perfectly again.

Unexplained is the fact that I can null out the offending carrier day AND night, contradicting the effect seen for Pinneberg. I can only guess that this is because the source is very close to us and that other propagation effects are in play??

Finally: could your ideal QTH near the sea have an effect on all this? I wouldn't be surprised. This is tough stuff.

Regards - Dirk

5799. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-08-18 09:15:50 UTC
From: Roelof Bakker
Topic: 5062 Message: 5799

Hello all,

I have done the same test with Bodo as yesterday.
It produced 3 faultless decodes on the mini-whip, overriding the offending carrier on 518.089 kHz.
Nothing was found on the phased loop and mini-whip.
Orlandet and Talinn were also missing, so it seems that propagation from the north is suffering.

The overall system sensitivity seems to be excellent, as I did receive five decodes from Sydney, CAN NL.
A band scan for Canadian NDB's revealed that T/A conditions were not very good last night.

The question is why a loop does not provide a stable null on distant stations and a phasing system consisting of a loop and mini-whip apparently does this very well.

Daily full log, so you can see which regular stations are missing:

Hello Dirk,

Thank you for the correction!

I will watch Pinneberg and phase it out at daytime and check at night
what happens!

73,
Roelof

5804. Re: [navtexdx] Log from Isle of Wight

Yahoo group: navtexdx (2013)
Date: 2013-08-18 18:37:53 UTC
From: bob.blodge@...
Topic: 5062 Message: 5804

The early evening yesterday was full of electrical storm noise,

but this was my " Over 1500Km" catch starting after this had

died down.

20130817 2004 518 $01N LFO Orlandet,NOR 1552

20130817 2051 518 $02F CTH Horta,AZR 2541

20130817 2131 518 $03J LZW Varna,BUL 2294

20130817 2155 518 $20L UGE Arkhangelsk,RUS 2836

20130817 2202 518 $03M 5BA Cyprus,CYP 3235

With a good location, a simple lomg wire, a not marvelous

receiver and ,most important, a sharply-tuned preselector,

can produce results that expensive, highly complicated SDRs

have difficulty in achieving.

That's progress

Cheers

Bob

5805. Re: Keyword Schoodic

From: DirkCL
Topic: 5796 Message: 5805

Hello George,

A 100% correct analysis and thanks for the new keyword; Fundy/VAR-9 is only rarely received here in Europe.

Regards - Dirk

--- In navtexdx@yahoogroups.com, George <geoMtemp@...> wrote:
>
>
>
> Dirk: re: possible addition to your keyword list ... "Schoodic" ... perhaps sufficiently unique in spelling to provide a keyword for VAR-9 Fundy (Yarmouth) in Area 4.
>
>
>
> See message text below. YaND did not identify the station ... no unique identifier nor (seemingly) unique word in the text. But line 4 (message below) begins the meteorological forecast for "Eastport to Schoodic Point Me" which would match the coastal region "Eastport-Schoodic Point" near the mouth of the Bay of Fundy with VAR-9 sited some 50 miles or so up the coast to the northeast. Also the transmission is in the time slot ("U") allotted for VAR-9's transmissions. Hence I have logged the station as originating from the Canadian Coast Guard station 'Fundy' (VAR-9) in New Brunswick Province, Canada. [Or is there insufficient info to make this assignment?]

From: Vincent Schriel
Topic: 5806 Message: 5806

Like last year, as you all know, there is a carrier spoiling Navtex. For me it's located east/west from Rotterdam, the same as last year.

http://www.schriel.nl/Perseus-20130819-Rotterdam-east-west.PNG

I run YaND this night, but nothing > 1000 km.

Hello Vincent,

Yes, the carrier is back on for over a week now.
It is the same as last year November / December.

I have phased it out at the cost of reception from the north.

5810. More experiments on loop behaviour at night

Yahoo group: navtexdx (2013)
Date: 2013-08-19 14:12:01 UTC
From: Dirk Claessens
Topic: 5810 Message: 5810

Hello all,

This is a long post....
I have again set up 2 systems on 518KHz.

1/ Pa0rdt whip + Lowe HF225
2/ 1m loop + balanced preamp/feedline + Perseus

- The loop was pointing 300/120 (Canada/Eastern Med), effectively nulling out the rogue carrier on 518.087.
- The Whip/Lowe setup serves as general reference: was there propagation or not from a particular station?

I have concentrated my investigation on Pinneberg and Orlandet because both stations are on or quite close to the nulls of the loop, and at distances of 460 and 1400km respectively.

I could again find hard evidence that:
1. The null for Pinneberg (@460km) is not present at night, and re-appears ~2.5 hours after sunrise

2. That the null for Orlandet (@1400km) is present

I could log Ismailia and Bahrein as "first in season" last night, but only on the loop. Signals on the whip where very likely hampered by the carrier on 518.087.

See below for all details.

Regards - Dirk

==========PINNEBERG03:00 TIME SLOT==========
no discernible difference : loop = whip
==> there is no null present on the whip at this distance (~460km)

5812. Re: More experiments on loop behaviour at night

Yahoo group: navtexdx (2013)
Date: 2013-08-19 14:50:44 UTC
From: g3gms
Topic: 5810 Message: 5812

Hello Dirk,
Thank you for your interesting post. My own tests with ALA100M 4m wire loop certainly show the same null behavoir as you have given, which I found disappointing for my purposes to null out pests in the 300/600km distances at night time. Nulls on DX distances remain effective as expected but not what I am looking for!

By the way I hope to get a loop up to check the 518.088khz carrier tomorrow but as the carrier is only heard at night time and the distance is probably in the 300/600km distance range I may have difficulty getting a null..... we will see.

Best regards,
Mike
g3gms

5813. Guam?

Yahoo group: navtexdx (2013)
Date: 2013-08-19 22:54:20 UTC
From: Vincent Schriel
Topic: 5813 Message: 5813

I changed to 12.579,1 kHz for Navtex. This is what I received this evening:

```
YYYYMMDD HHMM KHz ID CALL STATION,COUNTRY DIST (Km)

From: Dirk Claessens
Topic: 5813 Message: 5816

Hi Vincent,

Yes, definitely Guam, and perfect copy!

You might also check 12579 at 11:00 UTC for Vladivostok. See below for a log extract.

Regards - Dirk

Thank you for the confirmation Dirk. I will use the shortwave for as long as the carrier on 518 is active.

Is there a reason that you didn't use the shortwave on YaND? Besides the missing of the frequenties is also the recognition not wroking for the most stations.

This a log form today of 16.806,7:

```

Hello Vincent,

I have only implemented the "real" Navtex frequencies 490/518 because station ID-letters are worldwide assigned by the WMO for this frequencies. This is not always the case for HF. Only the USCG and a few Russian stations consistently use the same letters for both 518 and HF.

- Istanbul uses B on 490, D on 518, but M on 4209.5
- Strict message formatting (ZCZC <message body> NNNN) is not required on HF, so message separation becomes problematic.
- As a last example see one of your UNIDs below. The originating station is $04F Boston, but it mentions LITHUANIA and BALTIC SEA!
USCG stations can potentially re-broadcast marine info from all over the world in their hydrolant messages, making ID-ing a nightmare.

That's the story...

Regards - Dirk

5821. Carrier 518 kHz

Yahoo group: navtexdx (2013)
Date: 2013-08-21 09:59:35 UTC
From: Roelof Bakker
Topic: 5062 Message: 5821

Hello all,

I have tried to make a precise bearing and it appears to be about 24
degrees north.
From my location this skips the coast passing over Den Helder.
Dirk, how does this agree with your bearing?

It is difficult to take a bearing on the null, due to local noise.
So I have made two bearings which gave a signal level of -110 dBm and
then interpolated the direction in between.
There are no PERSEUS servers on close to Den Helder, so I can't check it
at the moment.

I have no time at the moment to go fox hunting the culprit, unfortunately.

73,
Roelof Bakker

Hello All,

Hearing a carrier on Saturday and Sunday night times on 518.088khz using miniwhip, I tried searching with my 4m wire loop and ALA100m on Monday and Tuesday evenings but unfortunately the signal did not reappear to allow me to take a bearing.

Best regards,
Mike Thayne

Hi Roelof,

Bingo. I have made an azimuth scan of the carrier with the loop and have then overlayed the resulting plot in Google Earth. Your 24 deg. bearing is also shown. See attachment.

As you can see both measurements point to Den Helder...

Our relative signal strengths (mine 10dBm over noise, yours 15) also confirm that the general direction of the source must be up north.

There we go again...

Regards - Dirk

Hello Dirk,

Thank you for the plot.
It looks like it is coming from Den Helder.
I have family living in the north of the country, however it will be end September before my next visit.
However, last year I was 30 km from Den Helder and good hear nothing at all.
Vincent gives an East/West bearing.
What we need is a third bearing from the centre of the country.

> Our relative signal strengths (mine 10dBm over noise, yours 15) also
> confirm that the general direction of the source must be up north.

Yes, my phasing system produces a single null and that is aiming north.

73,
Roelof

That has me puzzled too. I wonder if Vincent could have made the error I've made many times myself: forgetting to add 90 degrees to the bearing of the null??

Regards - Dirk

5830. Nice surprise for me this morning

Topic: 5348 Message: 5834

Hi all,

Logs from the last 2 days, all from the loop pointing 300/120. I could log a very short fragment of Labrador this morning.

Arkhangelsk must have been strong, being almost broadside of the loop.
(decoding quality on the whip was substantially better though)

Regards - Dirk

Report from : Dirk Claessens
QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver : Perseus SDR, Lowe HF225
Antenna1 : paOrdt Mini-Whip @ 5m
Antenna2 : lz1aq/paordt 1mtr wideband loop
Navtex-Decoder : YaND 6.3

5838. No logs from me next week and new azimuth scans

Yahoo group: navtexdx (2013)
Date: 2013-08-24 15:34:14 UTC
From: Dirk Claessens
Topic: 5838 Message: 5838
Attachments: 2 described; binary payloads are missing from this source WARC

Hi guys,

I'm off to Germany next week for a short break.

I have double-checked the north orientation of my loop with a beautiful Ipad compass app set to show true north instead of magnetic north.

I have also repeated two azimuth scans: one on the carrier and another on the signal of Den Helder.
When overlayed in Google Earth they overlap perfectly as you can see from the attachment, and point perfectly to Den Helder.

This can of course be purely coincidental, but I find it striking to see a signal perfectly aligned on the upper peak of the 518 Navtex channel to come from that direction.

Regards - Dirk

Hello Dirk,

Thank you very much indeed for the plots.
I will see if I can find someone close to Den Helder and check for the signal.

Enjoy your stay in Germany!

73,
Roelof

Hi Roelof,

I wish I had your static looking at your beautiful logs below. I have never heard Horta here. ;-)

Hello Hans,

Both Las Palma, Horta and Porto Santo were rare here as therse were
often overpowered by stations from the north.
Since I have been using my phasing system with a deep null to the north
to get rid of the carrier from Den Helder, reception from the Atlantic
Islands has greatly improved.

The same applies for stations from Spain.

73,
Roelof, pa0rdt

2013-08-27 04:12:11> MORNING.

If the header ZCZC PE88 is correct decoded, it is transmitted from Porto Santo, MDR.
However, due to its content it was flagged by YaND as Monsanto POR!
Another brainbreaker for Dirk, I'm afraid!

Hi roelof,

The hotel has wifi :o)

I'm pretty sure the header was received correctly, but MONSANTORADIO is an identifier set as unique in yand's tables. It is highly likely that Porto Santo's transmitter is controlled centrally from Monsanto. The only solution is setting monsantoradio as non-unique.

Regards Dirk

Hi Roelof,

I was just looking at the NAVTEX QSLs from the link that Raimo just
posted on the
ndblist, and I noticed that he has also some shown from Roeland
PA0RBC, who says
he works for the Dutch maintenance company for the Dutch Navy and
Coast Guard and
he verified Raimo's NAVTEX report. He may be a good person to contact
about the
interference, he seems to be based at Den Helder, and being a ham as well I am
sure he would be a good person to help find the source of this QRM.
Raimo's page
can be found here:

http://peditio.net/utility/YaBB.pl?num=1232708059/25#25

His e-mail address is listed on his QRZ.com page.

73 for now, Alan.

5849. Re: [navtexdx] Carrier 518 kHz

Yahoo group: navtexdx (2013)

From: Roelof Bakker
Topic: 5062 Message: 5849

Hello Alan,

This is of great help.
I have sent an email and asked if he can hear the carrier in Den Helder.

From Raimo's QSL, it looks like the actual transmitter site is not Den Helder, but The Haque/Scheveningen.
The Dutch Navy used to have an electronics repair facility at Den Helder though.
(They might test a TX there and boil a kettle for a cuppa!)

73,
Roelof

5850. Arkhangelsk astonishingly often last night

Hi Roelof and Dirk

I'll be in Den Helder Saturday for the day so I'll take a portable and see if I can hear anything.

Subject: Re: [navtexdx] Carrier 518 kHz

Hello Alan,

This is of great help.
I have sent an email and asked if he can hear the carrier in Den Helder.

From Raimo's QSL, it looks like the actual transmitter site is not Den Helder, but The Haque/Scheveningen.
The Dutch Navy used to have an electronics repair facility at Den Helder though.
(They might test a TX there and boil a kettle for a cuppa!)

73,
Roelof

Hello Dave,

Glad to hear you are willing to help.
There are rumours that the actual transmitting site is not located in
Den Helder, but at The Hague/Scheveningen.
It is just south of the harbour of Scheveningen.

If this is true, you should hear the signal at home, I guess.

73,
Roelof

Hi Roelof, Dave,

This is indeed confusing stuff...

I've just made an excursion with Google Streetview to a suspiciously looking delimited terrain south of Scheveningen, viewpoint was Wieringerstraat.

Lots of antennas, some of them toploaded, this could be it.
See attachment.

Regards - Dirk

Hi Dirk, Roelof

As it turns out Sunday I'll also be at Scheveningen Haven, within a few hundred metres of the masts so I reckon that should iron a few things out.

The carrier is damn strong at this location as it is. I can only get Den Helder, Oostende and Nilton overnight. Everything else is blocked.

Cheers
Dave

Hello Dave,

Glad to hear you are willing to help.
There are rumours that the actual transmitting site is not located in
Den Helder, but at The Hague/Scheveningen.
It is just south of the harbour of Scheveningen.

If this is true, you should hear the signal at home, I guess.

73,
Roelof

Hello Dirk,

Alan Gale sent this link to the NDB list.

http://peditio.net/utility/YaBB.pl?num=1232708059/25#25

On Raimo's site you will find a QSL card via PA0RBC stating the
transmitter is located in Scheveningen.
The antenna should be a T-antenna.

I have emailed PA0RBC via his email address on QRZ.com, but he has not
replied so far.
I will wait for Dave's findings and see what I can do.

73,
Roelof

Hi guys.

Just back from Den Helder. Horror 4 hour trip on the train via Utrecht. A long way around after some poor devil committed suicide on the Den Haag line throwing the rail system into chaos.

The story is.. I found Den Helder to be free of any interference. I was able to listen to some Navtex signals on 518 from the direction of the UK while spending an afternoon on the beach at Huisduinen (Den Helder). I had a Sony 7600D. While not being ideal for testing Navtex, In SSB there was nothing to indicate a constant signal. Only the odd bit of Navtex from unknown stations.

This was done in sight of the vast antenna arrays that sit at the back of the Den Helder airport.

I took some photos a few years back and I can tell you they are impressive. I'm not sure however if these military and maritime ones interest us.

http://ozclog.wordpress.com/2011/06/03/interesting-antennas/

I'm pretty confident that Den Helder is not the source. Tomorrow afternoon I'll jump on my bike and cycle to Scheveningen. Depends on how good the micro brewery before you get a report. Lol

Bill it's easier said than done. Getting close to the antennas near Scheveningen Haven is almost impossible. I tried getting close a few weeks back just to take some photos and they really make it tough. I will get within 500m tomorrow and I think I'll hear something.

73

did not bring many receptions. The business was basically done at midnight UTC. No more new stations could be received later. I have listed only the first time when I received the stations.

5863. 518 kHz last night on Northwest Germany

Yahoo group: navtexdx (2013)
Date: 2013-09-01 07:51:47 UTC
From: <dl4ybp@...>
Topic: 5863 Message: 5863

brought the ususal stations. Missing were Arkhangelsk, Haifa and stations from Spain. That would have been the usual number of stations received here at the time of the year. As on 490 kHz most stations were logged in the first part of the night.

Hello all,

I found improved propagation from the Middle East as two messages from
Qusair appeared in the log.
This has not happened for quite some time.

Daily log over 1000 km:

5866. 518 kHz Half solved

Yahoo group: navtexdx (2013)
Date: 2013-09-01 10:19:10 UTC
From: David Onley
Topic: 5062 Message: 5866

Hi guys

Just returned from Scheveningen. I actually did a bit of bush bashing and got beside the masts.. well not too close.

The signal was solid.. So strong. It's coming from here.

So the next thing is to get someone to look into it.

73

These are a few photos I took this morning in Scheveningen. It's a shame I couldn't get a bit closer.

Hello,

Can you confirm the rogue carrier is still on the air? I can't see/hear anything at the moment.

If the transmission is coming from Scheveningen I guess it's not the main NAVTEX transmitter - as it's always a good signal here in Shetland. Perhaps a standby TX powered into test load?

I wonder how widespread the signal can be received?

I'm thinking of phoning a contact at Shetland Coastguard, and asking them to make an approach to Den Helder - any info regarding the date/time the signal appeared and the approximate range it can be heard might be helpful to point them at the possible cause.

My copy of the Admiralty List doesn't specify Scheveningen as the NAVTEX TX site, but it does indicate that it's the TX site for MF/DSC, so it seems to make sense that NAVTEX also comes from that site.

As soon as I get confirmation that the signal is still there, and an idea of how long it's been there, I'll try to make the call.

Cheers,

John

Hello Dave, John,

Dave, this is excellent news!
Have you spotted a T-antenna? This is a wire antenna between two mast and a vertical downlead in the middle.
Now to find the proper person to approach without stamping on long toes!

John, the carrier is not very strong and is transmitting 24/7 on the upper shift at about 518.089 kHz.
It is strong enough to spoil NAVTEX DX reception and about 20 dB above the noise floor.
I can hear it also on G3XVL's PERSEUS, who lives in Ipswich.
I guess the transmitter / driver hangs at the upper shift.
Normal service is not suffering from this fault, unfortunately.

73,
Roelof

Thanks Roelof,

I've just started YaND on 518, to check if the normal P-slot
transmission is okay, but you've answered that question!

I'll ring Shetland Coastguard, and depending which officer(s) are on
duty, I might be able to persuade them to phone Den Helder. I did this a
few years ago, when I think OST had stuck in TX - and they got it turned
off. In this case, with a weak signal that doesn't seem to be affecting
their scheduled broadcasts it may be a bit trickier.

Regards,

John

Hello John,

Further on this subject, it has been on for weeks now and though not very strong, it might disrupt NAVTEX reception from stations from the UK for vessels close to Scheveningen.

Last year the same problem occurred during November and December and vanished before we could locate the source.
I have attached a PERSEUS screenshot.

Yes, the location of the Dutch NAVTEX transmitters have been unclear so far.
However, the site in Scheveningen is the former MF Radio Scheveningen / PCH site.
So, this makes sense.

73,
Roelof

They are short-staffed today, and didn't want to get involved with a complicated discussion with Den Helder, but suggested that I contact them myself, by email....

The Officer who would normally have been happy to help is on leave at the moment (scuba diving in the Red Sea!) - she likes talking about radio problems and especially if it involves phoning foreign coastguards...

I maintain Shetland Coastguard's radio systems, so I should be able to phrase my email to Den Helder in such a way that it carries some weight - and I'll send it from my business email account!

Sorry that my quick fix didn't bring results

John

Hi Roelof

Yeah the problem is spotting the mast. It’s a big piece of land with a lot of masts. I would really need to go back and have a big walk around. Accessing it, you have to approach from various angles. Residential and car parks through bushland. So I will try to walk the perimeter and see the antenna.

I’ll see if I can get up there again this afternoon and do some more snooping around. I’ll find the T-antenna if it’s there. BTW if you look at Google earth. Left of the Haven in Zeewaluwstraat where it meets the dunes, there is a small road into a compound. This is where the techs will hang out and do their work. Quite a few little buildings in there. I’ll look closely for names/contacts etc. Being Sunday it was all locked up.

Cheers

Dave

Hello Dave, John,

Dave, this is excellent news!

Have you spotted a T-antenna? This is a wire antenna between two mast and a vertical downlead in the middle.

Now to find the proper person to approach without stamping on long toes!

John, the carrier is not very strong and is transmitting 24/7 on the upper shift at about 518.089 kHz.

It is strong enough to spoil NAVTEX DX reception and about 20 dB above the noise floor.

I can hear it also on G3XVL's PERSEUS, who lives in Ipswich.

I guess the transmitter / driver hangs at the upper shift.

Normal service is not suffering from this fault, unfortunately.

73,

Roelof

Hi John

Thanks' very much. I'm sure with your contacts we are more likely to solve it in a nice manner. It's always better coming from someone within the family. Lol

I'm not sure what they would think if a dxer came up to the gate and rang the bell. Hehe.

Cheers
Dave

5879. Scheveningen - revisited

Yahoo group: navtexdx (2013)
Date: 2013-09-01 16:03:55 UTC
From: David Onley
Topic: 5062 Message: 5879

Have just returned from my second visit to Scheveningen. I should have spent far more time there this morning. I even discovered a cycle path running alongside one end of the field so indeed it's not difficult to see everything.

Firstly Roelof.. No T - antenna's.. but I think I have narrowed it down to 3 masts. One a suspect located on the Nth Sea side closest to the facility buildings - Haven side (near Zeewaluwstraat)

I did a lot of cross bearings. I walked the entire perimeter. Ate my way out of trouble in the blackberry bushes.

Now the interesting thing while I was there.. The radio was nearly blown apart by a Navtex transmission somewhere around 1430 – 1445 UTC.. with attenuator on I reckon we have transmissions out of Scheveningen.

I took a heap more photos and I'll put them somewhere shortly. The antenna I think that signals were coming from was one of these spider web looking configurations. And signal measurements really confirmed that it was coming from the haven side of the field.

Cheers
Dave

Okay. To be honest I have no idea what antennas these are and I would love a tour of area if it could ever be arranged. It would be nice to know what frequencies these operate on and what their functions are. I'm not sure if it's classified information. But it would be nice to have an afternoon with some techs here. If anybody knows what they are used for.. please let me know

These are all the antennas at Scheveningen. You will see a comment on one of the pics of the one I think it is. Is it a fan antenna?

http://dxaustralia.weebly.com/scheveningen-photos.html

It's a slide show so put it on play.

I believe one of the antennas is a TCI inverted cone, 1.6 MHz - 30 MHz.
http://www.spx.com/en/tci/pd-550-inverted-cone-antenna/
Another one may be a TCI conical monopole for HF.

Hard to be certain as there are similar antennas by other companies and
the wires are not so easy to view in some of the photos.

Hi Jack.. Interesting. Many thanks for that. Yes one looks like a TCI inverted cone. I have seen similar ones at Den Helder also.

It's very hard to take photos of antennas. You have to have good light and a decent camera. I only took these with a little pocket Samsung 10.2 mega pixels camera. Mind you it's a lot better than the old disposable supermarket toys. But it's difficult to get the intricate details from a distance.

Well hopefully Scheveningen can be put to bed soon and the dx for people in the Benelux can return to normal.

Thanks.

Hi Dave,

Bingo: 14:30-14:40 is indeed "Den Helder's" time slot.

Next time you go there, make a 50 cm loop of stiff wire and connect it to the 6V light bulb of a bike. Maybe you can take a bearing :0)

Thanks again!

The entry in the UK Admiralty List I have, for the NAVTEX service of
"Den Helder [P]" has the following co-ordinates:

52 05.71N
4 15.478E

https://maps.google.co.uk/maps?q=52+05.71N+4+15.47E&hl=en&ll=52.096541,4.26012&spn=0.022067,0.043731&sll=52.045312,4.257889&sspn=0.176738,0.349846&t=h&z=15

Looks like Scheveningen from that lat.long, despite not being exolicitly
listed as so.

Also listed are 4 remotely controlled sites for their A2 (2MHZ MF DSC) -
Den Helder is the controlling MRCC:

Appingedam (TX Site) 53 20N 6 52E
Noordwijk (RX Site) 52 18N 4 28E
Scheveningen (TX Site) 52 06N 4 15E
West Terschelling (RX Site) 52 21N 5 13E

No listing of an MF site at Den Helder.

For A1 (VHF) there are 14 sites, including:

Den Helder 52 57N 4 47E
Scheveningen 52 05N 4 15E

Looks like all the MF (518 and 2MHz) is transmitted from Scheveningen
and Appingedam. Den Helder only seems to have VHF.

I had the binocs, camera and radio.. and I was climbing over fences and into places I should not have been. I certainly had moments when I thought someone was going to ring the authorities. But with me standing there with a receiver waving it all over the place I guess they thought I was working there lol.

But yeah.. it did cross my mind. It was tough going at times through the damn thistles and blackberries.

That's almost cm perfect to where I was. And that Green arrow is the exact location of the mast that I suspected of transmitting the signals.

That's great..

And may I say Den Helder is located 100km+ away.

Den Helder is the maritime base in North Holland and I would suspect that's where the transmissions originate from and go via landline to Scheveningen.

Cheers
Dave

Interesting! 5 Miles from me there is a decommissioned loran c station - 625 foot antenna - it was the USCG Loran design facility and spare xmitting site. For the past few months it was being fired up for tests by a civilian company and I tried to get in but new gates all over the place and no one around. Loosing Loran C was a big mistake. Too easy to take out a GPS bird. Was surprised to see the excellent google maps detail of your towers - If it was top secret I guess google would block it out. Nice sailboats - the place harbor looks squeeky clean - how old is it. Was surprised that I only saw one person walking around the harbor.

Bill

I had the binocs, camera and radio.. and I was climbing over fences and into places I should not have been. I certainly had moments when I thought someone was going to ring the authorities. But with me standing there with a receiver waving it all over the place I guess they thought I was working there lol.

But yeah.. it did cross my mind. It was tough going at times through the damn thistles and blackberries.

Dave

Hi Dave,

If we snooped with an antenna, binocs, and a camera we would probably be "detained". Be careful out there!

Hi Roelof

Yeah the problem is spotting the mast. It’s a big piece of land with a lot of masts. I would really need to go back and have a big walk around. Accessing it, you have to approach from various angles. Residential and car parks through bushland. So I will try to walk the perimeter and see the antenna.

I’ll see if I can get up there again this afternoon and do some more snooping around. I’ll find the T-antenna if it’s there. BTW if you look at Google earth. Left of the Haven in Zeewaluwstraat where it meets the dunes, there is a small road into a compound. This is where the techs will hang out and do their work. Quite a few little buildings in there. I’ll look closely for names/contacts etc. Being Sunday it was all locked up.

Cheers

Dave

Subject: Re: [navtexdx] 518 kHz Half solved

Hello Dave, John,

Dave, this is excellent news!

Have you spotted a T-antenna? This is a wire antenna between two mast and a vertical downlead in the middle.

Now to find the proper person to approach without stamping on long toes!

John, the carrier is not very strong and is transmitting 24/7 on the upper shift at about 518.089 kHz.

It is strong enough to spoil NAVTEX DX reception and about 20 dB above the noise floor.

I can hear it also on G3XVL's PERSEUS, who lives in Ipswich.

I guess the transmitter / driver hangs at the upper shift.

Normal service is not suffering from this fault, unfortunately.

73,

Roelof

> that's where the transmissions originate from and go via landline to
> Scheveningen.

The confusion over the TX location seems to be due to the fact that Scheveningen isn't explicitly named as the NAVTEX site.

In the UK there are 3 NAVTEX TX sites : Cullercoats, Niton and Portpatrick, and they have their own timeslots (Niton has 2, of course) and are listed as separate stations. They are all , however, controlled by MRCC Falmouth, where the messages are created and sent over landline to the stations from the central server. There are also remote RXs (including one in the Ops room at Shetland Coastguard) which feed back the decoded NAVTEX over the IP network - as a check that it was radiated correctly.

The Netherlands Coastguard, only having one NAVTEX site, in one timeslot [P], must have decided not to describe the service as "Scheveningen [P]" - since there's no reason to need to distinguish between multiple sites and timeslots, covering different geographical areas.

You can liken this, I guess, to the MF DSC from Shetland - the MMSI 002320001 is used for Shetland, and most people would assume every DSC message with that MMSI came from one transmitter - but Shetland (002320001) and Aberdeen (002320004) have access, jointly, to 4 MF TX sites - and a message originating at 002320004 (Aberdeen) could be transmitted physically from one of the two TX sites in Shetland, and a message from 002320001 (Shetland) could be transmitted from a TX on the Scottish Mainland, or Orkney - and no-one would ever know unless they looked at the Server logs to see which TX was used

who'd do a thing like that ;-) ....

The seafaring users don't really need to know, or care, it's just us hobbyists that get interested in where these things are transmitted from.

Well done on the undercover espionage - I guess taking pictures from the sand dunes, of some masts and bits of wire, isn't really going to upset anyone - it they wanted to hide this installation they wouldn't put it so close to all those houses, and a tourist beach!

Cheers,

John

Thank's Bill

I think you just saw John's email.. And here I was always thinking that it was Den Helder.. Our old mate Yand telling me it was 100km away when it was actually only about 4km away.

Scheveningen is actually in The Hague (Den Haag). It's a wonderful seaside resort and has always been popular for the rich and famous. You cannot move there in summer with all the beach cafes and restaurants. It's one of the biggest tourist attractions in Holland outside of Amsterdam.

The transmitters are about 2 or 3km walk along the beach from the main resort. It's close to the Haven where they have a herring festival each year.. not my cup of tea I'm afraid. You get people coming from all around the world competing in how many herring you can eat in 3 minutes. I'm more of a chips and mayonnaise person. Lol.

But I'm always fascinated in masts and transmitters. Every time I go somewhere my mind turns to dx when I see something bigger than a mobile phone tower.

Cheers
Dave

John and Bill

A bit of useless trivia about Scheveningen.

During World War II the Dutch would always test people with the way they pronounced Scheveningen. For someone not Dutch it's damn impossible to say. You have to have been here a long time to pronounce it right. Obviously the Germans couldn't and this Aussie can't either. You need a mouth full of marbles to say it the way the Dutch do.

Cheers
Dave

I still think of it simply as "PCH"

http://www.coastalradio.org.uk/worldcoastal/scheveningenradio/pch.htm

I wonder if the 518kHz NAVTEX antenna is the old 500kHz one - certainly that's what EJM/Malin Head did after the closure of 500kHz and the later instigation of NAVTEX.

Hi guys,

The Dutch navtex transmissions originate from the Dutch
Coast Guard in Den Helder but are actually aired from the Scheveningen
site.

The site in Den Helder (Julianadorp to be more precise) belongs
to the navy, callsign PBB

Hello Dave,

The antenna you menstioned for NAVTEX is a wire type bi-conal vertical.
Due to the lower frequencies, 490 kHz and 518 kHz, the size is a bit
larger.

When you look more closely you will see the wires that link the guy
lines, which are part of the antenna.

73,
Roelof

Hi John,

Thanks for the info.

A few other other stations that come to mind where the station name is not the actual transmission site are:

Corsen France: the transmitter is located on the the Ile d'Ouessant.
Split: transmitter is located on the island Hvar, ~40 km south of Split

And probably many many more...

Cheers - Dirk

Hello Dave,

The signal is 40 dB above your noise floor.
This is by all means a strong signal, which will obliterate all but the strongest signals.
YaND will decode signals that are more than 6 dB above the noise floor.
So you loose quite a bit.

73,
Roelof

Hi Dave,

What you experience will very likely be exactly the same for a ship at sea a few miles off the coast of Scheveningen and heading for the Channel: it will not be able to receive messages from Niton. This could be a reason for the Dutch Agentschap Telecom to take action, and a more convincing argument than "my reception of Miami Navtex is hampered because of the carrier"

Guys,

I see from Roelof's Perseus that the signal is still there this morning.

I have had no reply from Den Helder to my email reporting the fault. I don't know if that's because they don't understand, or they don't want to investigate.

Perhaps someone else should report it also, in the correct language?

The email address listed for them is:

ccc@...

Regards,

Joh

5914. RE: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)
Date: 2013-09-03 18:10:47 UTC
From: <dirk.claessens@...>
Topic: 5348 Message: 5914

Hi all,

I'm happy with the loop... I can perfectly null out the carrier.
However, reception of Las Palmas was a surprise; it's not straight on the null of the loop but very close.
Another mystery of loop behaviour at night. Sydney was weak but just identifiable.

Regards - Dirk

5921. Carrier 518 kHz.

Yahoo group: navtexdx (2013)
Date: 2013-09-04 18:39:20 UTC
From: Roelof Bakker
Topic: 5919 Message: 5921

Hello all,

Today, I have received an answer from PA0RBC.
He states that action will betaken via the Goast Gard.
However it is unclear how and when.

I guess we have to wait once more what happens.

Best regards,
Roelof Bakker

Hi All,

The latest Weekly Notices to Mariners lists a number of changes
for the Portuguese stations, mainly in the station names rather
than the time slots. According to these entries all of the stations
are now being operated by the Portuguese Coastguard and are
'remoted' from Lisbon. The station names are shown in the screen
shots below, the most interesting change is to Monsanto, which is
now called 'Penalva' (CEBCOMAR).

73 for now, Alan.

I can still see the carrier on Roelof's Perseus at 19:08 UTC. I think it may be lower amplitude than previously, but it's difficult to be sure - Roelof, Dirk and Dave will know for sure.

Hi Alan,

Thanks for the update.
I have found the site in Google Earth; many antennas and service buildings visible;see attachment.
(StreetView was useless, too many trees and bushes obscuring the view)

On another note: it seems that the "neo" Yahoo webinterface is *not* showing attachments, I had to use mail to see your 3 attachments. This reply also was sent via mail.

Regards - Dirk

Still here this morning at its usual strong level. Considering sending a report before it disappears. lol

29c by the beach today, so the towels are probably out on the dunes already. Wouldn't expect any action today.

Cheers

Dave

From: Roelof Bakker
Topic: 5863 Message: 5936

Hello all,

Terrific static due to a nearby thunderstorm over the North Sea, prevented
all weak signal work.

Hello Hans,

This is probably from NMR, Puorto Rico.
Which is located south west!

From here the direction is 267 degrees.

73,
Roelof, pa0rdt

5944. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)

From: Roelof Bakker
Topic: 5863 Message: 5944

Hello all,

Last night the static was much less, which made all the difference.
The Kyoto Dst was above 0 and the NOAA Aurora Index was 2.

I found two impeccable decodes from VCO, Sydney, CAN NL.

Hello all,

I could log the first traces of Puerto Rico this season.
Conditions are clearly changing.

Regards - Dirk

5946. Change of cover picture...

Yahoo group: navtexdx (2013)
Date: 2013-09-08 19:59:18 UTC
From: <dirk.claessens@...>
Topic: 5946 Message: 5946

Oh boy...
It took me half a day to figure out how to change the cover picture of the group in "NEO" format. It must be exactly 820 x 250 pixels at 96 DPI. Anything else doesn't work and is discarded without any further explanation.
Thank you Yahoo for fixing what wasn't broke.

5947. Re: [navtexdx] Change of cover picture...

Yahoo group: navtexdx (2013)
Date: 2013-09-08 20:15:35 UTC
From: Roelof Bakker
Topic: 5946 Message: 5947

Hello Dirk,

Looking at the threatening cloud formations on the new picture, I guess this matches your temper after the YAHOO NEO improvements!

73,
Roelof

5948. Navtex T/A

Topic: 5948 Message: 5948

Hi list,

we drove our camper van to the North Sea shore at Nr. Lyngvig in Denmark for a short vacation and I installed my ALA100 plus PERSEUS.

Leaving SeaTTY running all night I didn't find something really interesting apart from two T/A-messages - one from Boston allmost flawless.

Hello all,

The Dutch Coastguard seem to have taken prompt action!
I am very pleased to report that the carrier has gone!

73,
Roelof Bakker

Hello,

With the carrier on 518.089 kHz now off, I can't wait to find the state of
propagation from the north.
Once more, I will rely on just my trusty mini-whip.
(I consider selling my DX-Engeneering NCC-1)

Last night conditions were interesting.
For the first time after summer a (scrambled) decode from VON, St. Johns,
CAN was found in the 22:20 UTC time slot.

Daily log:

Well done Roelof!

My email last week must have been ignored - perhaps they don't care for emails from the UK, written in English - but at last the problem is fixed.

A lot of information has been gathered - mainly by Dave - during this episode.

Great news!

John

YESSSSSS! Thanks Roelof!

But I guess they will never tell us what the cause of the problem was...
I'm curious to know.

Regards - Dirk

Hi all,

Interesting propagation. Archangelsk and Bodo are back, and nice copy of Porto Santo, Ismailia and St. John's.

Regards - Dirk

From: David Onley
Topic: 5959 Message: 5959

Horrible static the past week here with so many rolling thunderstorms.

As I type, I can't see our pest. Anyone else confirm this?

Dave

Hello Dave,

On Monday around noon, I have sent a friendly email to the Dutch Coastguard explaining the problem with the TX in Scheveningen. The same evening the Duty Officer replied, thanked for the information and stated that they would investigate the problem. Yesterday morning on 10:00 UTC, I found that the carrier was off!

So, my phasing system has been put to rest, as I no longer need it!

Dave, thank you once more for the trouble location the transmitter site. This really helped!

73,
Roelof

Hi Roelof

Its a pleasure to help and in fact quite a bit of fun to try and track it down. Team effort with all involved.

Now I have to try and put it to good use. I've almost given up dxing from home because of the noise. I must try some Cat5 instead of Coax to see if I can eliminate a few % of QRM. It was not like this from my QTH 2 years ago.

Its frustrating when you cannot do your hobby.

73
Dave

Hello all,

The winter season seems to have made a start now.
Unfortunately, static was still a problem, so lots of scrambled messages.

I found the following unit in the 23:00 UTC time slot.
It might be Puorto Rico, but I am in doubt here.

>>>

5965. RE: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)
Date: 2013-09-12 17:48:23 UTC
From: <dirk.claessens@...>
Topic: 5348 Message: 5965

Hi all,

Interesting log. I think we can safely say that the new DX season has started.
With the carrier gone, I can now freely point the loop. All stations below were received with the loop pointing NE/SW. It is the third time I received Horta in all those years of navtex DXing.

Regards - Dirk

Hello Dirk,

Just for the fun of it, I will use my loop the upcoming night pointing NE/SW.
I have seen a design that can change the pattern to just a single null instead of the figure 8 pattern with two nulls.

No time to try it out yet.

I have managed at last to communicate with my Afedri over LAN.
This is nice as now I can listen over my home network on it with a Samsung NC-10 in my workshop as well!

73,
Roelof

5969. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-13 10:01:32 UTC
From: Roelof Bakker
Topic: 5863 Message: 5969

Hello all,

Last night I put my refurbished ALA1530 into action for NAVTEX.
The direction was NE/SW, nulling out the static over Bulgaria.
I did not log any Canadian NAVTEX station, but otherwise it was not too
bad, really.
For the first time this season Svalbard was decoded and also lots of
decodes from Horta.
I will rerun my PERSEUS recording later today.
It will be interesting to find the differnces!

2013-09-13 10:32:56> LOW CENTRE ~~~~~~{}

Don't mind the time of rerception, this is the time of playback.

Except NMR, no T/A stations were found on my mini-whip recording either!

73,
Roelof

Hi Roelof,

I had my ALA100 also pointing towards 55° last night but received nothing from Svalbard here in Denmark.
Also NMR San Juan,PTR was not received. Only a couple of traces of typical North American transmissions but not identifiable.

Instead I received Murmansk, RUS and Sydney, CAN.

Interesting how different reception over here was though being in a very quiet environment.

```
Date        UTC  QRG  ID  Station        ITU

Betreff: [navtexdx] NAVTEX from Zealand, HOL

Hello all,

Last night I put my refurbished ALA1530 into action for NAVTEX.
The direction was NE/SW, nulling out the static over Bulgaria.
I did not log any Canadian NAVTEX station, but otherwise it was not too bad, really.
For the first time this season Svalbard was decoded and also lots of decodes from Horta.
I will rerun my PERSEUS recording later today.
It will be interesting to find the differnces!

Hello Joachim,

When you look at a map, you will see that my location is quite a bit more to the west than yours in Denmark.
As a consequence your path to Svalbard is for large part over Sweden and Norway.
From here the path is just over a small part of Norway.
I guess this makes all the difference.

However, I have yet to receive Murmansk!
I will try the loop for a couple of nights, just for the fun of it.
Lower in the band it receives much more local noise.
At 518 kHz it is relatively clean.

On an other note, NDB LT-305 was strong here at 01:40 UTC.
The signal is getting stronger by the day and I guess my path might be also better than yours.

73,
Roelof

5973. Start of DX Season

Between thunderstorms, the noise level has been down to exceptionally low levels. Two DX receptions to report at > 3000 km in the last few days. Copy chewed up but enough for good ID.

5977. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-14 07:56:14 UTC
From: Roelof Bakker
Topic: 5863 Message: 5977

Hello all,

There was excellent propagation from Canada, Labrador last night, but Newfoundland was not very good.
Again, I did not find a single Canadian NAVTEX on the loop, but a few lines from VON, St. Johns in the 02:20 UTC time slot.

Dirk, Horta is now coming in every night.
It seems that the directivity of the loop helps for that direction.

Daily log:

5978. 518 logs Den Haag

Yahoo group: navtexdx (2013)
Date: 2013-09-14 08:55:20 UTC
From: David Onley
Topic: 5978 Message: 5978

A long time since I did a bit of Navtex dx. The QRM was kinder than usual last night. Only reasonable logs from here were Israel, Turkey and Greece. (Its something to work on)

From: Mike Thayne
Topic: 5979 Message: 5979

Hello All,
Some of the more interesting logs for me from last night with good copy from Svalbard, Arkhangelsk and St Johns. Sydney also but much mutilation of the text.
Best regards,
Mike, g3gms

5980. RE: Navtex Log from Antwerp, BEL (>1000Km)

Yahoo group: navtexdx (2013)
Date: 2013-09-14 14:56:10 UTC
From: <dirk.claessens@...>
Topic: 5348 Message: 5980

Hello all,

An exciting night, I catched 4 messages from Muscat,OMA! Last received here back in november 2011.

Despitethe loop pointing NW/SE, Horta made it as well, although scrambled.

Also note my record shortest log *ever* of St. John's, exactly 1 line :0)

2013-09-14 02:25:21 60> EAST COAST-NORTH OF CAPE ST FRANCIS,

Regards - Dirk

5981. RE: NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-14 15:02:07 UTC
From: <dirk.claessens@...>
Topic: 5863 Message: 5981

Dirk, Horta is now coming in every night.
It seems that the directivity of the loop helps for that direction.

Hi Roelof,

I catched 1 scrambled message from Horta in the 04:50 time slot with the loop pointing NW/SE, not exactly the ideal direction, so it must have been strong. I catched some clean messages from Muscat, see my log.

Regards - Dirk

5984. Help with UNID (04G New Orleans??)

Yahoo group: navtexdx (2013)
Date: 2013-09-15 08:42:17 UTC
From: Dirk Claessens
Topic: 5984 Message: 5984

Hi all,

I catched the garbled fragment below on the loop last night.

-CCGDEIGHT refers to 04G New Orleans, but as we all know one can't be sure about the origin of USCG messages when the header is missing (messages are frequently misrouted)

-On the other hand, the time slot of 04G is 05:00, and all USCG stations royally overrun their time slot.

-The coordinates in the message refer to the Gulf of Mexico.

- I have received 04G many times in the past, but that was during the solar minimum back in 2009/2010, so it *is* possible.

Anyone at the other side of the pond got more?

Thanks - Dirk

5985. Re: [navtexdx] Help with UNID (04G New Orleans??)

Yahoo group: navtexdx (2013)
Date: 2013-09-15 09:23:10 UTC
From: Roelof Bakker
Topic: 5984 Message: 5985

Hello Dirk,

I could not find anything on my loop.
However, my mini-whip PERSEUS combination revealed 3 messages from New Orleans.
See below.

I believe the best antenna is the one that has the lowest noise floor and at my location this is the mini-whip!
New Orleans faded slowly up and down and it was amazing that though hardly visible on the PERSEUS waterfall zoom window, YaND's Autotuning never went out of lock!

Note that 08:57 UTC is 05:10 UTC and 09:09 UTC is 05:22 UTC.

Hello all,

Despite not producing anything from New Orleans, reception on the loop was
not too bad!

From: Roelof Bakker
Topic: 5534 Message: 5990

Hello Mike,

I found VCK, Sept Iles as well.

I have now installed two instances of YaND.
One will use the PERSEUS mini-whip set up, the other the Afedri and active loop.
I will also record the band 200 - 600 kHz on both radios.

This will keep me quite busy, I'm afraid.

73,
Roelof

5991. RE: Help with UNID (04G New Orleans??)

--- In navtexdx@yahoogroups.com, <roelof@ndb.demon.nl> wrote:

Hello Dirk,

I could not find anything on my loop.
However, my mini-whip PERSEUS combination revealed 3 messages from New Orleans.
See below.

I believe the best antenna is the one that has the lowest noise floor and at my location this is the mini-whip!
New Orleans faded slowly up and down and it was amazing that though hardly visible on the PERSEUS waterfall zoom window, YaND's Autotuning never went out of lock!

Note that 08:57 UTC is 05:10 UTC and 09:09 UTC is 05:22 UTC.

======

Thanks Roelof,

Wonderful conditions so early in the season!
I'll try the whip again tonight.

Regards - Dirk

Hello all,

Daily log. St. John's in the 22:20 timeslot and fragments of New Orleans... :0)

As from now I will be sending reports with a unique date/time header added instead of grouping them under the same header. I've had it with the "neo" web interface...

Regards - Dirk

From: Mike Thayne
Topic: 5534 Message: 5994

Hello Roelof,

Oh you are going to be busy! Good job it's easier and quicker to go through the Yand log to look for the DX than the NDB's, which takes a little longer.

I made the HF version of Softrock Ensemble ll, which lies gathering dust, so I have been thinking to change the filters to make it dedicated to 518khz or below and use it with my also gathering dust ALA100M loop to make some live Navtex comparisons as you are doing, which is very interesting. That is if my little EEE Notepad will take the Yand software without siezing up.

Best regards,
Mike

Subject: Re: [navtexdx] Navtex logs from Whitley Bay

Hello Mike,

I found VCK, Sept Iles as well.

I have now installed two instances of YaND.
One will use the PERSEUS mini-whip set up, the other the Afedri and active loop.
I will also record the band 200 - 600 kHz on both radios.

This will keep me quite busy, I'm afraid.

73,
Roelof

5995. Question - YaND Database

Yahoo group: navtexdx (2013)
Date: 2013-09-16 02:08:00 UTC
From: George
Topic: 5995 Message: 5995

QUESTION: How can I completely erase all log entries in my YaND database?

COMMENT: I arbitrarily date as opening with the Fall Equinox next Sunday and would like to "clean up" my logs prior to its beginning. The Database Maintenance screen allows me to remove all entries that I have logged but leaves 560 (?) entries dated from March 2013 that perhaps (?) were present when I initially downloaded YaND on 19 Mar 2013. Entries from BEL, FR, ITA, etc. that I most certainly never logged.

Are these "embedded" in the program and non-removable? Leaving the "embedded" entries in place of course, does no harm ... I am just wondering.

Thanks in advance for any help, suggestions, etc.

73, George M (N2XM)

From: Roelof Bakker
Topic: 5534 Message: 5998

Hello Mike,

YaND won't run on a netbook as the screensize does not fit.
However, you can run two instances of YaND on the same computer.
You could use your netbook for your second RX and decode on your main computer.

I am running my PERSEUS and my AFEDRI on the same computer.
Running two instances of YaND and making two 400 kHz wide overnight recordings works flawlessly!
This is an interesting set up to compare antennas and receivers.

73,
Roelof, pa0rdt

Hello all,

Last night I have been running two instances of YaND fed by respectively a
PERSEUS / mini-whip and Afedri / loop.
The results of this first test are already interesting.

Afedri / loop log > 1000 km:

20130916 0528 518 $04G NMG New Orleans,USA 7767
```

Quite a few stations that were logged on the loop were not received on the mini-whip.
It is interesting to compare a few raw logs:

VCO, Sydney,CAN as received on Afedri / loop:

2013-09-16 03:30:37> 16/09/13 03:30:31 UTC
2013-09-16 03:30:37>

The difference is striking.
However before jumping to conclusions it should be noted that the loop was
oriented NE / SW.
The null was directed SE and attenuated static from a thunderstorm near
Sicily, ITA.
For this reason the noise floor on the mini-whip was 2 S-units higher at
02:00 UTC as it was on 05:00 UTC!

So, let us now compare reception after 05:00 UTC:

New Oreleans as received on the Afedri / loop:

Maybe the Afedri is not set for optimum performance yet.
Today, I will build a 530 kHz low pass filter and see if that makes a
difference.
It might also be a good idea to swap antennas.

I am looking forward to a static free night!

Nonetheless, it is clear that both antennas are excellent performers for
receiving long haul NAVTEX stations!

73,
Roelof Bakker

Hello Roelof,

Many thanks for your always helpful advice, I will do as you suggest and see how it goes.
73,
Mike, g3gms

Hello Mike,

YaND won't run on a netbook as the screensize does not fit.
However, you can run two instances of YaND on the same computer.
You could use your netbook for your second RX and decode on your main
computer.

I am running my PERSEUS and my AFEDRI on the same computer.
Running two instances of YaND and making two 400 kHz wide overnight
recordings works flawlessly!
This is an interesting set up to compare antennas and receivers.

73,
Roelof, pa0rdt

Hi George,

Have a close look on the date Yand proposes.
By default this will be 1 year from "now", i.e. 2012.
This was done to avoid accidental deletion of all records.

Regards - Dirk

6004. YaND Log question

Yahoo group: navtexdx (2013)
Date: 2013-09-16 14:39:10 UTC
From: <stephen_qrp@...>
Topic: 6004 Message: 6004

Hello

I use YaND extensively and find it an excellent program.

When trying to identify a transmission marked as a UNID I look for all the clues I can to help in identifying the sending station.

An area I have not paid much attention to is the column marked SQ on the log screen. Columns B1 B2 I understand but SQ is a mystery, could someone kindly tell me what it is please, and is it a useful clue.

I am guessing SQ stands for SQUARE but, if so I cannot relate the number displayed to any Navarea.

I am sure it's going to be obvious when I hear the answer, but right now my brain is letting me down again !

Regards to all

Stephen

6005. Re: [navtexdx] YaND Log question

Yahoo group: navtexdx (2013)

From: Dirk Claessens
Topic: 6004 Message: 6005

Hi Stephen,

SQ stands for Signal Quality, and is the value of the SNR gauge at the end of the message, so the range is 0..100%. I agree this is confusing and will change the naming in the next release of Yand.

Note that the SNR value Yand calculates is dependant on the IF bandwidth of your receiver: it will give sensible values for IF bandwidths in the range of 400..600Hz.
Wider bandwidths will give values that are too low.

Regards - Dirk

Hello Roelof,

Very interesting comparisons you have made and the point is well taken that the loop seems to have nulled out the Static storms, which begins to make sense. I monitored live for a few hours last night when I should have been in bed and could see the static bursts breaking up otherwise good text being received on my miniwhip.
I think perhaps I should get a remote controlled rotator and use the loop to better advantage than at present.

73,
Mike

Hello all,

Last night I have been running two instances of YaND fed by respectively a
PERSEUS / mini-whip and Afedri / loop.
The results of this first test are already interesting.

2013-09-16 03:30:37>

The difference is striking.
However before jumping to conclusions it should be noted that the loop was
oriented NE / SW.
The null was directed SE and attenuated static from a thunderstorm near
Sicily, ITA.
For this reason the noise floor on the mini-whip was 2 S-units higher at
02:00 UTC as it was on 05:00 UTC!

So, let us now compare reception after 05:00 UTC:

New Oreleans as received on the Afedri / loop:

Maybe the Afedri is not set for optimum performance yet.
Today, I will build a 530 kHz low pass filter and see if that makes a
difference.
It might also be a good idea to swap antennas.

I am looking forward to a static free night!

Nonetheless, it is clear that both antennas are excellent performers for
receiving long haul NAVTEX stations!

73,
Roelof Bakker

Hello Bob,

> I don't know quite what happened last night but this was what I received
> !

The sun has been quiet lately.
The sunspot number is a low 12 at the moment and solar flux is now below
100 (93).
The Kyoto Dst has been around zero (or well above it) for more than 12
days.
This means that the ring current is low and conditions have fully
recovered for LF.

Let us hope it stays this way and we might be in for more surprises.

It is interesting to note that the ham community is talking about a second
peak in solar activity.
Reality has it that scientists are ongoing downgrading there forecasts.
Solar peak should now have been this summer.

73,
Roelof

6008. RE: Re: [navtexdx] YaND Log question

Yahoo group: navtexdx (2013)
Date: 2013-09-16 16:38:14 UTC
From: <stephen_qrp@...>
Topic: 6004 Message: 6008

Thank you Dirk, I appreciate the clarification.

If I might be so bold as to request consideration of two other items that might be possible for any future release.

I use YaND with AutoTuning off and manually set the center frequency on the Signal Spectrum window pane, these setting are lost when YaND closes. It would be great if YaND remembered the last settings used and defaulted to those setting on start up. It's just a convenience request.

The other, more difficult request, is having finally been able to put a station name to a UNID it would be really helpful to amend the log from with YaND on the log screen instead of having to use the database manager you kindly include in the installation folder. The fact it is included makes me think you have thought about this before and that programing issues make it difficult to amend the log file from with YaND, hence the standalone database manager.

Would you already have a TXT file with station identifiers. For example the other day I identified a garbled message as being from Astrakhan, in order to amend the log file I needed the 3 letter identifier UJB plus of course the country RUS. Once entered this was then plotted onto DX Atlas which gives me a visual overview of all my decodes on any given day/night..very handy. If you already have a TXT file of stations with as per my example UJB Astrakhan,RUS in it, then I could do a quick copy and paste via the database manager into the log file. I can of course create my own, but just wondering if you already have one ?

Kind regards and thanks for a great program.

Stephen

--- In navtexdx@yahoogroups.com, <navtexdx@yahoogroups.com> wrote:

Hi Stephen,

SQ stands for Signal Quality, and is the value of the SNR gauge at the end of the message, so the range is 0..100%. I agree this is confusing and will change the naming in the next release of Yand.

Note that the SNR value Yand calculates is dependant on the IF bandwidth of your receiver: it will give sensible values for IF bandwidths in the range of 400..600Hz.
Wider bandwidths will give values that are too low.

Regards - Dirk

An area I have not paid much attention to is the column marked SQ on the log screen. Columns B1 B2 I understand but SQ is a mystery, could someone kindly tell me what it is please, and is it a useful clue.

Hi all,

Again an interesting log...
Can anyone confirm the tentative logging of Boston at 04:56?

Roelof: Thanks for your interesting loop/whip comparison! I will do the same tonight with the Perseus/Lowe HF225 combination.

Regards - Dirk

Dirk, not sure if this will help as my copy of the same time was not much better. But I am purty sure it is from New Orleans.

Mark, Ku7z

Thanks Mark! The DX-season has started, it seems.

Regards - Dirk

From: George
Topic: 5995 Message: 6012

Dirk: Thanks, much appreciated. Erasure complete when changed "2012" to "2013". Will have to read the screen carefully before posting a question.
73, George M (N2XM)

Subject: Re: [navtexdx] Question - YaND Database

Hi George,

Have a close look on the date Yand proposes.
By default this will be 1 year from "now", i.e. 2012.
This was done to avoid accidental deletion of all records.

Regards - Dirk

QUESTION: How can I completely erase all log entries in my YaND database?

Dirk:

I'm using Windows 7 64-bit here with Yand 6/3. Installed in directory C:/Yand/

Although I see FREQ=1000 in the INI file, when I start Yand, it always starts in auto-tune mode. All the other INI entries are correctly read and saved, so I don't believe the problem I have is with administrative authorization.

Jack K8ZOA

Hi Jack,
You're right, there was a misunderstanding. Stephen asked to save the autotuning on/off status.
But I thought he meant the last used frequency setting. When this is not saved it is a sure sign of write access problems caused by of MS "Virtual Store".

Cheers - Dirk

Dirk - thank you for the clarification.

Would you consider adding an INI setting for auto tune ON/OFF in the
next release?

Hello all,

Static was much less last night, so there was a level play field for
comparing the mini-whip and loop.

Log over 1000 km received with the Afedri and loop antenna:

6024. RE: NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-17 18:13:51 UTC
From: <dirk.claessens@...>
Topic: 5863 Message: 6024

The difference is striking.
However before jumping to conclusions it should be noted that the loop was
oriented NE / SW.
====================

Hi Roelof,

I have done the same but got different results (most likely caused by your splendid QTH near the sea) Below is what I logged on the whip/LoweHF225 combination (>3000km). On the loop/Perseus combination(with loop pointing NE/SW.) I received absolutely NOTHING, except for Novorossiysk where some garbage was seen. This indicates that the nulls of the loop are present for DX. Even Haifa was affected, not a shred of a signal was present.

Tonight I will point the loop 290/110 to Canada/US and compare again.

Regards - Dirk

6025. Re: [navtexdx] RE: NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-17 19:44:24 UTC
From: Roelof Bakker
Topic: 5863 Message: 6025

Hello Dirk,

I am certain that the loop will perform just as good as the mini-whip in a rf quiet environment.
In my location the mini-whip picks up far less noise than the loop.
Looking at a waterfall screen covering 200 - 600 kHz, the difference is striking.
However on 518 kHz the loop is not too bad, but on your bearing of 290/110 degrees it is much worse than on NE/SW.
I have minimum noise when the loop is directed due north / south.
This is what I will try tonight.

73,
Roelof

Hi All,

My recent logs have, I suspect, been improved by the recent rain that

we have been " enjoying " after a very dry summer.

The signals from my antenna go to one end of the primary of a ferrite

transformer.The other end of this winding goes to a 1M ground rod.

To keep the conductivity good in the dry weather I thought I had done

enough watering from a can, but it may well be that the recent rain

has done a much better job ! !

Last night's log of stations over 2 Km was :-

20130917 1744 518 $03K SVK Kerkyra,GRC 2031 ...12

20130917 1829 518 $03P 4XO Haifa,ISR 3567 ...9

20130917 1935 518 $09V SUK Quseir,EGY 4053

20130917 2009 518 $19B LGP Bodo,NOR 2029 ...6

20130917 2038 518 $03D TAH Istanbul,TUR 2490 ...3

20130917 2050 518 $02F CTH Horta,AZR 2541 ...14

20130917 2133 518 $03J LZW Varna,BUL 2294 ...8

20130917 2151 518 $20L UGE Arkhangelsk,RUS 2836 ...7

20130917 2158 518 $03M 5BA Cyprus,CYP 3235 ...10

20130917 2219 518 $04O VON St.Johns,CAN 3690

20130917 2227 518 $03O 9HD Malta,MLT 2090 ...3

20130917 2249 518 $04Q VCO Sydney,CAN 4281 ...5

20130918 0039 518 $03E TAF Samsun,TUR 3036

20130918 0049 518 $03F TAL Antalya,TUR 2966 ...4

20130918 0304 518 $04R NMR San Juan,PTR 6754 ...3

20130918 0354 518 $04W OXI Nuuk,GRL 3275

20130918 0421 518 $04C VCK Sept-Iles,CAN 4476

and the previous night, virtually the same plus :-

20130917 0149 518 $03L SVL Limnos,GRC 2402 ...2

20130917 0248 518 $04N NMN Portsmouth,USA 5968 ...4

20130917 0455 518 $04F NMF Boston,USA 5238

20130917 0520 518 $02I EAL Las Palmas,CNR 2693

The number of messages from each station is included,

for those with no number read 1.

Incidently, Horta is now one of my " Locals ".

With a tall ladder and a good telescope that could see

round the curvature of the earth, tha Azores would be

" line of sight ", no land in between !

Cheers

Bob

6029. Navtex logs from Whitley Bay

Yahoo group: navtexdx (2013)
Date: 2013-09-18 14:11:32 UTC
From: Mike Thayne
Topic: 5534 Message: 6029

Hello All,

Logs +1500km from last night could have been better with addition of garbled messages from NMN, NMR and VCO but no headers or enough text for positive ID. Ah well can't win them all, just keep trying!
Regards,
Mike

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: Homemade Softrock Ensemble II with
HDSDR software.
Decoder: YaND 6_3D.
Computer: Dual CPU 2.2Ghz, RAM 2.00GB with
internal soundcard.
Antenna: PA0RDT miniwhip circuit 7m agl

Distances greater than 1500km

Topic: 6033 Message: 6033

received here in Luebbecke last night. Horta for the first time and Labrador first time since 2007. Two nice catches for me.

R&S EK071 and ALA 1530 East--West

73

Hello Hans,

This is what I received from Labrador, once Grindavik went silent!
Your UNID at 04:01 UTC is FRC, Corsen, France.

6035. New member's 518 kHz (500>Km) Navtex Log 18/19 Sept 2013

Yahoo group: navtexdx (2013)
Date: 2013-09-19 10:34:16 UTC
From: <denno9@...>
Topic: 6035 Message: 6035

Hello all,
Below is my first selective log from QTH Corby England.For a couple of nights I had tried using my amateur rig receivers (Kenwood TS940S & Icom IC-706 M2) with ham-band dipoles , but the noise level on MF is a problem. Last night tried my trusty old Sony ICF-2001D portable just with its Ferrite rod antenna (null direction approx NW/SE) and the excellent YaND, and was pleased with the result. Some antenna experimentation needed I think!

Topic: 5863 Message: 6036

Hello all,

Using just one antenna makes life much easier!
Last night my loop was directed E/W and it appears that after midnight the local noise is much less.
As the noise is related to a cable TV issue, this makes sense.

Reception on the loop was excellent:

Hi Roelof, all

Thank you for the identification of my log of 04:01. Guessed it was also Labrador. Would have expected Corsen with a clear signal.

73
Hans, Dl4YBP

6039. Re: [navtexdx] New member's 518 kHz (500>Km) Navtex Log 18/19 Sept 2013

Yahoo group: navtexdx (2013)
Date: 2013-09-19 14:58:34 UTC
From: Dirk Claessens
Topic: 6035 Message: 6039

Hello Dryden,

Welcome to the group.
Impressive result with the old Sony.
Noise is indeed the principle problem on MF; much depends on the QRM levels in your environment. The best antenna for Navtex is the pa0rdt miniwhip or a small wideband loop with preamp (ALA1530), but both must be placed outside away from in-house QRM sources. Grounding the coax before it enters the house is beneficial in most cases.

Regards - Dirk

>Hello all,
>Below is my first selective log from QTH Corby England.For a couple of nights I had tried using my amateur rig receivers (Kenwood TS940S & Icom IC-706 M2) with ham-band dipoles , but the noise level on MF is a problem. Last night tried my trusty old Sony ICF-2001D portable just with its Ferrite rod antenna (null direction approx NW/SE) and the excellent YaND, and was pleased with the result. Some antenna experimentation needed I think!

6040. Log from Antwerp, BEL 20130919

Yahoo group: navtexdx (2013)
Date: 2013-09-19 20:29:01 UTC
From: Dirk Claessens
Topic: 6040 Message: 6040

Hi all,

Nice T/A conditions!
Received on the loop pointing 290/110, using the old faithful Lowe HF225.

Regards - Dirk

6041. Logs Rotterdam 19/20 September 490/518

Yahoo group: navtexdx (2013)
Date: 2013-09-20 06:15:50 UTC
From: Vincent Schriel
Topic: 6041 Message: 6041

From last night two logs, both 490 and 518. I used Studio 1 (in CW mode) and two versions of YaND.

```

6042. Navtex logs from Whitley Bay ENG

Yahoo group: navtexdx (2013)
Date: 2013-09-20 08:38:01 UTC
From: Mike Thayne
Topic: 6042 Message: 6042

Hello, My +1500km logs from last night. An early appearance from Sydney CAN but nothing T/A later on. Otherwise a good mix.

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: Homemade Softrock Ensemble II with
HDSDR software.
Decoder: YaND 6_3D.
Computer: Dual CPU 2.2Ghz, RAM 2.00GB with
internal soundcard.
Antenna: PA0RDT miniwhip circuit 7m agl

Topic: 6035 Message: 6043

Hello Dirk, and thank you for your helpful tips. My location is rural and fairly quiet with regard to man-made QRM, but it's clear that my dipole antennas collect too much atmospheric noise, with weak signals buried beneath the noise floor. I have no experience with 'small' Hi-Q antennas, but looking forward to experimenting in the coming winter months! Thanks again

Hello Dryden,

Welcome to the group.
Impressive result with the old Sony.
Noise is indeed the principle problem on MF; much depends on the QRM levels in your environment. The best antenna for Navtex is the pa0rdt miniwhip or a small wideband loop with preamp (ALA1530), but both must be placed outside away from in-house QRM sources. Grounding the coax before it enters the house is beneficial in most cases.

Regards - Dirk

Subject: [navtexdx] New member's 518 kHz (500>Km) Navtex Log 18/19 Sept 2013

Hello all,
Below is my first selective log from QTH Corby England.For a couple of nights I had tried using my amateur rig receivers (Kenwood TS940S & Icom IC-706 M2) with ham-band dipoles , but the noise level on MF is a problem. Last night tried my trusty old Sony ICF-2001D portable just with its Ferrite rod antenna (null direction approx NW/SE) and the excellent YaND, and was pleased with the result. Some antenna experimentation needed I think!

6049. UNID's from last night

Yahoo group: navtexdx (2013)
Date: 2013-09-20 12:12:35 UTC
From: Vincent Schriel
Topic: 6049 Message: 6049

I've found 3 UNID's. Hope that someone can help me to indentify them.

Just after the Den Helder message:

Hello Vincent,

Your first UNID is Haifa, 4XO, the second is VON, St. Johns and the third is NMR, Puorto Rico!

73,
Roelof

The last one means that I receive San Juan in Rotterdam. Thank you for
the infomation.

Vincent

6052. Yand not decoding

Yahoo group: navtexdx (2013)
Date: 2013-09-20 17:57:12 UTC
From: <dxing.radio@...>
Topic: 6052 Message: 6052

Dirk,

Kan je me helpen , ik krijg allemaal UNIDS

Heb hiervoor de UNIDS gedelete, Yand kan nu de database niet meer lezen ?

waarom wordt onderstaande logs niet gecodeerd op SAA Gislovshammar

```

Topic: 6052 Message: 6053

Hallo David,

Het deleten van de UNIDs kan geen invloed hebben op de tabel met de stationsgegevens.
De eigenlijke logs zitten in een aparte tabel en dus gescheiden van de stationsgegevens

- welke versie van Yand gebruik je?
- Als je yand opstart krijg je dan een foutbericht?
- zie je een bestand YAND_DB.ABS in de yand directory?

groeten - Dirk

6054. UTT Odessa!

All,

I almost deleted the message below; it was dangling at the end of a totally mutilated message from- presumably - Alger. Header is missing but ID is &03C

Not exactly long haul DX at 1968 km, but a rare catch from my QTH. Previous logging dates back to 2009.

Regards - Dirk

6056. Navtex Report form Central New Jersey

Yahoo group: navtexdx (2013)
Date: 2013-09-21 00:26:58 UTC
From: George
Topic: 6056 Message: 6056

Report from my primary Central New Jersey QTH. Stations listed were uniquely identified by YaND and had clear beginning and ending sequences "ZCZC " and "NNNN" along with uninterrupted intelligent continuity in their text.

Additional: Aside from VAR-9 Fundy CAN (903 miles NE), was able to log beacons only from the east and south. Nothing from the northeast where, in the past, I would readily log four additional Navtex stations. While the SDR-IQ was logging the Navtex beacons, I was live-listening to NDBs on my Perseus attached to a second computer driven from the same Mini-whip antenna (via a matching-splitter unit). Seemingly the band to the NE was open since many ON and QC Canadian NDBs were heard with the Perseus.

Explanation ... (???) ... Does the Navtex/NDB difference arise because of required receiver bandwidth in use? ... Navtex = 300-400 Hz; NDB of the order of Hz. (My experience is that the SDR-IQ can match the Perseus in sensitivity if the bandwidths are identical). Or were the kilowatt NDBs muscling through while the 200 watt Navtex beacons had insufficient power for the propagation conditions at the time (???)

If the Navtex/NDB difference was not so pronounced, I would attribute the phenomena to my having used a faulty comparison technique. But then again perhaps there is something additional that I am missing ... (???) Comments, criticisms, etc. will be very gratefully received.

73, George M (N2XM)

6057. Re: [navtexdx] Navtex Report form Central New Jersey

Yahoo group: navtexdx (2013)
Date: 2013-09-21 01:29:23 UTC
From: Jack Smith
Topic: 6056 Message: 6057

All the east coast USCG NAVTEX stations are presently running 40-42 minute transmissions on their 4 hour cycle. There's not much time gap for DX to sneak through.

As a point of comparison, from my location near Washington DC, starting at 0000Z 20 Sept 2013, I've printed NAVTEX from the following 10 stations. Also have seen decent print from Alaska earlier in the week, but not on the 20th. Likewise with Greenland; printed nicely earlier in the week but nothing on the 20th.

20130920 0017 518 $04A NMA Miami,USA 1505
20130920 0041 518 $04E NME Charleston,USA 836
20130920 0051 518 $04F NMF Boston,USA 667
20130920 0106 518 $04G NMG New Orleans,USA 1522
20130920 0222 518 $04N NMN Portsmouth,USA 256
20130920 0244 518 $04Q VCO Sydney,CAN 1627
20130920 0251 518 $04R NMR San Juan,PTR 2471
20130920 0324 518 $04U VAR-9 Fundy, NB,CAN 1184
20130920 0420 518 $04B ZBM Bermuda Harbour ,BER 1350
20130920 0647 518 $12Q NMQ Cambria,USA 3855

There's clearly an SNR advantage if you listen to an NDB with 10 Hz bandwidth versus 400 or 500 Hz for NAVTEX. Noise power difference is 10 log (bandwidth ratio) so 10 log (500/10) = 17 dB. Then there's also an adjustment that should be applied for the minimum SNR you can copy the CW ident of an NDB versus the minimum SNR required for a successful NAVTEX decode.

Using a Clifton Laboratories Z1501F active antenna and a netSDR receiver with Yand 6.3. I let it run 24/7.

Jack K8ZOA

6059. Re: [navtexdx] Navtex Report form Central New Jersey

Yahoo group: navtexdx (2013)
Date: 2013-09-21 07:42:52 UTC
From: Roelof Bakker
Topic: 6056 Message: 6059

George,

NAVTEX is a different game due to the greater bandwidth.
I use a bandwidth of 400 Hz.
The signal must at least be 6 dB stronger than the band noise.

This also applies for marginal copy of a NDB.
However, for NDB reception you can go as low as a filter bandwidth of 8 Hz.
In a bandwidth of 8 Hz the received band noise is 17 dB lower.
This is a large difference.

I can often log Canadian NDB's and decode nothing from Canada on NAVTEX!

So your experience boils down to propagation!

73,
Roelof Bakker

Hi Vincent,

This is clearly 04G sending a misrouted message. Nice catch!

(message was tagged as spam again. The *same* message sent with CC: to me, Roelof, and Joachim was received normally. Incomprehensable!)

Regards - Dirk

Hi all,

Splendid conditions from all directions again.
Upernavik/Disko Island is a new one for me!

Regards - Dirk

Hi all,

I left my radio on 490 kHz for three nights and this is the log. VCO Sydney
was a surprise.

6064. Navtex logs from Whitley Bay ENG

Yahoo group: navtexdx (2013)
Date: 2013-09-21 09:40:40 UTC
From: Mike Thayne
Topic: 6042 Message: 6064

Hello All,
A good night with DX from all directions.
Dirk I think my message about the Pacific is the same as yours but my header points to Miami, although Yand gives it UNID.

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: Homemade Softrock Ensemble II with
HDSDR software.
Decoder: YaND 6_3D.
Computer: Dual CPU 2.2Ghz, RAM 2.00GB with
internal soundcard.
Antenna: PA0RDT miniwhip circuit 7m agl

6065. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-21 09:53:07 UTC
From: Roelof Bakker
Topic: 5863 Message: 6065

Hello all,

There was no static over all of Europe, plus good propagation and that shows on the log!

Regarding the loop, it appears that with good conditions many more stations "off beam" are received.
The loop is directed due E/W, nevertheless I found Archangelsk and Bodo!
It seems that the nulls are quite small.

An other point is that only a signal to noise ratio of > 6 dB will produce a solid decode.
Bodo was received at 20:19 UTC on the loop and at the same time the signal was 20 dB over the band noise on the mini-whip. As both antennas are adjusted for the same output, this gives 14 dB leeway for the loop.

Uppernarvik/Disko Island was received with a good decode:

Afedri / loop:

Dirk, sorry my memory was confused when I refererred to you about the Pacific. Mixed messages in mixed brain! I was thinking of message from Vincent.
Regards,
Mike

Subject: [navtexdx] Navtex logs from Whitley Bay ENG

Hello All,
A good night with DX from all directions.
Dirk I think my message about the Pacific is the same as yours but my header points to Miami, although Yand gives it UNID.

Mike Thayne, g3gms

From: dxing.radio
Topic: 6052 Message: 6068

Dirk,

After restarting laptop now everything is OK again.
Use Yand 6.3.
Sometimes do have more problems (including crashes) when I quickly switches between log-database- report, etc

Probably a memory problem of Windows 7 .. grrr

Thanks for the effort.

David

Onderwerp: [navtexdx] RE: Yand not decoding

Hallo David,

Het deleten van de UNIDs kan geen invloed hebben op de tabel met de stationsgegevens.
De eigenlijke logs zitten in een aparte tabel en dus gescheiden van de stationsgegevens

- welke versie van Yand gebruik je?
- Als je yand opstart krijg je dan een foutbericht?
- zie je een bestand YAND_DB.ABS in de yand directory?

groeten - Dirk

Hi Roelof,

I'm experiencing exactly the same here with Bodo/Arkhangelsk.
Your explanation perfectly makes sense.

Regards - Dirk

Regarding the loop, it appears that with good conditions many more
>stations "off beam" are received.
>The loop is directed due E/W, nevertheless I found Archangelsk and Bodo!

Thanks to all who replied to my request for comments re: "missing" Canadian Navtex beacons.

Roelof: I accept that propagation was a factor in my not logging the "missing" beacons. Such was implicit in my remark about the difference in bandwidth requirements to receive Navtex and NDB transmissions. But could there be an additional confounding factor? (See next.)

Jack: your remark that "... All the east coast USCG NAVTEX stations are presently running 40-42 minute transmissions on their 4 hour cycle" is a possible factor that I had not considered. Could the closer verbose stations be "covering up ... breaking up ... "overrunning" transmissions (how to describe ???) from the more distant "missing" stations. The four "missing" Canadian Navtex stations that I usually receive with regularity are: VCK Sept-Ilies (1293 miles, slot "C"), XMT329 Prescott (769 miles, slot"H"), VON St Johns NB (847 miles, slot "O") and VCO Sydney (847 miles, slot "Q").

To check this hypothesis I reviewed the raw logs and found that NMN Portsmouth ran 47 minutes (first transmission) and 41 minutes (second transmission that evening). Being much closer and of much higher radiated power, NMN (260 miles, slot "N") might have "overrun" St Johns (slot "O") and perhaps the initial part (containing the iden) of Sydney (slot "Q"). Likewise ZBM Bermuda (1232 miles, slot "B") ran 39 minutes and could have "overrun" the iden of Sept-Ilies (slot "C"). Further, both the Portsmouth and the Bermuda transmissions were followed by considerable unidentified text which, with GREAT ... repeat GREAT... imagination, could be attribute to the "missing" beacons. Which would leave only the "absence" of Prescott unexplained ... a "pure propagation" effect (???).

Of course, I concede that the preceding concerning "overrunning" beacons is speculation ... but then again pondering speculations often leads to understanding. And being relatively new to Navtex logging, I am still learning ... albeit slowly.

73, George M (N2XM)

Subject: Re: [navtexdx] Navtex Report form Central New Jersey

All the east coast USCG NAVTEX stations are presently running 40-42 minute transmissions on their 4 hour cycle. There's not much time gap for DX to sneak through.

As a point of comparison, from my location near Washington DC, starting at 0000Z 20 Sept 2013, I've printed NAVTEX from the following 10 stations. Also have seen decent print from Alaska earlier in the week, but not on the 20th. Likewise with Greenland; printed nicely earlier in the week but nothing on the 20th.

20130920 0017 518 $04A NMA Miami,USA 1505
20130920 0041 518 $04E NME Charleston,USA 836
20130920 0051 518 $04F NMF Boston,USA 667
20130920 0106 518 $04G NMG New Orleans,USA 1522
20130920 0222 518 $04N NMN Portsmouth,USA 256
20130920 0244 518 $04Q VCO Sydney,CAN 1627
20130920 0251 518 $04R NMR San Juan,PTR 2471
20130920 0324 518 $04U VAR-9 Fundy, NB,CAN 1184
20130920 0420 518 $04B ZBM Bermuda Harbour ,BER 1350
20130920 0647 518 $12Q NMQ Cambria,USA 3855

There's clearly an SNR advantage if you listen to an NDB with 10 Hz bandwidth versus 400 or 500 Hz for NAVTEX. Noise power difference is 10 log (bandwidth ratio) so 10 log (500/10) = 17 dB. Then there's also an adjustment that should be applied for the minimum SNR you can copy the CW ident of an NDB versus the minimum SNR required for a successful NAVTEX decode.

Using a Clifton Laboratories Z1501F active antenna and a netSDR receiver with Yand 6.3. I let it run 24/7.

Jack K8ZOA

On 9/20/2013 8:26 PM, George wrote:

Report from my primary Central New Jersey QTH. Stations listed were uniquely identified by YaND and had clear beginning and ending sequences "ZCZC " and "NNNN" along with uninterrupted intelligent continuity in their text.

Additional: Aside from VAR-9 Fundy CAN (903 miles NE), was able to log beacons only from the east and south. Nothing from the northeast where, in the past, I would readily log four additional Navtex stations. While the SDR-IQ was logging the Navtex beacons, I was live-listening to NDBs on my Perseus attached to a second computer driven from the same Mini-whip antenna (via a matching-splitter unit). Seemingly the band to the NE was open since many ON and QC Canadian NDBs were heard with the Perseus.

Explanation ... (???) ... Does the Navtex/NDB difference arise because of required receiver bandwidth in use? ... Navtex = 300-400 Hz; NDB of the order of Hz. (My experience is that the SDR-IQ can match the Perseus in sensitivity if the bandwidths are identical). Or were the kilowatt NDBs muscling through while the 200 watt Navtex beacons had insufficient power for the propagation conditions at the time (???)

If the Navtex/NDB difference was not so pronounced, I would attribute the phenomena to my having used a faulty comparison technique. But then again perhaps there is something additional that I am missing ... (???) Comments, criticisms, etc. will be very gratefully received.

From: Roelof Bakker
Topic: 5863 Message: 6077

Hello all,

I have received information that the location of the Dutch NAVTEX service will be changed at the end of the year from Scheveningen / The Hague to the Dutch Navy site on Goeree. All antennas at Scheveningen will be dismantled and the premises will be sold.
The Military have acquired the short wave station in Flevoland and in due course the facility at Goeree will be closed as well. So the move to Goeree will be temporary, though it is not yet known for how long.

This means that the Ducth Navtex service will move almost into my back yard.
However it is not as bad as it looks. The current location is 80 km as the crow flies and Goeree is 40 km.
This means a signal strength increase of only 6 dB.

On an other note, last night propagation has been excellent once more.
I am rather surprised at the results on the loop.
The noise floor is 2 dB worse than on the mini-whip, however the directivity seems to compensate this.

Afedri / loop:

From: Jack Smith
Topic: 6056 Message: 6079

If two NAVTEX stations are simultaneously received, if one station is significantly stronger than the other, the strongest station will be printed. (I have not measured the signal level difference required for one station to capture the print, but as a rough estimate, 6 dB. Dirk can provide a real number for Yand, I'm sure.)

If the signal level of stations A and B are such that neither is all that much stronger than the other, the result will be a random jumble of characters.

What usually happens, of course, is that skywave signals fade up and down so that over the course of minutes or even tens of seconds, the relative signal levels of the two stations can change so the result may be bursts of good text from one station, then garble, then good text from the other station.

So the point from this is that if one station starts at time 0000 and runs for 40 minutes, stations starting their cycles at 0010, 0020 and 0030 will only be printed if they are strong enough to capture the decoder.

Yand has some diagnostic features that may help you see this effect. Click on Signal/Calibration tab and then the Scope tab. Select FIL (filter output) and you will see the reconstructed output of the mark/space channel filters. If you do this at a time when there's only one strong station transmitting, you can see how a no-interference decode looks. The mark and space signals are in different colors and when they overlap the color is yellow. In the ideal one-station situation, there is minimal overlap between the mark and space signals. Then look at the same display when multiple signals are present - you will see more overlap. The decoding algorithm - at some point - can't effectively distinguish the desired mark/space signals from the interfering mark/space signals and the print will garble.

6080. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-22 10:32:06 UTC
From: Roelof Bakker
Topic: 5863 Message: 6080

Hello all,

Further to the reception on the loop versus the mini-whip, I have just rerun a message starting on 04:10 UTC to confirm that it is indeed from Miami. The message contains no station information and I have seen fragments of it at other times.

This is what I received on the loop at the time:

20130922 0411 518 $04A NMA Miami,USA 7424
2013-09-22 04:11:28> ZCZC AG05

The message starts fine, but is corrupted by Alger that fires up in its
correct time slot.
After a while Alger stops and Miami is received once more.
The direction of Alger is more or less in the null of the loop.

As Jack already mentioned, this also shows that Miami is transmitting way
out of its 10 minute time slot.

6081. Re: [navtexdx] Navtex Report form Central New Jersey

Yahoo group: navtexdx (2013)
Date: 2013-09-22 10:34:41 UTC
From: Jack Smith
Topic: 6056 Message: 6081

I should add that a directional antenna can sometimes be used to reduce the strength of a particular station thereby aiding reception of a second that is simultaneously transmitting. Probably the most commonly used at NAVTEX frequencies is a loop. However, a loop null is not as effective on skywave signals as it is on ground wave signals, so you will have better results if the loop is used to cancel a nearby station than one 1000 km distant.

6082. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-22 10:39:11 UTC
From: Jack Smith
Topic: 70 Message: 6082

Here's how the 0411Z transmission from Miami printed here near Washington DC. You have printed it well with the loop - in fact better than here.

This message has been sent from all the US stations I print for the last week or more.

Jack K8ZOA

Date: 2013-09-22 15:35:49 UTC
From: Dirk Claessens
Topic: 6056 Message: 6084
Attachments: 1 described; binary payloads are missing from this source WARC

Hello Jack,

Your analysis is absolutely correct. There is no way a navtex decoder can deal with 2 stations interfering with each other. Another sure sign of interference is when you see strong amplitude modulation of the raw signal on Yand's scope . I have attached a screenshot of Torshavn interfering with a Spanish station. Up to 100% modulation, which is caused by the relative phase of the signals causing addition or subtraction. Note however that for weaker signals the modulation may not be so apparent.

I cannot give an exact figure for how much signal A must be stronger than B to cause problems. For noise, the signal must be >~6 dBm over noise for SeaTTY/Yand to acquire sync and start decoding, albeit with much errors. An underlying navtex signal is a totally different ball game.

Regards - Dirk

>_____
>. If you do this at a time when there's only one strong station transmitting, you can see how a no-interference decode looks. The mark and space signals are in different colors and when they overlap the color is yellow. In the ideal one-station situation, there is minimal overlap between the mark and space signals. Then look at the same display when multiple signals are present - you will see more overlap. The decoding algorithm - at some point - can't effectively distinguish the desired mark/space signals from the interfering mark/space signals and the print will garble.

6085. Navtex Nova Scotia

Yahoo group: navtexdx (2013)
Date: 2013-09-22 19:03:05 UTC
From: Vernon
Topic: 6085 Message: 6085

TA conditions continue to improve but always hampered by the big East Coast NA guns that transmit continuously :-)

Anyway we try to listen when they are asleep on the schedule. La Maddalena Radio was a nice surprise @ 5703km...first for this year.

Cheers...

Vernon

Hi Vernon,

Nice catch, but I'm not surprised you logged La Maddalena. At ~1100 km from my QTH, I can regularly receive it in daytime on a path 90% over land. It seems they want to be heared all over Europe, not just the
Mediterranean :0)

Regards - Dirk

Hi all,

Again interesting propagation from all sides.
Received on the Loop + Perseus.

Anyone got more of the UNID? Time slot is 04H Prescott but I'm unsure. Only hint is Cape St. Francis.

Regards - Dirk

6091. AW: [navtexdx] Navtex log from Antwerp, BEL 20130922

Yahoo group: navtexdx (2013)
Date: 2013-09-23 04:18:09 UTC
From: Joachim Rabe
Topic: 6088 Message: 6091

Hi Dirk,

as Roelof already stated - at least the first line of your log could be from Curacao since we both logged it also at exactly the same time. BUT there's a rather big time gap between line 1 and line 2 of your log:

2013-09-22 05:12:47> ZCZC HA~~E
2013-09-22 05:34:13> ~~~SUND~Y 22~ [SEPTEMBER] 2~1~ FOR~TTDAY

YAND made this one single log and it might indeed have been Curacao and Prescott that got mixed. Difficult to ascertain.

73s

Joachim Rabe

Von: navtexdx@yahoogroups.com [mailto:navtexdx@yahoogroups.com] Im Auftrag von Dirk Claessens
Gesendet: Sonntag, 22. September 2013 22:21
An: NAVTEXDX
Betreff: [navtexdx] Navtex log from Antwerp, BEL 20130922

Hi all,

Again interesting propagation from all sides.
Received on the Loop + Perseus.

Anyone got more of the UNID? Time slot is 04H Prescott but I'm unsure. Only hint is Cape St. Francis.

Regards - Dirk

Report from : Dirk Claessens

6092. AW: [navtexdx] Navtex log from Antwerp, BEL 20130922

Yahoo group: navtexdx (2013)
Date: 2013-09-23 04:20:26 UTC
From: Joachim Rabe
Topic: 6088 Message: 6092

Sorry,

I didn't read Jack's answer to this case before I wrote.
Please forget this one.

Betreff: AW: [navtexdx] Navtex log from Antwerp, BEL 20130922

Hi Dirk,

as Roelof already stated - at least the first line of your log could be from Curacao since we both logged it also at exactly the same time. BUT there's a rather big time gap between line 1 and line 2 of your log:

2013-09-22 05:12:47> ZCZC HA~~E
2013-09-22 05:34:13> ~~~SUND~Y 22~ [SEPTEMBER] 2~1~ FOR~TTDAY

YAND made this one single log and it might indeed have been Curacao and Prescott that got mixed. Difficult to ascertain.

Hi all,

Again interesting propagation from all sides.
Received on the Loop + Perseus.

Anyone got more of the UNID? Time slot is 04H Prescott but I'm unsure. Only hint is Cape St. Francis.

Regards - Dirk

Indeed Joachim, and Bjuroklubb and Irakleion are in the same time slot as well. It's likely a mix-up of signals.

6095. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-23 09:18:19 UTC
From: Roelof Bakker
Topic: 5863 Message: 6095

Hello all,

The refurbished ALA1530 does amazingly well.
Last night it produced exceptional reception from Miami and New Orleans,
but also from Bodo and Vardo!
However, not a trace from Puorto Rico!

Overall the quality of the decodes on the loop are better than on the
mini-whip. However the question is which antenna brings in more DX
stations. Last night the loop received Uppernarvik, GRL, where the
mini-whip found Las Palmas at the same time. The mini-whip found Svalbard
and the loop did not, which is no surprise given the E/W direction of the
loop. However, the loop did receive northern stations Bodo, Vardo and
Archangelsk.
I believe it is too early to decide which antenna is best, if that is
possible after all.
I will continue this test over the winter, but from now on I will submit a
combined log of stations received.

It should be nice if I could get hold of an other defunct ALA1530 and use
it directed N/S.

Miami on the loop:

6096. Exceptional Opening to Alaska

Yahoo group: navtexdx (2013)
Date: 2013-09-23 09:53:23 UTC
From: Jack Smith
Topic: 6096 Message: 6096

Exceptionally good signals from Alaska to the east coast of the USA
overnight. Both 12J and 12X. Sample message below.

Also - no signs of Puerto Rico overnight here either.

Jack K8ZOA

Topic: 5863 Message: 6097

Great log, Roelof.

Hans, DL4YBP

--- In navtexdx@yahoogroups.com, <navtexdx@yahoogroups.com> wrote:

Hello all,

The refurbished ALA1530 does amazingly well.
Last night it produced exceptional reception from Miami and New Orleans,
but also from Bodo and Vardo!
However, not a trace from Puorto Rico!

Overall the quality of the decodes on the loop are better than on the
mini-whip. However the question is which antenna brings in more DX
stations. Last night the loop received Uppernarvik, GRL, where the
mini-whip found Las Palmas at the same time. The mini-whip found Svalbard
and the loop did not, which is no surprise given the E/W direction of the
loop. However, the loop did receive northern stations Bodo, Vardo and
Archangelsk.
I believe it is too early to decide which antenna is best, if that is
possible after all.
I will continue this test over the winter, but from now on I will submit a
combined log of stations received.

It should be nice if I could get hold of an other defunct ALA1530 and use
it directed N/S.

Miami on the loop:

Hello Hans,

Your first UNID is indeed Astrakhan:

I can't help you with the second UNID as I received Antalya at that time.

Nothing either at 02:38 UTC, but I am quite certain that this VCO,
Seydney, CAN.

Unid number four is certainly Boston; see below.

73,
Roelof, pa0rdt

I can't help you with the second UNID as I received Antalya at that time.

Nothing either at 02:38 UTC, but I am quite certain that this VCO,
Seydney, CAN.

Unid number four is certainly Boston; see below.

6102. Logs REU T/A

Yahoo group: navtexdx (2013)
Date: 2013-09-23 18:40:12 UTC
From: Joachim Rabe
Topic: 6102 Message: 6102

Hi list,

While having coffee this morning I saw SeaTTY decoding some text in the
typical North American style.
Having a closer look at the log this evening I realised, it was Bermuda
Radio which has been logged only 4 times here.

Date UTC QRG ID Station ITU

From: Dirk Claessens
Topic: 5863 Message: 6103

Hi Roelof,

Great results!
I have already made up my mind: to me, a loop with a balanced amplifier/feedline is equal to a whip with deep nulls. You just must decide on what you want, or use both in parallel to catch all there is to catch.

Regards - Dirk

6106. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-24 07:44:59 UTC
From: Roelof Bakker
Topic: 5863 Message: 6106

Hello Dirk,

There is more to it than plain reception results.
NAVTEX reception will benefit from an directional antenna due to co-channel interference.
As far as I know it is impossible to get rid of this otherwise.

NDB hunting is a quite different game.
Co-channel interference is hardly a problem as most NDB's are on 24/7.
So with a bit of patience one can wait till one station fades out and the wanted one fades up.
Moreover, the PERSEUS software a very powerful tool to separate stations just a few Hz apart.
The frequency accuracy specifications for NDB's are quite relaxed and it is rather the rule than the exception that they are not accurate to the Hz.

So for NDB hunting a non directional antenna can be advantageous and has proved here so.
My mini-whip has been also highly successful for NAVTEX reception with reception from the Far East in the past.

I may be wrong, but my impression is that 518 kHz is much more busy than in the past, which stresses the need for a directive antenna.

Yesterday evening I saw a nice example.
Just before 22:00 UTC I saw a weak station on the mini-whip, probably Hong Kong.
At 22:00 UTC the loop produced an impeccable decode from Simiutaq, GRL.
However, on the mini-whip there was still a weak station, which corrupted copy of Simiutaq, but a single word!

Loop:

Topic: 5863 Message: 6109

Hi All,

For a week or so there has been a curious interference on the 518 signals.

The waveform seems to show peaks at 100Hz intervals with a smaller peak

midway between, at 50Hz. intervals.

For some reason this seems to tail off at the higher audio frequencies, so

I moved up so that the centre frequency of the Navtex signal is now at 1750KHz

and went over to the LSB (inverted) mode.

This seems to have made quite an inprovement and I have been getting good

decodes from New Orleans, Bermuda and Curacao.

This was from the night before last;

6111. Navtex log from Antwerp, BEL 20130924

Yahoo group: navtexdx (2013)
Date: 2013-09-24 15:10:39 UTC
From: Dirk Claessens
Topic: 6111 Message: 6111

Hello all,

Again an interesting night. I logged Oman again, and Vardo in 2 time slots.

My reception statistics for Oman are:

2009: 5
2010: 6
2011: 2
2012: 1
2013: 5 (Jan-Sep)

Are we indeed heading for the next solar minimum, or is this a statistical fluke?
Hard to tell of course , based on one station. But I find the number of long haul DX reports of the last weeks telling. This is years ago.

Regards - Dirk

```
Report from    : Dirk Claessens
QTH            : South of Antwerp, Belgium
Locators       : 51.07.23N 04.28.03E [JO21je]
Receiver       : Perseus SDR, Lowe HF225
Antenna1       : paOrdt Mini-Whip @ 5m
Antenna2       : lz1aq/paordt 1mtr wideband loop
Navtex-Decoder : YaND 6.3

6112. Att: Vincent Leclerc & Hans DL4YNP

Yahoo group: navtexdx (2013)
Date: 2013-09-24 15:24:46 UTC
From: Dirk Claessens
Topic: 6112 Message: 6112

Hi guys,

Vincent is not the only one anymore to be thrown in the spam moderation bin.
Today I had to moderate a message from Hans that was wrongly tagged as spam.

There is nothing I can do but frequently check the group and let the messages through.
I have mailed Yahoo about the problems, but it seems my mails disappear into a big black hole at the other end...

Cheers - Dirk

This is CENCOMARAÇORES/CTR from São Miguel. Delete Horta as Horta Radionaval station (CTH) has been closed past January (RTP video in Portuguese: http://videos.sapo.pt/V2edbgG8Z9jkA4NouPBz). In mainland Portugal the navtex station has been moved from MONSANTO RADIO/CTV to CENCOMAR Penalva site (CENCOMAR own call sign: CTA) so you can delete "MONSANTO RADIO/CTV" references. You can still see "MONSANTORADIO" wrote in some messages wrote by the Portuguese weather service (INSTITUTO PORTUGUES DO MAR E DA ATMOSFERA). No changes at Madeira except Navtex from Porto Santo Radio/CTQ identifies as CENCOMARMADEIRA. CENCOMAR is "CENTRO DE COMMUNICAÇÕES, DE DADOS E DE CIFRA DA MARINHA".

6115. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-09-25 10:33:41 UTC
From: Roelof Bakker
Topic: 5863 Message: 6115

Hello all,

The Kyoto Dst dipped a little overnight and the NOAA Aurora Index showed
some wild excursions ysterday.
It dropped to 2 at noon, but yesterday at sunset it was 9.
This morning it was 5 and at the moment it has risen to 8.

Nonetheless, propagation is holding up quite well:

6116. Cyprus Turkish Radio again here in Luebbecke after a long time

Yahoo group: navtexdx (2013)
Date: 2013-09-25 12:25:58 UTC
From: <dl4ybp@...>
Topic: 6116 Message: 6116

Hi all,

I played a bit with TrueTTY last night. Here is a tiny selection of what I got: Cyprus Turkish radio, Haifa, Astrakhan, Puerto Rico. I am still hoping to receive Madeira and Bermuda for the first time.
(Sad to read that my message was labelled SPAM)

73
Hans, DL4YBP
R&S EK070 + ALA1530 West--East + TrueTTY (and a 7 year old notebook)

From: Roelof Bakker
Topic: 5863 Message: 6120

Hello all,

Dirk, I don't know what is going on either, but propagation is much better
than last year.
If I remember correct, reception of New Orleans was nill.
Just this month the counter for NMG is aleady at 11.

Last night the Aurora INdex was 2, later 1.
This did not reflect in NDB reception from Canada, as signals were weak.
I guess the effect of the small event of September 24, has not fully
recovered.

Hello all,

Dirk, I don't know what is going on either, but propagation is much better
than last year.
If I remember correct, reception of New Orleans was nill.
Just this month the counter for NMG is aleady at 11.

==========

Hi Roelof,

I have 62 loggings of New Orleans in my logs, one from Sep 2013, all others 2009..2011, during the last solar minimum. And last night I got a perfect decode from Baku, a first for me! See my daily log.

Regards - Dirk

Hello all,

Very decent conditions, and a new one for me: Baku, Azerbeidjan!
I will shortly provide an update for Yand's station database for Baku, the relocation of Horta => Sao Miguel, and a few other keyword additions.

6123. Slightly Off Topic

Yahoo group: navtexdx (2013)
Date: 2013-09-26 16:08:51 UTC
From: <stephen_qrp@...>
Topic: 6123 Message: 6123

Hello

This post is slightly off topic but looking for advice please.

One of the two receivers I use for NAVTEX has failed and needs to be sent back for repair.

As I have two antennas (one for each receiver) I am thinking of combining the output from each. I have a Mini Circuits combiner ZSC-4-1 as shown here
http://217.34.103.131/MCLStore/ModelInfoDisplay?13802078012020.7676086232823965

I think this should work, unless anyone has a better suggestion.

On another subject I seen reference to the Wellbrook ALA1530S + Imperium antenna. What is Imperium and why is it " better " than a standard 1530S ?

Thanks to all

Regards Stephen

Hello Stephen,

Consider that a four port splitter has 6 dB loss.
I am using a 2 port splitter to connect two receivers to one antenna.
The loss of a two port splitter is 3 dB.

I have a few spare of both type.
If you are able to mount them in a diecast box, I can sent you either one
for free.

I have the MCL-PSC-4-5-2 and the MCL-MSC-2-1W.
A 2 port splitter build with the latter has measured bandwidth od 30 kHz
to 200 MHz @ 3dB.

Best regards,
Roelof Bakker

Hello Roelof

Thank you for your very kind offer, I am hoping that the receiver that failed will not be away for more then 2 weeks so I will either use just one antenna or try the four port splitter
and see the result. I might even try combining the output from the two antennas just using a
simple nasty BNC joiner.

Why could the receiver not have failed during the Summer.....c'est la vie

Kind regards

Stephen

Hi Stephen,

As I understand it, you're planning to plug 2 antennas to two "output"
ports of the 4-port ZSC-4-1 splitter, and feeding the combined "input"
port to a single receiver. Is this correct?

The problem here, apart from the loss, is the interaction between 2
separate antenna feeds with phase differences dependant on feeder
lengths, frequency, splitter phase response, physical antenna location
(w.r.t. the incident wave direction) etc. You will find that some
signals will be enhanced (although also attenuated by the insertion loss
of the splitter) and others will be nulled due to the phase differences
between the 2 signals from the antennas.

Can you give a bit more info about why you're thinking of combining 2
antennas with a splitter?

Cheers,

John

Topic: 6123 Message: 6128

Hello John

The only reason I am combining the two antennas is that one of the receivers that I use for NAVTEX went back for repair yesterday. As I now have two antennas at 90 degrees to each other and only one suitable receiver I thought I would combine just for fun.

I am not trying anything clever like diversity reception.

Why am I using the ZSC-4-1 splitter, it's the only bit of kit I have that might be better than using
a double BNC joiner.

Roelof very kindly offered something more suitable, but for a couple of weeks I can manage with only one antenna if combining does not work.

Regards

Stephen

Hi all

Did anybody get a clearer copy of this around 2206. Seemed to be getting a bit of Muscat and I think Cyprus from 2200

6138. No logs

Yahoo group: navtexdx (2013)
Date: 2013-09-30 08:29:37 UTC
From: Vincent Schriel
Topic: 3548 Message: 6138

One of my neighbors has a power in use that interferes with my radio. Given his response to a question about this, I'm afraid this will not be solved. The neighbor wants me to remove my ALA1530 from the backyard, because his view is obstructed. So, no logs form Rotterdam until the supply is broken.

Hello Dave,

Nothing here but Cyprus at the time you mentioned!

On an other note, have you seen my mail about Den Helder moving from your back yard to Goeree by the end of this year?

73,
Roelof

They already tested the transmitter on Goeree. Last week I had a very
hard signal (s9+30db) here in Rotterdam on 518. There was no message
broadcast at that time, they only switch on the transmitter and a few
minutes later they switch it off. The signal was much harder then what I
receive now from Scheveningen.

Vincent

6141. Muscat, Ismailia, NOVOROSSIYSK, Puerto Rico received here in Luebbecke last night.

Hi Dirk

Great. Thanks for the comparison. It's always been an oddity that in years gone by I get Muscat a handful of times in the year but struggle to get Egypt as you guys do on a regular basis. The Greeks, Turks and Haifa are all regulars here, but it has to be above average for Egypt to make it through.

So to have Muscat (Be it pieces) is a good sign for me here after a couple of dreadful years at my QTH.

I'm still battling the noise but it seems to disappear about 11pm when people go to bed. It's almost smack bang on 518 khz.. So it's a compromise.

73

Dave

Hi all

Did anybody get a clearer copy of this around 2206. Seemed to be getting a bit of Muscat and I think Cyprus from 2200

From: David Onley
Topic: 3548 Message: 6143

Not great Vincent. I sympathize with you. I have a 100 neighbor's looking at my ALA 1530 around here and I'm sure they all think the same. But nobody says anything.

I'm close to putting my antennas on top of our apartment out of sight. I still fear lightning strikes and being liable for the rest of the apartments if something happens. Mind you the building has lightning rods. So it's a matter of doing it right and I'm no expert on such matters. I'm struggling to find the old chimney clamps that were used to hold TV antennas up. They don't exist here anymore.

So yeah. Technically is he within his rights to complain? Call his bluff until you get an official letter.

Regards
Dave

Subject: [navtexdx] No logs

One of my neighbors has a power in use that interferes with my radio. Given his response to a question about this, I'm afraid this will not be solved. The neighbor wants me to remove my ALA1530 from the backyard, because his view is obstructed. So, no logs form Rotterdam until the supply is broken.

Hi Roelof

No I missed that email. That is certainly reasonably good news for me, but horrible news for you.

Well to be honest I doubt it's going to make much difference for any of us in the Benelux when the transmitter fires up on the coast in that time slot.

At least you will be closer to investigate any of the little problems that arise.

Hello Dave,

Nothing here but Cyprus at the time you mentioned!

On an other note, have you seen my mail about Den Helder moving from your back yard to Goeree by the end of this year?

73,
Roelof

Hello Dave,

The Goeree location is only temporarily as the rental of the plot is running out and won't be renewed.
The military have bought the Radio Netherlands World Service transmitter site in Flevoland as it is no longer used for shortwave BCB. Maybe they will move the NAVTEX station there as well.

The signal strength wont be much more in Goeree.
At present it is only -50 dBm, a level which the PERESEUS can easily handle.
Oostende is even stronger with -46 dBm.

The BBC MW World Service at Orford Ness, 190 km as the crow flies on 648 kHz and 1296 kHz, both produced a signal level of -20 dBm!

73,
Roelof

Hello all,

Another static ridden night.
The problem is slowly moving East and it looks a bit better for the
upcoming night!

Daily log:

6149. Configuring Perseus SDR and Yand software under W7

Yahoo group: navtexdx (2013)
Date: 2013-09-30 21:41:29 UTC
From: <marc652013@...>
Topic: 6149 Message: 6149

Hi there,

After a Laptop crash (HD Renewed) I'm reinstalling all my software again.
I've a problem with Yand which cannot communicate anymore with Perseus SDR.
Audiostream. My OS is W7.

Perseus SDR is working well.. but when I startup Yand I see the following message occure:
CANNOT OPEN AUDIO DEVICE SEE SYSTEMLOG FOR DETAILS ..

Here my systemlog:

```
20:08:02 SYS: startup...
20:08:02 SYS: OS version: 6.1 build 7601, Windows 7/Server 2008 R2
20:08:02 SYS: CPU's detected: 4
20:08:03 SYS: opening database...
20:08:03 DATABASE: Log table succesfully opened, 560 records
20:08:03 DATABASE: Station table succesfully opened, 197 records
20:08:03 SYS: directory path= C:\Program Files (x86)\YaND\YaND.ini
20:08:04 MODEM: FCenter/Shift set to: 1753/170
20:08:04 AUDIO: using device "Microsoft-geluidstoewijzing"
20:08:04 AUDIO: settings: PCM, 11025Hz, 16bit, 1024 samples/block
20:08:04 AUDIO: WaveIn format query: format not supported
error code=00000002
Er is een apparaat-id gebruikt die buiten het bereik van het systeem valt.
```

Can anyone tell me what's maybe wrong in my configuration.?

I altered the angle of the loop tonight and was happy to get Las Palmas for the first time in a while but very little else. I had lines from San Juan at 0239 and possibly Arkhangelsk at 0208 - Has anybody else got similar at this time (See below)

6151. Morning eyes - Correction to 0208 log

Yahoo group: navtexdx (2013)
Date: 2013-10-01 06:57:45 UTC
From: David Onley
Topic: 6151 Message: 6151

Not enough coffee yet. I just realized looking at the 0208 log that its likely to be Cyprus not the rus = Russia that I first saw..

73

Dave

From: David Onley [mailto:ozclog@...]

Subject: Logs - The Hague

I altered the angle of the loop tonight and was happy to get Las Palmas for the first time in a while but very little else. I had lines from San Juan at 0239 and possibly Arkhangelsk at 0208 - Has anybody else got similar at this time (See below)

6152. Re: [navtexdx] Configuring Perseus SDR and Yand software under W7

Yahoo group: navtexdx (2013)
Date: 2013-10-01 08:29:42 UTC
From: Dirk Claessens
Topic: 6149 Message: 6152

Hi Marc,

When you startup Yand and click on the Audio Input button, you should see the available audio sources.
As you're using Perseus, you should have VAC installed and see that in the list.
It is strange though that "Microsoft-geluidstoewijzing" is not available.

On another note: if you are usually logged in as a standard user, Yand should NOT be installed under Program Files(x86). Under W7/W8 This will give all kinds of nasty write access problems.

Change the install path to C:\Yand or whatever you prefer.

Regards - Dirk

From: <dl4ybp@...>
Topic: 6155 Message: 6155

These two were the remakable receptions together with many fragments of Cyprus Radio at different times. Astrakhan is unsure and very very early here.

73
Hans, DL4YBP

R&S EK070 + ALA1530SSB+ East---West + TrueTTY + soundcard of the microham USB interface III (usually used for ham radio PSK31 reception and transmission).

Early signs of Astrakhan?

Hi Roelof

Thanks. This is what I had below. I was curious about the data at 0208. It's funny how eyes deceive you at times. When I looked 10 minutes later, it was sitting in front of my nose. All that was missing was the P. Blah. CYPRUS..

6158. Re: [navtexdx] Hans, Luebbecke. Astrakhan (?) and Purto Rico

Yahoo group: navtexdx (2013)
Date: 2013-10-01 09:47:30 UTC
From: Dirk Claessens
Topic: 6155 Message: 6158

Hi Hans,

This looks like Astrakhan in Russian.
I found a few records in my log from 2010 containing the words VOSTOCH, VID BOLEE and SEVERO which are present in your log as well.

Regards - Dirk

6161. RE: Configuring Perseus SDR and Yand software under W7

Yahoo group: navtexdx (2013)
Date: 2013-10-01 21:25:30 UTC
From: <marc652013@...>
Topic: 6149 Message: 6161

Dirk, I will try your last suggestion. I'll reinstall it in c:\Yand.. And then give it a try.

Can you work with Yand and Perseus under W7 without installing VAC.
I heard from others that it's possible

73

Marc

---In navtexdx@yahoogroups.com, <dirk.claessens@...> wrote:

Hi Marc,

When you startup Yand and click on the Audio Input button, you should see the available audio sources.
As you're using Perseus, you should have VAC installed and see that in the list.
It is strange though that "Microsoft-geluidstoewijzing" is not available.

On another note: if you are usually logged in as a standard user, Yand should NOT be installed under Program Files(x86). Under W7/W8 This will give all kinds of nasty write access problems.

Change the install path to C:\Yand or whatever you prefer.

Regards - Dirk

Subject: [navtexdx] Configuring Perseus SDR and Yand software under W7

Hi there,

After a Laptop crash (HD Renewed) I'm reinstalling all my software again.
I've a problem with Yand which cannot communicate anymore with Perseus SDR.
Audiostream. My OS is W7.

Perseus SDR is working well.. but when I startup Yand I see the following message occure:
CANNOT OPEN AUDIO DEVICE SEE SYSTEMLOG FOR DETAILS ..

Here my systemlog:

20:08:02 SYS: startup...
20:08:02 SYS: OS version: 6.1 build 7601, Windows 7/Server 2008 R2
20:08:02 SYS: CPU's detected: 4
20:08:03 SYS: opening database...
20:08:03 DATABASE: Log table succesfully opened, 560 records
20:08:03 DATABASE: Station table succesfully opened, 197 records

```
20:08:03 SYS: directory path= C:\Program Files (x86)\YaND\YaND.ini
20:08:04 MODEM: FCenter/Shift set to: 1753/170
20:08:04 AUDIO: using device "Microsoft-geluidstoewijzing"
20:08:04 AUDIO: settings: PCM, 11025Hz, 16bit, 1024 samples/block
20:08:04 AUDIO: WaveIn format query: format not supported
error code=00000002
Er is een apparaat-id gebruikt die buiten het bereik van het systeem valt.
```

Can anyone tell me what's maybe wrong in my configuration.?

Hi Marc,

Sure you can: connect the headphone output to the mike/line input with a patch cable and select this input in Yand.

Only different logs tonight were a clear Cyprus and several Novorossiysk. Still nothing across the Atlantic. Can't get on any earlier due to my neighbor blanketing 518 khz with one of those snake (Christmas) lights that he has on his backyard shed every night. Damn annoying waiting for them to go to bed.

Hi Mike

That's nice with Baku. At that time slot I had the Greek there. At 0238 when you had VCO I had a burst of Den Helder then Malin Head. So great going with the loop.

I would say 80% of the time I have the ALA loop pointing at the USA and off the back Greece / Turkey etc. It can go months without changing.

Cheers

Dave

Hello all,

Last night at 0#:00 UTC, the Kyoto Dst all of a sudden peaked at +41
However, immediately it dropped like a stone and at 09:00 it was -36 and
going down.
The NOAA Aurora Index is 10.

After 03:00 UTC propagation from Canada vanished completely.

It will have to be seen how low the Kyoto Dst will drop; however it does
not bode well for the upcoming night!

Hi Dave,

Thanks. The directional properties of the loop at night time are interesting and not quite as expected. Roelof and Dirk have done some good work looking at this recently.
My results last night show reception at more or less 360 degs but somewhere at N/S there is probably a very sharp null which could be useful when I get a remote rotator installed to turn the loop and indicate direction.

Cheers,
Mike

Subject: RE: [navtexdx] Navtex log from Whitley Bay, ENG

Hi Mike

That’s nice with Baku. At that time slot I had the Greek there. At 0238 when you had VCO I had a burst of Den Helder then Malin Head. So great going with the loop.

I would say 80% of the time I have the ALA loop pointing at the USA and off the back Greece / Turkey etc. It can go months without changing.

Cheers
Dave

Subject: [navtexdx] Navtex log from Whitley Bay, ENG

Hello All,

I changed antenna last night to my 4m Loop and either I got lucky with conditions and or the loop is doing a good job.
Baku received again.

6170. Yand: update Portuguese stations

Yahoo group: navtexdx (2013)
Date: 2013-10-02 13:45:54 UTC
From: Dirk Claessens
Topic: 6170 Message: 6170

Hi all,

Update available here:

<http://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder>

-Horta > Sao Miguel
-Monsanto > Penalva
-Porto Santo keywords
-some keywords added.

Remember: For full import of station data AND keywords: UNCHECK "only import station data"

if you want to keep your OWN keywords, CHECK "only import station data".

Regards - Dirk

From " THE TWO BUOYS..... " down, this is definitely from

CYPRUS !

This was the second " message " I have had from Muscat, the first,

a couple of night ago, was worse than this !!

Regards

Bob

Hi Dirk,
Many thanks for your update.
I had to delete the (1) in file name to get it into the Database, probably I should have known but maybe somebody else may find my experience useful.
Thanks also for including BAKU!
73,
Mike

Subject: [navtexdx] Yand: update Portuguese stations

Hi all,

Update available here:

<http://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder>

-Horta > Sao Miguel
-Monsanto > Penalva
-Porto Santo keywords
-some keywords added.

Remember: For full import of station data AND keywords: UNCHECK "only import station data"

if you want to keep your OWN keywords, CHECK "only import station data".

Regards - Dirk

6173. The station V5W518 at Walvis Bay on 518 kHz slot B is OFF.

From: Mauricio Molano Sánchez
Topic: 6173 Message: 6173

The station V5W518 at Walvis Bay on 518 kHz slot B is OFF:

MSI Self Assessment – NAVAREA VII
Submitted by: South Africa
26 August 2013

"NAVTEX coverage out to 200 nm from the Namibian and South African Coasts is passed from the Coast Radio
Stations at Cape Town (C), Port Elizabeth (I) and Durban (O).The Coast Radio Station at Walvis Bay, Namibia
(B) NAVTEX service is not operational. Whilst the Namibian NAVTEX service is out of operation, Cape
Town Radio will continue to include Namibian Maritime Safety Information with its scheduled NAVTEX and SafetyNET MSI broadcasts."

Hi Mike,

Strange. I just checked and the filename is yand_stations.txt, as it should be.
But, I have deleted/saved the file twice this afternoon because of something I had forgotten to include. I'm guessing that Yahoo keeps a temporary copy yand_stations(1).txt or some such??

Hi all,

What's happening to propagation?
I logged 3 complete messages from Muscat,OMA.
In september/october alone I logged more from Muscat than in the 5 previous years!
Or is it the loop? I dunno...

Regards - Dirk

Hello Dirk,

Last night was special.
Due to a Proton Event, propagation from signals from the north suffered
from a very high attenuation.
Last week I received on the loop Talinn, Archangelsk and Bodo very well.
Last night nothing from these stations was found on the loop and only
Talinn was received on the mini-whip.
Even Grindavik was only logged on the mini-whip and just once!
As long as I have been using the loop, Grindavik has never gone missing!

Regarding Muscat, I also received three messages.
Maybe your loop is attenuating Jeloya from Norway a bit and the lack of
propagation did the rest.
It should be interesting if you could place Jeloya in the null of the
loop, once conditions have been restored to normal.

Regarding loop versus mini-whip, at first glance, the loop produces better
decodes, but it is rare to find a station on the loop that does not appear
on the mini-whip as well. The reverse is true, but due to the directivity
of the loop, this is to be expected. It should be also interesting to use
two reception systems; each with its own loop, one N/S and the other E/W!

Hi Roelof,

You're right, as always :0)

- I can confirm that - under normal conditions - the loop here captures excellent decodes from Talinn, Archangelsk and Bodo.
- Indeed, last night this was not the case: even Torshavn was garbled here and from Grindavik I could only catched fragments in the 03:50 time slot.
- Propagation must have been exceptional, let's hope it stays. 2012 was awful.

Woken to a bit of thunder at 7am so no surprise to see a lot of junk in the logs. Some nice clean copies of Astrakhan.

I cannot get my Navtex going until after midnight. The guy with his sausage / Christmas light is staying up later. Blankets 516 - 520 khz. Wish I knew how to deal with that. Sabotage or looking for a new power pack for him. Where does one find a NON RF offending pack?

6187. Log Lübbecke: Hardly anything from North

Yahoo group: navtexdx (2013)
Date: 2013-10-04 08:16:04 UTC
From: <dl4ybp@...>
Topic: 6187 Message: 6187

here too. Also the Italian stations were weaker than usual. And the same with Iceland. Remarkable here are fragments of San Juan again. My few logs begin with an Unid. My vague guess would hint at Odessa.

Loop / miniwhip: In addition to what has been said I would like to add that, from a DXer's point of view, a loop may help to weaken stations from certain directions and help to receive the wanted stations. As it is easier to 'null out' stations during daylight hours and longrange propagation happens in the dark, this may get difficult and may be a real challenge.

73
Hans, DL4YBP

Unid.

Immediately after Netherlands Coastguard and followed by Malin Head.

Possibly Odessa?

Good going Dirk

Frustrating for me that this twirp next door has this sausage light on at that time. Otherwise I'd be in the park for it as well. I really like Roelof's loop and seeing your results.

73

Dave

Hi Dave,

A well isolated flat pliers comes to mind, just to give a little crush. :0)

Hello all,

The band is recovering already.
I even found VON, St. Johns!

Daily log:

20131003 1951 518 $03X EAV Valencia,ESP 1497

Hi Dirk, I have uninstalled the VAC now and I'm listening via a patch cable: headphone out <-> line in.
I think it's working well now. But I want to make it in such a way that I still can hear the signals from Perseus also (Monitoring) so I'll to fix loudspeaker with a connector or something .. But's that is not a big problem.
thnks for tips.

Can you work with Yand and Perseus under W7 without installing VAC.
I heard from others that it's possible

Hi Marc,

Sure you can: connect the headphone output to the mike/line input with a patch cable and select this input in Yand.

Regards - Dirk
